# INTRODUCTION

From golf course to booming urban center, the City of Doral has progressed immensely in a very short time. Incorporated in 2003, Doral is now one of the major employment centers and a leisure destination within Miami-Dade County. With a burgeoning downtown and growing population, the City recognized the need to increase mobility options through more efficient public transportation. Therefore, in 2008, the City initiated a two-year pilot program to run an intra-city circulator. With a free and convenient service, this program soon became popular. The Doral Transit System (DTS) has grown to four circulator routes connecting major destinations such as the Palmetto Metrorail Station, Miami-Dade College West, Dolphin Mall, Miami International Mall, and the Florida International University's (FIU's) Engineering and Modesto A. Maidique campuses.

# HISTORICAL CONTEXT

Hinged around the visionary development of Alfred and Doris Kaskel, the City of Doral transformed from a vacant plain of wetlands and limestone into a modern suburban community. Open in 1962, the Doral Country Club featured three golf courses that imported guests from an accompanying hotel in Miami Beach. Named after a combination of Doris and Alfred, the country clubs popularity became the catalyst for residential growth as the Kaskel family began developing the Doral Estates and Doral Park communities during the 1980s. Confronting environmental and regulatory challenges, growth boomed in 1989 with the formation of the West Dade Federation of Homeowner Associations which helped create the City's first civil services.

The City's growth also benefited from surrounding infrastructure such as Miami International Airport (MIA). With nonstop flight services expanding west beyond St. Louis and New Orleans, and transatlantic flights to Europe beginning operations during the 1970, Miami began its transformation into a major hub for the aeronautical industry. With Air Florida establishing the first hub in the early 1980s, followed by American Airlines in the early 1990s, MIA is now one of the country's largest air freight and international passenger ports.

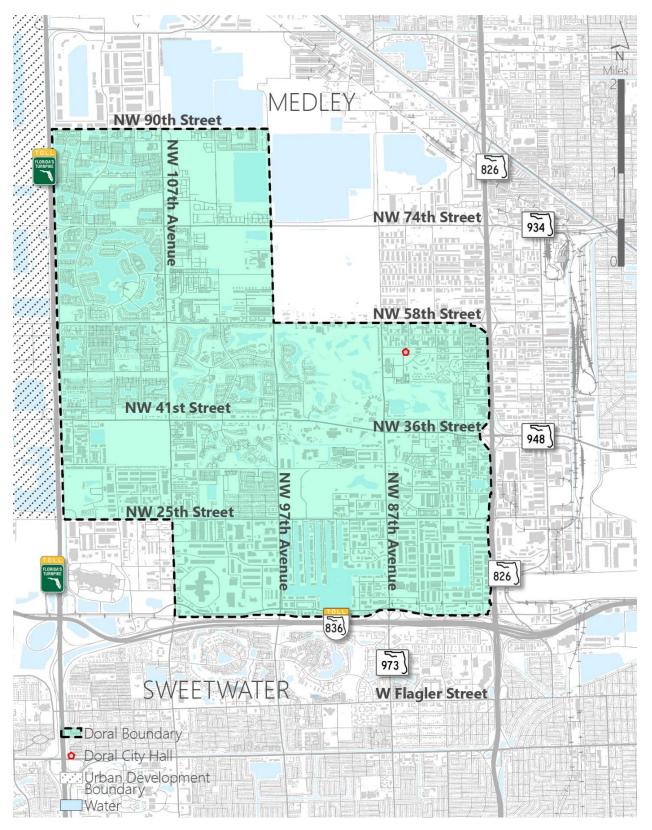

Figure 1: City of Doral Municipal Boundary

In addition to the airport, major roadways developed during the early history of Doral which fueled its growth. With the completion of the Palmetto Bypass Expressway in June 1961, Doral was accessible from SR 948/NW 36th Street which connected with the Florida's Turnpike at the Golden Glades Interchange. Six months after the opening of SR 826, the Airport Expressway opened, connecting Doral with Miami Beach and MIA. As the City grew, it soon overwhelmed the Palmetto Expressway, creating the need for a "bypass to the bypass". Hence, on the western boundary of the City the Homestead Extension of the Florida's Turnpike (HEFT) began its ultimate development with the 1973 mainline connecting the Golden Glades Interchange with US 27/Okeechobee Road. The last section of the HEFT was opened in 1974 connecting Florida City to US 1.

These events placed Doral squarely in central Miami-Dade County with significant international, national, and regional connectivity. Since incorporation in 2003, the City's population has grown from roughly 21,000 residents to 61,000 in 2017. Given its proximity to MIA, the City hosts over 3,000 logistics-related companied, over 250 company headquarters, and 14 business parks. With over 2 million square feet of approved commercial developments, and 9,000 approved residential units, the City is a major business and residential community within the County. Most recently, the City has begun promoting a 120-acre downtown master plan to complete its transformation into a true live, work, and play community.

## STUDY PURPOSE

With the understanding that sustainable growth requires diverse transportation solutions that are nimble to change, this study aims to analyze and evaluate the existing DTS to recommend modification, enhancement, and/or expansion solutions to better serve the target travel market over the short-, medium-, and long-term. This study also aims to define the target travel market and connect the DTS with other existing and planned municipal, County, and regional transit services. This purpose will be accomplished through meeting the following objectives:

- Address Title VI of the Civil Rights Act of 1964 regarding nondiscriminatory transportation for all customers and potential customers of the DTS
- Integrate the Strategic Miami Area Rapid Transit (SMART) Plan and University Transit Management Association (UTMA) services with the DTS
- Develop a comprehensive design guideline for transit stop infrastructure and amenities

Figure 2: Doral Country Club (1960s)

Figure 3: Miami International Airport (1970s)

Figure 4: SR 112/Airport Expressway (1970s)

## STUDY NEED

S

Miami-Dade County approved in 2002 a half penny local surtax with the purpose of constructing the People's Transportation Plan (PTP). This plan intended to bring premium transit services to the County. In 2016, the County's Transportation Planning Organization (TPO) voted unanimously to advance six of the PTP's rapid transit corridors. This new development of the PTP has been labeled the SMART Plan and includes a network of Bus Express Rapid Transit (BERT) service in addition to the rapid transit corridors. This renewed effort to implement mass transit in the County comes at a crucial time when Florida has become the third most populous state, with Miami-Dade being the most populous county and part of the country's fourth largest urbanized metro area.

The County's growth is exacerbating the need for mobility options as congestion becomes more widespread and intense throughout the thirty-four municipalities and unincorporated areas of Miami-Dade. The Federal Highway Administration (FHWA) estimates the annual cost of congestion to motorists in urban areas at approximately \$7 billion. Not only those congestion represents a significant cost and economic disadvantage to the citizens of Miami-Dade, it also hinders the County's ability to keep growing and enhancing the well-being of its residents.

Therefore, the County has devised a strategy around the SMART Plan's six premium corridors serving as the main options for regional and national mobility. Hence, this strategy requires local services to provide short-to-medium distance trips to feed riders into the primary corridors and to mobilize customers locally. This is where systems such as the DTS have been established to support the County's Metrobus system. By enhancing the local circulators, services can be connected, coordinated, and synchronized to function as an efficient distribution network.

5

# STUDY SCOPE

This study begins with an analysis of the existing transit system. This analysis looks at current transit services and operations, planned improvements, City demographics, and environmental conditions with the intention of understanding how well the current transit systems performs in meeting the City's needs. This requires an understanding of travel markets within the City and how commuter, student, business, and leisure trips interact.

After analyzing the existing conditions, this study focuses on peer systems to compare conditions, infrastructure, and operations. These insights will aid in developing infrastructure guidelines and transit strategy alternatives that improve the existing transit system. These strategies will detail supporting pedestrian and bicycle environments, transit infrastructure, and transit operations that are fully integrated with future mobility options and adjacent land uses. These alternatives will then be evaluated to determine associated benefits and tradeoffs. One alternative will be recommended for implementation with an accompanying action plan.

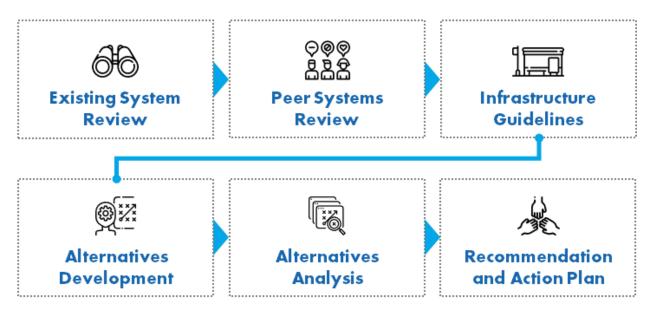

Figure 5: Study Scope

# LITERATURE REVIEW

Before delving into the Existing System Review a comprehensive literature review was performed to understand the context of ongoing and planned improvements within the City of Doral and its surroundings. **Table 1** identifies the documents reviewed. These documents contain everything from specific corridor recommendations to regionwide work programs and master plans listing current and future projects.

# MIAMI-DADE TPO

## 2040 LRTP

The Miami-Dade TPO's 2040 LRTP is intended to assist stakeholders, citizens, community leaders, businesses, and elected officials in achieving the County's transportation vision through 2040. The LRTP serves as a tool to identify needed improvements to the transportation network and provides a long-term investment framework to address current and future challenges.

#### SMART Plan

A big component of the 2040 LRTP is the SMART Plan. To ensure the selection of the most suitable technology, two major activities are ongoing as part of the planning and visioning process of the SMART Plan. These activities include:

- Land Use and Visioning studies headed by the TPO
- Project Development and Environmental (PD&E) Studies headed by FDOT and Miami-Dade DTPW

Corridor	From	То	Locally Preferred Alternative Selection (LAP) Date
Beach Corridor	Midtown Miami	Miami Beach Convention Center	August 2018
East-West Corridor	Miami Intermodal Center (MIC)	Florida International University	December 2018
Kendall Corridor	Dadeland Area Metrorail Stations	Krome Avenue	Summer 2019
North Corridor	Martin L. King, Jr. Metrorail Station	NW 215 <sup>th</sup> Street	Summer 2019
Northeast Corridor	Downtown Miami	City of Aventura	Fall 2019
South Dade Transitway	Dadeland South Metrorail Station	SW 344 <sup>th</sup> Street Transit Terminal (Florida City)	Fall 2019

#### Table 2: SMART Plan Rapid Transit Corridors

Corridor	Description		
	North – Miami Beach Convention Center to Golden Glades via I-95		
Beach Express	Central – Miami Beach Convention Center to Civic Center via Julia Tuttle Causeway		
	South – Miami Beach Convention Center to Downtown Miami via MacArthur Causeway		
Flagler Corridor	Downtown Miami to West Dade via Flagler Street		
Florida's Turnpike	North – Dolphin Station to North Miami-Dade via the HEFT		
Express	South – Dolphin Station to SW 344th Street via the HEFT		
Northwest Miami-Dade	Palmetto Metrorail Station to Miami Gardens Drive Park-n-Ride via		
Express	Palmetto Expressway and I-75		
South Miami-Dade	Dadeland North Metrorail Station to southern Miami-Dade County via		
Express	SR-878, SR-874, and Florida's Turnpike		
Southwest Miami-Dade Express	Dadeland North Metrorail Station to Miami Executive Airport via SR-878 and SR-874		

#### Table 3: SMART Plan BERT Corridors

Four corridors are of particular interest due to their potential interface with the DTS. These corridors are:

- 6
- Rapid Transit
  - East-West Corridor
- BERT
  - Flagler Corridor
  - Florida's Turnpike Express
  - Northwest Miami-Dade Express

There are no ongoing studies for the Florida's Turnpike Express and Northwest Miami-Dade Express BERT Corridors.

#### East-West Corridor

This rapid transit corridor is envisioned to run along SR 836/Dolphin Expressway from the MIC to the Panther Station in SW 8<sup>th</sup> Street and SW 109<sup>th</sup> Avenue, next to the FIU Modesto A. Maidique campus. The ongoing PD&E study is evaluating alignment alternatives as well as the location and design of transit stations and Park-and-Ride transit terminals. The first phase of the evaluation explored Bus Rapid Transit (BRT), Heavy Rail Transit (HRT), and Commuter Rail Transit (CRT) as alternative modes of transportation. From this phase, only the BRT and HRT alternatives advanced for further consideration. Currently, the second phase of the study is ongoing to select the LPA.

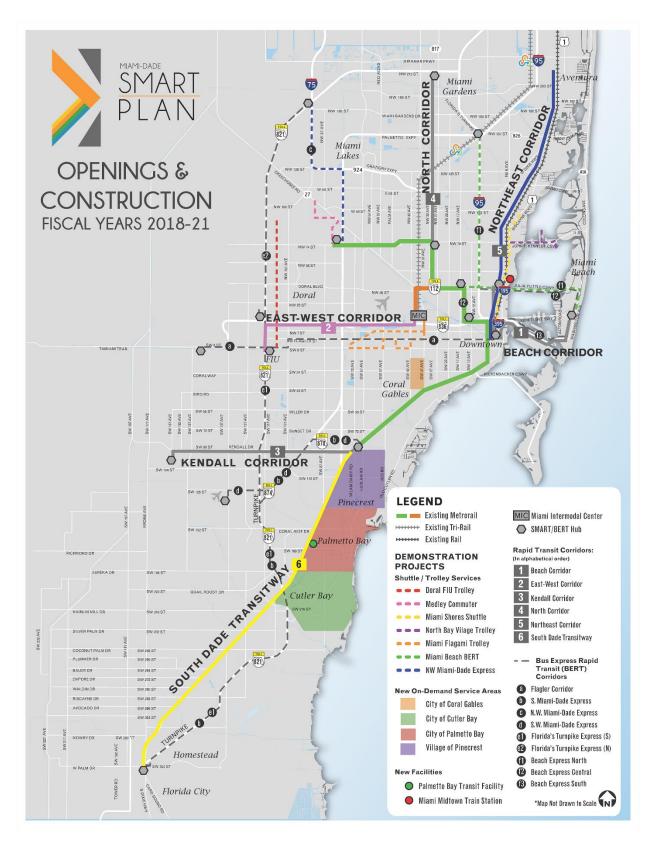

Figure 6: SMART Plan Map

Moreover, the first hub for this corridor broke ground in January 2017. This hub is located on NW 12<sup>th</sup> Street and NW 122<sup>nd</sup> Avenue, just west of the HEFT, and is called the Dolphin Station Park-and-Ride Transit Terminal Facility. Two other hubs have already been identified and will soon commence construction. These hubs are the Panther Station at FIU and the Tamiami Station, which will be located at the corner of SW 8<sup>th</sup> Street and SW 147<sup>th</sup> Avenue.

#### Flagler Corridor BERT

FDOT is conducting the Flagler PD&E Study. This BERT corridor covers from approximately the HEFT to the Downtown Multimodal Terminal in NW 1<sup>st</sup> Avenue. The proposed corridor also includes a segment of SW 8<sup>th</sup> Street from SW 147<sup>th</sup> Avenue to SW 107<sup>th</sup> Avenue, SW 107<sup>th</sup> Avenue from SW 8<sup>th</sup> Street to NW 12<sup>th</sup> Street, and NW 12<sup>th</sup> Street from approximately NW 122<sup>nd</sup> Avenue to NW 107<sup>th</sup> Avenue. The PD&E Study is considering three alternatives, Business Access and Transit (BAT) Lanes, Exclusive Left Lane BRT Separated by Traffic, and an Exclusive Left Lane BRT

Figure 7: Flagler Corridor BERT Map

#### Other Projects

Table 4 through lists all other projects in the 2040 LRTP that are near or within the City of Doral.

Priority	Project	Roadway	le 4: 2040 LRTP Projects Limits	Project Description
	1	NW 74 <sup>th</sup> St.	HEFT to SR 826	Add 2 lanes and reconstruct
	2	NW 97 <sup>th</sup> Ave.	NW 70 <sup>th</sup> St. to NW 74 <sup>th</sup> St.	New 4 lane road
	2			reconstruction
	3	NW 97 <sup>th</sup> Ave.	NW 58 <sup>th</sup> St. to NW 70 <sup>th</sup> St.	Add 2 lanes and reconstruct
	4	HEFT	SR 826 to NW 106 <sup>th</sup> St.	Add lanes and reconstruct
1		SR 826 & SR 836	North of SW 8 <sup>th</sup> St./NW	Interchange improvements
(2015 –	5		87 <sup>th</sup> Ave. to south of 25 <sup>th</sup>	
2020)			St./NW 57 <sup>th</sup> Ave.	
	6	SR 836	NW 107 <sup>th</sup> Ave.	Construction of access
				ramp
	_	SR 836	SR 836 West of 82 <sup>nd</sup> Ave.	Interchange improvements
	7	Interchange at	to NW 97 <sup>th</sup> Ave.	
	0	87 <sup>th</sup> Ave. NW 107 <sup>th</sup> Ave.		Add 2 lange and reconstruct
	8	NW 107 <sup>th</sup> Ave.	NW 41 <sup>st</sup> St. to NW 25 <sup>th</sup> St. NW 12 <sup>th</sup> St. to NW 74 <sup>th</sup> St.	Add 2 lanes and reconstruct
	9	NVV 107 <sup>th</sup> Ave.	NVV 12" St. to NVV 74" St.	Operational and capacity improvements where
	9			feasible
		NW 117 <sup>th</sup> Ave.	NW 25 <sup>th</sup> St. to NW 41 <sup>st</sup> St.	New 2 lane road to support
2	10			the flow of truck traffic to
(2021 –				HEFT
2025)	11	NW 12 <sup>th</sup> St.	NW 107 <sup>th</sup> Ave. to SR 826	Widening
	10	NW 25 <sup>th</sup> St.	NW 89 <sup>th</sup> Ct. to SR 821	Capacity and operational
	12			improvements
	13	NW 79 <sup>th</sup> Ave.	NW 48 <sup>th</sup> Way to NW 36 <sup>th</sup>	Merge and reduce access
	15		St.	points if possible
	14	NW 36 <sup>th</sup> St./NW	NW 42 <sup>nd</sup> Ave. to HEFT	Operational improvements
3	17	41 <sup>st</sup> St.		
(2026 –	15	NW 58 <sup>th</sup> St.	NW 107 <sup>th</sup> Ave. to NW 82 <sup>nd</sup>	Corridor traffic operational
2030)			Ave.	improvements
,	16	SR 836 Managed	HEFT to SR 826/SR 836	2 new managed lanes
		Lanes	Interchange	
	17	NW 97 <sup>th</sup> Ave.	NW 58 <sup>th</sup> St. to NW 52 <sup>nd</sup> St.	Add 2 lanes and reconstruct
4	10	HEFT	NW 12 <sup>th</sup> St. to NW 74 <sup>th</sup> St.	Transportation Systems
(2031 –	18			Management and
2040)	10	SD 936		Operations (TSM&O)
	19	SR 826	SR 836 to NW 103 <sup>rd</sup> St.	Add 4 special use lanes

Project	Roadway	Limits	Project Description
1	NW 90 <sup>th</sup> St.	NW 107 <sup>th</sup> Ave. to NW 87 <sup>th</sup> Ave.	New 4 lane road construction
2	NW 97 <sup>th</sup> Ave.	NW 74 <sup>th</sup> St. to NW 90 <sup>th</sup> St.	New 4 lane road construction

### 2019 TIP

The TIP is a subset of the LRTP that highlights the projects planned within the first five years (Priority 1). The TIP is split into six different improvement categories: intermodal, highway, transit, aviation, seaport and non-motorized improvements. The first year of the TIP is comprises of projects that are fully funded while the remaining four years comprises of unfunded high priority projects for which capital funding outlay must be considered. **Table 7** lists funded projects within the City of Doral. **Table 8** lists funded projects within the influence area of the East-West Corridor.

#### Table 7: TIP Funded Projects

Project	Roadway	Limits	Agency	<b>Project Description</b>
	NW 87 <sup>th</sup> Ave.	From NW 74 <sup>th</sup>	City of	New Road
DT4056153		St. to NW 103 <sup>rd</sup>	Doral	Construction
		St.		
DT4408471	Citywide sidewalk, curb ramp,		City of	Sidewalk
D14406471	and crosswalk improvements		Doral	
DT4416421	Bicycle and pedestrian bridge		City of	Pedestrian/wildlife
D14410421	over Doral Blvd.		Doral	overpass

Project	Roadway	Limits	Agency	<b>Project Description</b>
TP4355451	HEFT	From SR 836 (MP 26) to NW 74 <sup>th</sup> St. (MP 31)	Florida Turnpike Enterprise (FTE)	Add lanes & reconstruct
PW000851	NW 107 <sup>th</sup> Ave.	NW 12 <sup>th</sup> St. to NW 25 <sup>th</sup> St.	DTPW	Resurfacing
PW000853	NW 107 <sup>th</sup> Ave. and NW 12 <sup>th</sup> St.		DTPW	Intersection Improvement
TA000105	Dolphin Station at HEFT and NW 12 <sup>th</sup> St.		DTPW	Transit Center with Park-and-Ride lot
XA50001	Dolphin Station Park-and-Ride		Miami-Dade Expressway Authority (MDX)	Parking Facility

Table 8: Funded Projects within 1/2 Mile Vicinity of East-West Corridor

## 2040 BICYCLE/PEDESTRIAN PLAN

The 2040 Bicycle/Pedestrian Plan serves as the non-motorized element of the 2040 LRTP and presents a vision to enhance the transportation network of Miami-Dade County. The plan analyzes the bicycle and pedestrian Level of Service (LOS) on major arterials and highlights several showcase projects for the Greenways and Trails Network. Among these projects is the Atlantic Trail, Rickenbacker Causeway, Biscayne Boulevard, Flagler Trail, Ludlam Trail, and several others.

The Bicycle and Pedestrian Plan includes a bicycle needs assessment to identify facilities that should be more bicycle friendly. The evaluation criteria used for the assessment are:

- Operations and Safety (LOS and Crash Data)
- Connectivity (Existing Facilities and Missing Gaps)
- Local Support (Funding)
- Cost Feasibility (Right-of-Way Availability)

Project Type	Roadway	Limits	Length (Miles)
On-Road Bicycle Facility	NW 87 <sup>th</sup> Ave.	From NW 74 <sup>th</sup> St. to	1.87
Improvements		NW 103 <sup>rd</sup> St.	1.07
On-Road Bicycle Facility	NW 97 <sup>th</sup> Ave.	NW 74 <sup>th</sup> St. to NW	1 0 2 0
Improvements		58 <sup>th</sup> St.	1.029

Table 9: 2040 LRTP Funded Bicycle and Pedestrian Projects

4

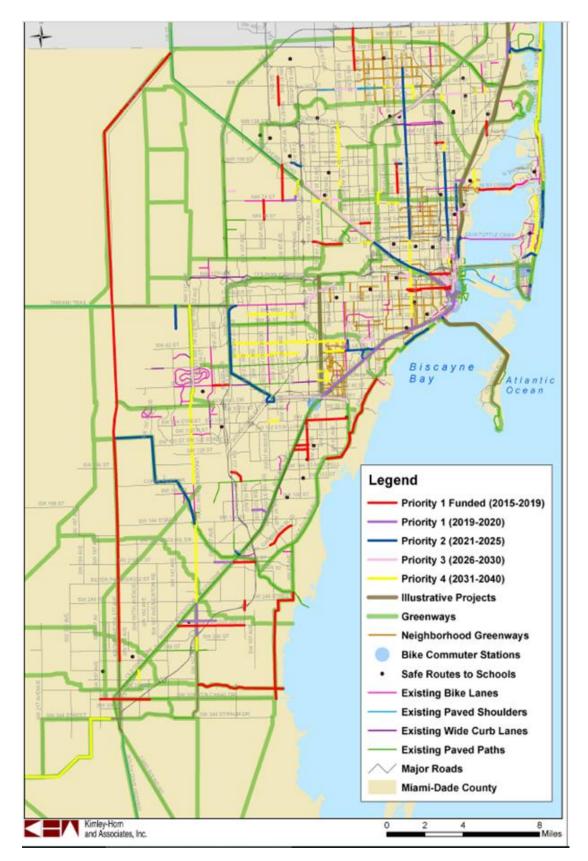

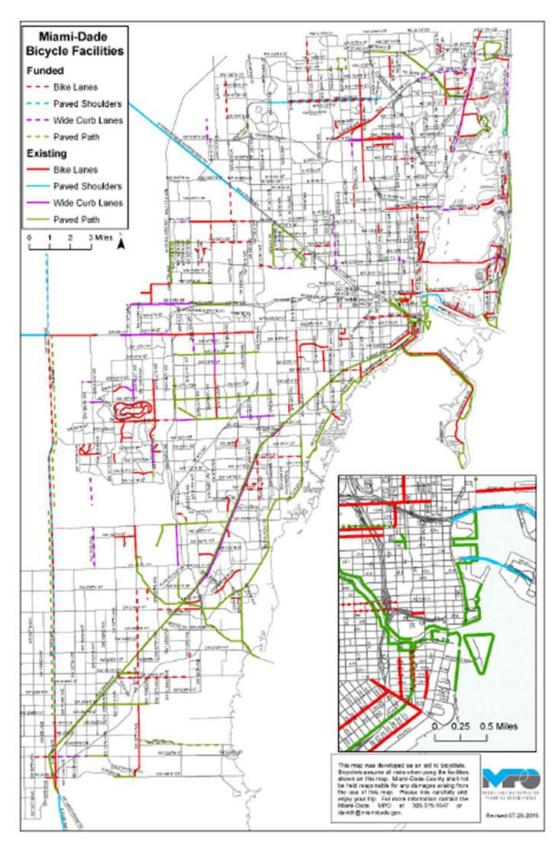

Figure 8: 2040 Bicycle/Pedestrian Plan Proposed Projects

*Figure 9: 2016 Existing and Future Bicycle Facilities in Miami-Dade County* 

## NON-MOTORIZED NETWORK CONNECTIVITY PLAN

The Non-motorized Mobility Network Connectivity Plan presents a vision for enhancing nonmotorized transportation mobility and accessibility in Miami-Dade County to connect the county's cities, neighborhoods, key destinations, and existing infrastructure investments. The plan identified a preliminary list of fourteen potential projects, of which six were selected for further study and are listed below:

- Miami Gardens connection to the Golden Glades Tri-Rail Station;
- Snake Creel Trail extension to Unity Station (NW 27<sup>th</sup> Avenue) and NW 199<sup>th</sup> Street BRT Stations;
- Snake Creek Trail extension to Greynolds Park and Sunny Isles Causeway;
- Coral Way shared use path connection to A.D. "Doug" Barnes Park and Tropical Park;
- Commodore Trail connection to the Rickenbacker Causeway; and
- Miami Springs and Medley connection to Okeechobee Metrorail Station.

Of note are the relevant additional projects that were identified as key gaps in the nonmotorized network but were not selected for future study. These projects included the Kitty Roedel Trail Connection to Doral Turnpike Trail. Not only would this proposed project provide a connection to the Dolphin Station Park-and-Ride but would also close the gap between the Kitty Roedel Trail on NW 12<sup>th</sup> Street and the Doral Turnpike Trail.

## PROTECTED BICYCLE LANES DEMONSTRATION PROJECT

The primary objective of the Protected Bicycle Lanes Demonstration Plan is to provide Miami-Dade County with two protected bicycle lane concept designs that are fit for fast-track demonstration project implementation. The plan also focuses on identifying demonstrationfriendly segments that possess most of the following attributes:

- Connectivity to the SMART plan and transit,
- Low Annual Average Daily Traffic (AADT),
- Low Volume to Capacity (V/C) ratios,
- Ample Right-of-Way (ROW),
- Existing on-street parking,
- Existing bike facilities, and
- Connectivity to numerous destinations.

Background research was conducted on current Miami-area protected/separated bike-lane projects and a Study Advisory Committee was formed that comprised of municipal agency stakeholders who represented public works, bicycle and pedestrian planning, parks and

recreation, parking authority, downtown development authority, and others. This committee analyzed and reviewed the research collected and provided advisement for potential protected bicycle lane segments, of which none fall within the City of Doral. The two characteristics that are crucial in future efforts to build protected bicycle lane segments are safety and network connectivity. It is essential that any potential locations do not have any restraints that would affect these criteria.

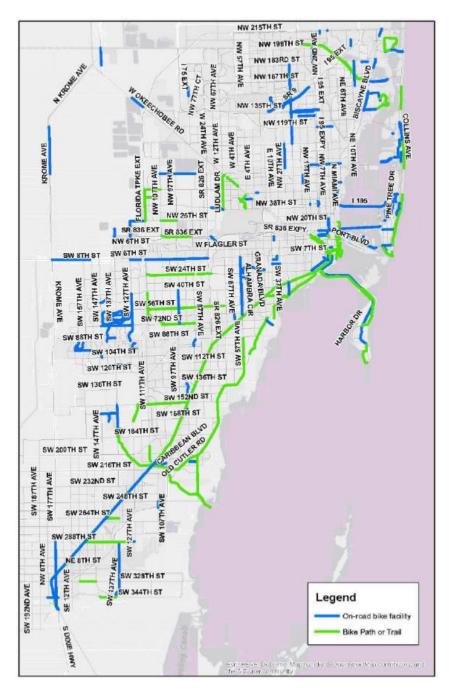

Figure 10: 2017 Existing Bicycle Facilities in Miami-Dade County

# **FDOT** 2019 STIP

The STIP is designed to be a multi-year, statewide intermodal program of transportation projects, consistent with the statewide transportation plan and planning processes. This includes metropolitan plans, TIPs, and planning processes. The following FDOT projects are fully funded and planned within the next five years (FY 2017/2018 - 2020/21).

Item #	Project Description	Type of Work	Fiscal Year Funded
432410 - 1	NW 52 <sup>nd</sup> St./NW 107 <sup>th</sup> Ave. and NW 102 <sup>nd</sup> Ave./NW 41 <sup>st</sup> St. to NW 58 <sup>th</sup> St.	Bike Lane/Sidewalk	2019 and prior
440838 - 1	City of Doral – Bike/Pedestrian Shared Use Path Canal Bank Stabilization and Improvement	Bike Path/Trail	2019
440847 - 1	City of Doral – Citywide Sidewalk, Curb Ramp, and Crosswalk Improvements	Sidewalk	2019
441642 - 1	City of Doral – Bicycle/Pedestrian Bridge over Doral Blvd.	Pedestrian/Wildlife Overpass	2020 & 2022

## 2019 WORK PROGRAM

The Work Program is a five-year planned developed and maintained to maximize the department's production and service capabilities. The work program prioritizes the innovative use of resources, increased productivity, reduced cost, and strengthened organizational effectiveness and efficiency. Figure 11 through Figure 14 illustrate all the projects within the 2019 Work Program. Table 11 lists the projects within or adjacent to the City of Doral.

Item #	Project Description	Type of Work	Fiscal Year Funded	
44162 - 1	City of Doral – Bicycle/Pedestrian Bridge	Pedestrian/wildlife	2020 & 2022

## Doral Subarea Freight Mobility Improvement Plan

This study is the fourth installment in a series of subarea studies conducted by FDOT to understand freight mobility needs throughout the County. The study performed data collection, analysis of freight movements, analysis of roadway system impacts, and traffic engineer analysis to develop specific recommendations that benefit freight. **Table 12** documents the recommendations provided within this study.

			located west of HEFT and south of NW 114 <sup>th</sup> St.
	N/A	N/A	Coordinate with the City of Doral's Traffic Relief
Othern			Plan which is implementing strategies to
Other			manage and alleviate traffic congestion on
			short-, mid-, and long-term timeframes.
	N/A	N/A	Coordinate with the City of Doral to improve
Other			freight mobility through the use of Smart City
Other			strategies. These digital strategies could be used
			to better understand freight movement as well.
	N/A	N/A	Freight bottlenecks were identified for the PM
			Peaks on a Wednesday at SR 826 NB between
			NW 12 <sup>th</sup> St. and NW S. River Dr./Okeechobee
			Rd., SR 826 SB between NW 74 <sup>th</sup> St. and NW 25 <sup>th</sup>
Other			St., and Okeechobee Rd. NB between NW 74 <sup>th</sup>
			St. and SR 826. Consider performing a more
			comprehensive bottleneck analysis study and
			determining potential improvements for
			identified locations.
	N/A	N/A	Evaluation of WIM Data revealed that some
	(Enforcement)		truckers were overweight and speeding. As the
			City has four posted "No Thru Truck" zones
			which are strictly enforced, similar enforcement
			could be extended to trucks that are overweight
Other			or speeding. This enforcement could be done at
			a WIM station similar to the one on the
			Turnpike, equipped with cameras with optical
			character recognition to identify, sort and screen
			commercial motor vehicles for enforcement
			action should its weight exceed Federal or Doral
			regulations.

## Medley Subarea Freight Mobility Improvement Plan

Similar to the Doral study, FDOT conducted a freight mobility analysis of the Town of Medley. Being the first installment in the series, this study documents important recommendations that affect Doral and its context on the northern boundary. **Table 16**Table 12 documents the recommendations provided within this study.

Term	Corridor	Limits	Project Description
Short	NW 121 <sup>st</sup>	S. River Dr. to	Resurfacing to fix potholes/slippery pavement
	Way	NW 102 <sup>nd</sup> Rd.	when wet.
Short	NW 138 <sup>th</sup> St.	At NW 115 <sup>th</sup>	Resurfacing to fix flood retention issues during
		Ave.	raining conditions.

## Table 18: Medley Subarea Freight Mobility Improvement Plan Long-Term Recommendations

# Miami-Dade DTPW

# 2028 Transit Development Plan

The Transit Development Plan is aimed at evaluating the County's existing transit systems and prioritizing areas that require improvements. This plan documents DTPW's visions, goals, and strategies for the next ten years and achievements from the previous fiscal year. The plan lists all transit projects by order of priority between 2019 and 2028. **Table 19** through **Table 21** list the projects within or near Doral.

Project Name	Limits	Project Description
NW 12 <sup>th</sup> St.	Along NW 12 <sup>th</sup> St.	This project includes widening and resurfacing
Roadway	between NW 122 <sup>nd</sup> Ave.	along NW 12th Street to add bus-only lanes
Improvements (Bus-	and NW 114 <sup>th</sup> Ave.	from NW 122nd Avenue to NW 114th Avenue.
Only) Project for		These new bus-only lanes will allow buses to
Dolphin Station		bypass traffic congestion along this segment of
		NW 12th Street and will thereby reduce travel
		time for buses traveling between the Dolphin
		Station Park-and-Ride/Transit Terminal and
		Dolphin Mall. This roadway project is an integral
		component of the Dolphin Station Park-and-
		Ride/Transit Terminal Facility. The Dolphin
		Station Park-and-Ride/Transit Terminal Facility is
		part of the East West Corridor Rapid Transit
		Project which connects the largest employment
		areas of Miami-Dade County (Florida
		International University (FIU), City of Doral,
		Miami International Airport (MIA), Miami Health
		District, Downtown Miami and Brickell). The East
		West Corridor Rapid Transit Project will also
		connect to the Miami Intermodal Center (MIC) –
		the County's major ground transportation hub.
SR 836 Express Bus	From the Tamiami	A Line Express would provide premium express
A Line Express	Station (SW 8 <sup>th</sup> St. and	transit service along SR 836, SW 8 <sup>th</sup> Street, and
	SW 147 <sup>th</sup> Ave.) to the	SW 137 <sup>th</sup> Avenue. This route will operate during
	proposed Downtown	peak periods only. Service headways will be 10
	Miami Intermodal	minutes during the AM/PM peak hours. Service
	Terminal (NW 1 <sup>st</sup> St. and	hours are weekdays 6:00 AM to 9:00 AM and
	NW 1 <sup>st</sup> Ave.)	3:00 PM to 7:00 PM. DTPW is coordinating with
		MDX to potentially operate this service. This
		project will include the addition of ten new
		articulated buses.

#### Table 19: Miami-Dade DTPW Funded Transit Projects FY 2019 – 2028

Project Name	Limits	Project Description
Palmetto Intermodal Terminal (Phase 1)	SR 826 at NW 74 <sup>th</sup> St.	Purchase of an approximately 11.9 acres semi-vacant parcel of land located immediately south of the Palmetto Metrorail Station for the purpose of constructing the Palmetto Intermodal Terminal. A second phase of the project will include the design and construction of the Palmetto Intermodal Terminal.
East-West Corridor	MIA west along the SR 836 to the HEFT in the vicinity of FIU	This project will provide multimodal solutions for severe traffic congestion along SR 836, the only east-west expressway in central Miami-Dade County. This project will also serve major activity centers including FIU, MIA, the MIC, Downtown Miami, and PortMiami, while transporting riders to and from major employment areas (Doral, Health District, Central Business District, Brickell, etc.). The East-West Corridor is being studied as part of the Strategic Miami Area Rapid Transit, or SMART Plan.

## Table 20: Miami-Dade DTPW Partially Funded Transit Projects FY 2019 – 2028

7	able 21: Miami-Dade DTPW Ur	nfunded Transit Projects FY 2019 – 2028

Terminal		
NW 122 <sup>nd</sup> Ave.	NW 12 <sup>th</sup> St. to NW 41 <sup>st</sup> St.	Construction of new two-lane road
Palmetto	SR 826 at NW 74 <sup>th</sup> St.	Construction of a 1,000-space parking garage
Intermodal		including long-term and short-term parking, kiss-
Terminal		and-ride, pool-and-ride, and a minimum of a 12-
(Phase 2)		bus bay terminal
Florida's	FIU Panther	Route will provide express bus service from the FIU
Turnpike	Station/Dolphin	Panther Station to Dolphin Station, the I-75/Miami
Express (North)	Station/Miami Gardens	Gardens Dr Station and the American Dream Mall
	Station/American Dream	Station. Headways will be 15 minutes during peak
	Mall Station	hours and 30 minutes during off-peak hours. This
		project will include the addition of four new
		articulated buses.

# FIU

# 107<sup>th</sup> Avenue Pedestrian Transit Greenways Corridor at City of Sweetwater

In 2003, the City of Sweetwater published a report to illustrate a community transportation system that can generate new opportunities in residential, commercial and recreational growth as well as adhere to the City's planning, development, and redevelopment efforts. Transit greenways are designed to be a place where residents can enjoy nature and green space in an urban environment. This study was designed to further advance the community's goals which are:

- Improving the quality of life for all, students of FIU and citizens of Sweetwater
- Natural resource conservation
- Recreation
- Economic development and redevelopment;
- Increasing property values; and,
- Providing improved economic and cultural opportunities for its citizens.

Specifically, the goals of the survey included undertaking a nontraditional transportation projects that would promote infrastructure development for a more walkable community and improve mobility and intermodal connections through alternate modes of transportation. The survey's goals also include identifying transit greenway opportunities for both the City of Sweetwater and FIU as well as identifying appropriate accessible funding sources for transit greenway project development. The report documents the following recommendations.

- Install chokers on SW 2<sup>nd</sup> St. and SW 3<sup>rd</sup> St. along SW 109<sup>th</sup> Ave.
- Install round about or speed humps on SW 2<sup>nd</sup> St. near the intersection of SW 108<sup>th</sup> Ave. and SW 2<sup>nd</sup> St.
- Install median barriers or chokers at the intersection of SW 109<sup>th</sup> Ave. and SW 8<sup>th</sup> St.
- Install roundabout or speed humps near the intersection SW 109<sup>th</sup> Ave. and SW 7<sup>th</sup> St.
- The traffic signals at the intersection of SW 109<sup>th</sup> Ave. and SW 4<sup>th</sup> St. can be replaced by a Traffic Circle.
- Install Raised Crosswalks or Raised Intersection or Speed Tables at the intersections of SW 107<sup>th</sup> Ave. and West Flagler and SW 107<sup>th</sup> Ave. and SW 8<sup>th</sup> St.
- Pavement markings have to be painted at West Flagler and SW 8<sup>th</sup> St. along SW 109<sup>th</sup> Ave. The left turn marking has to be painted at southbound instead of a through marking.
- The heavy traffic volume at the two major intersections (SW 8<sup>th</sup> St. and West Flagler St. along NW 109<sup>th</sup> Ave.) influences level of service. There is a need for improving geometric configuration at the said intersections to improve the traffic operations.

- In order to enhance the traffic operation of SW 109<sup>th</sup> Ave., Arterial Analysis that will include access management alternatives and operational and geometric improvements at the signalized intersection is recommended.
- Close the east-west traffic path by constructing a raised median at SW 7th terrace and SW 109 Avenue to avoid the left turning violation.

Furthermore, this study conceptualized four premium transit alternatives to connect FIU with a potential superblock neighborhood concept in Sweetwater. **Figure 15** through Error! Reference source not found. illustrate the four potential alignments for either a light rail or bus circulator.

## FIU Modesto A. Maidique Campus and Engineering Center Master Plans

The draft master plans illustrate all developments, both in construction and planned, to occur between 2015 – 2025 at Florida International University's Modesto A. Maidique Campus and Engineering Center. Future projects include the expansion of several existing buildings as well as new developments and improvements. These enhancements at both campuses indicate possible population density increase in that area, resulting in potential transportation improvement needs.

Of note, the plans include a pedestrian bridge and plaza across SW 8<sup>th</sup> Street and adjacent to SW 109<sup>th</sup> Avenue, the Panther Station near the new PG6 parking garage, and expansion of the Engineering Center as well as recreational facilities in this campus. FIU also recently began construction on a new 150-bed hotel which will feature a 32,000-square-foot conference center and a 13,700-square-foot Alumni Center on the northwest corner of the Modesto A. Maidique campus (see development 60 in **Figure 17**). **Figure 18** illustrates the developments planned for the Engineering Center.

EXISTING CONDITIONS REPORT

# TOWN OF MEDLEY

## Multimodal Mobility Plan

The Town of Medley conducted the Multimodal Mobility Study to improve bicycling, walking, and public transit as viable alternative modes of transportation. The Multimodal Mobility Study identifies specific transit and non-motorized transportation improvements that will become part of the City's work program or recommended to sister transportation agencies. It includes recommendations for bicycle and pedestrian facility improvements, as well as recommendations regarding a future Medley circulator service. **Table 22** and Figure 19 through Figure 21 present the bicycle and pedestrian recommendations of this plan. Figure 22 illustrates recommended potential trolley routes.

# City of Doral

## Transportation Master Plan

The City of Doral's Transportation Master Plan provides multimodal, roadway, "complete roadway grid" and transit projects in a prioritized program to build local multimodal capacity and relieve congestion.

The plan aims to identify specific projects and programs to address transportation needs and objectives. Detailed in the plan is a review of the City's Comprehensive Plan's Transportation Element, updated new plans for roadways, transit, pedestrian, bicycles and how to coordinate and connect these modules, as well as recommendations to participate in regional projects and studies of high transit capacity. The Master Plan proposes 22 multimodal, 45 roadway, and 13 transit projects in a prioritized program to build local multimodal capacity and further enhance the quality of life for the City's inhabitants. **Table 23** through

**Table** 25 list all the recommendations found in the Transportation Master Plan.

Project Name	Pedestrian Safety Improvements at Intersections
Purpose	The purpose of these projects is to implement safety improvements at intersections across the City. Improvements include adjusting vehicular turning radii; revising signalization, including pedestrian phases; high visibility cross walks; curb extensions; and other interventions.
Need	Although Doral's ROWs are wide, traffic volumes are high. Given that pedestrian activity can also be high at certain locations, it should be encouraged with more safe conditions. This is accomplished by providing clearly marked crossing points, particularly at intersections as well as crosswalk signals, many of which are conspicuously missing in Doral, leading pedestrians into a guessing game as to timing their crossing in relation to oncoming traffic.
Description	44 locations have been noted with need for improvement. Each intersection should undergo an individual pedestrian safety evaluation to explore the number of crashes, operational characteristics, signal timing, geometry, etc. This is necessary to make specific recommendations for each location. Work should be conducted in coordination with the Miami-Dade County Public Works Department in moving to design and construction.
Cost	Planning: \$ 293,000 Design: \$ 880,000 Construction: TBD (Due to differences in need for each intersection)

Table 23: Doral Transportation Master Plan Multimodal Projects

46

47

Project Name	Sidewalk Infrastructure Gap Infill
	The purpose of this project is to fill in the gaps in the sidewalk infrastructure to
Purpose	provide increased mobility. The ability to walk unobstructed is inherent in every trip
	taken, and gaps in the sidewalk system significantly hamper this ability.
	Analysis indicates significant gaps in the sidewalk system totaling approximately
	182,000 linear feet (as of April 2014). These gaps hinder pedestrian and multimodal
	transit mobility in Doral by creating more circuitous walking paths, creating non-
Need	Americans with Disabilities Act (ADA) compliant bus stops due to a lack of sidewalk
	connectivity to these stops, and in some instances creating situations where the
	only alternative for pedestrians is to walk on a non-separated grassy area or in the
	roadway.
	Prioritization of these sidewalk improvements should be based on proximity to
	residential areas, schools, parks, and bus or trolley stops, and then to existing
Description	businesses. Primarily, the purpose is to create a cohesive, connected walking
	network; thus, in some cases, the need for sidewalks can be bundled with a bicycle
	path to develop a shared use off-road path.
	Planning: Completed
Cost	Design: \$ 131,000
	Construction: \$2,180,000

Project Name	ADA Master Plan
Durmerce	The purpose of this project is to assure that City infrastructure is compliant with
Purpose	ADA rules and regulations.
	There are multiple locations in the City where fire hydrants and other public
	infrastructure (e.g., benches, shelters, traffic cameras, signage, and utility poles)
Need	present obstacles in pedestrian paths and transit riders. In some cases, these
	obstacles present issues for disabled persons in wheelchairs, as well as families with
	children in strollers and casual cyclists.
	Work with Miami-Dade County to determine which of these locations can have the
	fire hydrants or obstacles located out of the pedestrian paths. Develop a
	comprehensive inventory of all transit stops, buses, and all transit facilities noting
Description	any missing boarding and alighting connectivity. Once these locations have been
	confirmed, coordination with the owner will allow the obstacle to be removed and
	new infrastructure constructed to complete the network and bring the City into full
	compliance.
	Planning: \$75,000
Cost	Design: N/A
	Construction: N/A

Project Name	Sidewalk Repair
Desire a se	The purpose of this project is to repair or replace damaged, uneven, or cracked
Purpose	sidewalks.
	Analyses of data shows that about 1,750 ft. of sidewalks on NW 97 <sup>th</sup> Avenue, NW
Need	33 <sup>rd</sup> Street, NW 25 <sup>th</sup> Street, NW 41 <sup>st</sup> Street/NW 36 <sup>th</sup> Street, and NW 58 <sup>th</sup> Street
	need repair.
	Sidewalk locations will be prioritized then repaired. During the repair and
Description	replacement process, planning and design should be reviewed in regard to
	materials to be used, as well as areas where existing tree roots impact the sidewalk.
	Planning: \$6,000
Cost	Design: \$9,000
	Construction: \$150,000

Project Name	Pedestrian Islands at Intersections
Deserves	The purpose of this project is to select the locations for pedestrian safety islands at
Purpose	various intersections throughout the City.
	The public wants safer pedestrian access to and from various locations. From site
	reconnaissance it was noticed that pedestrian street crossings are difficult, with
Need	pedestrians not having appropriate time to cross at intersections, poorly marked
	intersections or pedestrians J-walking at mid-block. A primary solution is to provide
	pedestrian islands in the middle of typically wide ROW in the City.
	Thirty-one locations should see immediate consideration for construction of
	pedestrian islands. All locations currently have medians. Some intersections may
Description	require additional pedestrian islands at specific crossings, but would need median
Description	work, and thus were excluded. Work should be coordinated with Public Works and
	Miami-Dade DTPW to confirm high-access locations in order to prioritize crossings
	for approval, design, and construction.
	Planning: \$ 2,000
Cost	Design: \$ 7,000
	Construction: \$ 112,000

Project Name	Mid-block Crosswalks
Purpose	Provide safe pedestrian mid-block crossings along major corridors.
Need	The City is built on a grid of super blocks at the 1 mile and the ½-mile scale. The typical ROW of a major corridor is between 74 ft. and 86 ft., consisting of roads between 4 and 6 lanes. Pedestrian crossing as are typically inadequate, and only located at intersections, which means that pedestrians wishing to semi-safely cross the streets need to walk up to a mile to reach a destination. Often the land-use patterns place origins (office uses) and destinations (restaurants) on opposite sides of the street. The implementation of mid-block crossings up to every ¼-mile would provide pedestrians safe access to cross streets at five locations per block. The fact that there are so few safe crossings discourages walking and encourages auto trips. This project will encourage pedestrianism and help incrementally manage congestion, particularly during mid-day periods.
Description	Locate areas where origins and destination land uses are on opposite sides of the street. Evaluate crossing volumes and accessibility. Design appropriate crossings as necessary to include high visibility striping, reflectors, signage, pedestrian islands, countdown pedestrian signals, etc. Work with property owners and connect via pedestrian paths on private property.
Cost	Planning: \$20, 000 Design: TBD Construction: TBD

Project Name	Complete Streets Design Guidelines
Purpose	The purpose of this project is to create specific and consistent guidelines for streets in order to provide adequate capacity for all modes of travel to the fullest extent possible.
Need	Many roads in Doral predominantly prioritize automobiles. A set of Complete Streets Design Guidelines would foster the design and redevelopment of all streets to improve mobility.
Description	Complete Streets represent an incremental approach to enhancing the safety of the street network. A handbook of design guidelines for Complete Streets should be developed, which would provide measurements for sidewalks, bike lanes, street furniture, landscaping and transit infrastructure to be applied to Doral's streets. These design guidelines should be codified in the City's Land Development Code. Segments which may be completed include NW 87 <sup>th</sup> Avenue, NW 102 <sup>nd</sup> Avenue, NW 33 <sup>rd</sup> Street and NW 50 <sup>th</sup> Street. An example of Complete Streets can be found on NW 114 <sup>th</sup> Avenue between NW 58 <sup>th</sup> Street and NW 74 <sup>th</sup> Street. Future projects can utilize these concepts to integrate critical infrastructure.
Cost	Planning: \$50,000 Design: N/A Construction: N/A

Project Name	Streetscape Improvements
Purpose	The purpose of this project is to enhance the pedestrian environment within Doral.
Need	Shading for pedestrians to be accomplished by adding trees along walkways and shared-use paths. The pedestrian environment can be improved through the addition of visually appealing infrastructure.
Description	The implementation of shading and rest areas along pedestrian paths is essential toward improving walkability. Sidewalks should be set back from the street by a 6 ft. strip with tree plantings, as part of a Complete Streets system. The City can begin to implement the addition of shade by adopting specific sidewalk design standards which includes streetscape elements. Additional streetscape improvements to increase the appeal of walking include the creation of pocket parks, plazas, public art, and similar elements.
Cost	Planning: \$35,000 Design: TBD Construction: TBD

Project Name	Bicycling Safety and Education Programs
Purpose	The purpose of this project is to assure that cyclists and motorists alike are practicing safe and courteous behavior to minimize accidents and encourage more people to cycle.
Need	South Florida is one of the most dangerous places in the nation to ride a bicycle, in large part for lack of bicycle facilities and the spatial and operational characteristics. Educating cyclists how to properly ride on streets, as well as educating motorist to be aware of and treat cyclists will assist in making roads safer.
Description	Develop a bicycle/driver educational pamphlet, work to educate the public on bicycle and driver safety.
Cost	Planning: \$5,000 Design: \$10,000 Construction: N/A

Project Name	Complete Bicycling Network
Purpose	The purpose of this project is to complete the planned bicycle route system in Doral.
Need	In 2006, the City approved a bicycle master plan with approximately 21 miles of off- road facilities and approximately 12 miles of on-road bike lanes. To date, 8.8 miles have been implemented. Various gaps within the current proposed bicycle system have also been identified. Additional routes are necessary to provide for adequate east-west connections, or connections to the City's boundaries in areas where they can then be connected to a future Miami-Dade network. These pathways would require at least an additional 14 miles to be implemented.
Description	Work to implement the remaining facilities, through ROW acquisition, design and construction.
Cost	Planning: \$27,000 Design: \$ 80,000 Construction: \$ 12,300,000

Project Name	Bicycle Racks and Lockers Installation
Purpose	The purpose of this project is to increase bicycling mobility by installing bicycle racks and lockers throughout the City.
Need	Bicycle parking is scarce in Doral. Bicycles have been observed attached to chain- link fences. The lack of available parking places at many major commercial areas discourages bicycling.
Description	Bicycle rack locations need to be determined based on proximity of bicycling facilities and potential usage. Initial installation of bicycle racks should be at schools, transit-hub transfer areas, and at shopping centers such as the strip malls at NW 97 <sup>th</sup> Avenue and NW 41 <sup>st</sup> Street, the Publix shopping area at NW 58 <sup>th</sup> Street and NW 107 <sup>th</sup> Avenue, the retail area at NW 107 <sup>th</sup> Avenue and NW 41 <sup>st</sup> Street, and the strip mall at NW 87 <sup>th</sup> Avenue and NW 25 <sup>th</sup> Street. Further implementation in other areas would occur as funding becomes available. In some instances, the installation of bicycle racks must undergo coordination with a private property owner.
Cost	Planning: \$10,000 Design: TBD based on planning study Construction: TBD based on planning study

Project Name	Eastern Connection to Miami International Mall
Purpose	The purpose of this project is to provide a more direct connection
	for bicyclists and pedestrians to the Miami International Mall.
	This path will provide a less-circuitous route to the Mall, and a viable alternative
Need	when driving to the mall. Currently, residents ride their bicycles to the Miami
	International Mall, which has bicycle racks in its parking area.
	Acquisition of a small amount of right-of-way will be needed to develop this path.
	In addition, landscaping a pedestrian walkway and additional bicycle racks would
	make this an attractive option which would be closer to existing bicycling-network
	segments already constructed in Doral. Roadway construction could also be
Description	considered as part of this project and would alleviate some traffic caused by
Description	circuitous vehicular routes to reach the mall. Depending on the path of the trolley, a
	stop or bus hub could be affected near this entrance, thereby avoiding the need to
	route the trolley through roadways with higher congestion. Efforts need
	coordination with the Miami International Mall and surrounding businesses and
	property owners.
Cost	Planning: \$3,000
	Design: \$9,000
	Construction: \$150,000

Project Name	Bicycle Rental Program
Purpose	The purpose of this project is to provide bicycle rentals in Doral.
Need	Increased bicycle access may lead to increased bicycling and increased mobility.
Description	Bicycle rental/sharing systems are a major component of a more sustainable and intermodal transportation system. Bike-sharing provides an additional affordable means of transportation. The City should identify specific locations for implementation of bicycle rental racks. This will be based on proximity to destinations in the City, the needed capacity for bicycle parking in the area, and the ability to regularly maintain the system through manual repositioning of bicycles as necessary. Then the City should contact several bikeshare system providers to assess the feasibility of creating a system in Doral. If the City decided to pursue a system, vendors will be selected through a bid process.
Cost	Planning: \$35,000 Design: TBD based on provider Construction: TBD based on provider

Project Name	NW 74 <sup>th</sup> Street Bike Lane Conversion
Purpose	The purpose of this project is to convert the current bicycle lane on NW 74 <sup>th</sup> Street
	between NW 97 <sup>th</sup> Avenue and NW 107 <sup>th</sup> Avenue to a multi-use path.
	The current bicycle lane on NW 74 <sup>th</sup> Street would route bicyclists on the same road
Need	with heavy trucking and no separation and poses a safety concern. Observed
Need	behavior on NW 74 <sup>th</sup> Street Bicycle Lanes show runners in the bicycle lanes, and
	bicycles on the adjacent sidewalks.
Description	Develop a conceptual plan, scope design and bid plan for an off-road shared-use
	bicycle/pedestrian path on NW 74 <sup>th</sup> Street for approximately 5,200 ft. of the
	corridor.
Cost	Planning: \$ 10,000
	Design: \$ 25,000
	Construction: \$ 400,000

Project Name	Bicycle Signalization Program
Purpose	The purpose of this project is to promote bicycling safety at intersections.
Need	Public response during workshops indicated concerns for safety at intersections, which were noted to be difficult for the average rider to navigate, especially at intersections with high vehicular traffic. Miami-Dade County is requiring special signal phasing where bicycle paths intersect with signalized intersections.
Description	Bicycle signalization separates the bicyclist from vehicular traffic, allows them to pass or turn safely in an intersection, and reduces the level of vehicular-bicycle conflict in a manner similar to left-turn lane signalization. Signals are also differentiated through the usage of colored bicycle icons. Implementation will create a separate signalization system; thus, traffic timing for the intersection will have to be reviewed and adjusted. In addition, signalization may require the addition of dedicated Right-of-Way for bicyclists and should be applied to intersections with existing bicycle lanes or shared paths.
Cost	Planning: \$50,000 Design: NA Construction: NA

Project Name	Bicycle Connections to Miami-Dade System
Purpose	The purpose of this project is to promote bicycling mobility by connecting Doral's bicycling network to the Miami-Dade regional system.
Need	Workshops indicated the public's desire to have connections to the existing regional bicycle system.
Description	The City should determine which routes to connect to and prioritize building of bicycle-network lanes to the City's perimeter at points conducive to continued pathway development to existing bicycle lanes and shared-use paths. The City should also continuously work with the County and neighboring municipalities to ensure continuous connections to regional pathways to the south, east, and north of the City.
Cost	Planning: \$45,000 Design: TBD based on planning study Construction: TBD based on planning study

Project Name	Off-road Bicycle Path Maintenance and Rest Area Development
Purpose	The purpose of this project is to enhance bicycle network and mobility.
Need	Few rest areas exist along current bicycle paths or shared use paths. On some paths, the existence of a rest area will provide necessary shade now lacking. Water facilities, such as bathrooms or drinking fountains, do not exist, causing individuals to haul their own water for the duration of the trip. Path maintenance is also necessary in order to remove rubble.
Description	Rest areas should be developed along existing shared-use, off-road paths at approximately every 0.5 miles. These areas should be off of the path, and provide seating, shade, and water fountains. There should be a shaded area with water facilities incorporated into the site, along with bicycle racks in cases where there are public facilities, such as parks, along the route. Planning of future routes should also incorporate these items into the design of the bikeways.
Cost	Planning: \$10,000 Design: TBD Construction: \$100,000

Project Name	One Stop Personal Mobility Information Center
Purpose	Provide a portable or website app for use by the general public for multimodal trip
	timing and planning purposes.
	The development of this application will fulfill an objective in the City's
	Comprehensive Plan to provide for a "one-stop" information center for Doral
	residents and visitors on "Personal Mobility," which should offer access to public
	transit information, ride-sharing and carpooling, and bicycling and pedestrian
	routes. The easy availability of such information should allow for better trip
Need	planning, which will encourage utilization of alternative modes of transportation.
	Procurement of real-time bicycling data is possible through user-generated GPS
	data, and will allow the City to respond faster to the needs of bicycling in the
	community. It will aid its positioning of bicycle rental stations and future-path
	development and prioritization. Data collection for bicycling data is costly. This
	would potentially provide a more budget-friendly snapshot of evolving usage.
	Develop a mobile application and incorporate the specifications of personal
	mobility, such as pathways, and travel and transfer time estimates. Applications
Description	such as "Cycletracks" and "Stava Metro" can be used by bicyclists to record their
Description	paths by utilizing their phone's GPS. Theoretically, these apps could also be tied
	into bicycle route planning applications, thereby providing an additional benefit
	and incentive for usage by a bicyclist.
	Planning: \$100,000
Cost	Design: NA
	Implementation: NA

Project Name	Pedestrian Bridge over NW 41 <sup>st</sup> Street along NW 117 <sup>th</sup> Avenue
Purpose	Construct a pedestrian bridge over NW 41 <sup>st</sup> Street along NW 117 <sup>th</sup> Avenue
Need	Pedestrian bridge would connect north and south segments of the City's shared use path along canal on the west of the City. Currently, a gap exists, and while a roundabout route is suggested, field observations indicate jaywalking is a frequent problem at this junction.
Description	Design and construction of a pedestrian bridge over NW 41 <sup>st</sup> Street by NW 117 <sup>th</sup> Avenue. Project will include any need for ROW acquisition and must account for the entrance to the HEFT in the final design.
Cost	Planning: Completed Design: TBD Construction: \$3,800,000

Project Name	Revisit the City's Bicycle Master Plan
Purpose	Revise the City's Bicycle Master Plan in light of the plan's age and need to account
	for new bicycle network needs.
	The City's Bicycle Master Plan was written in 2007. During study creating the Transit
	Mobility Plan and in consideration of the overall transportation master plan, it was
	noted that the proposed routes are recreational in nature, and that a phase 2
Need	should be explored as the City begins to build its routes to provide for increased
	access to local neighborhoods. In addition, since the development of the plan, the
	City has gone through rapid growth – a revisit of the report will allow the City to
	take this into consideration.
	Study to assess existing and proposed bicycle facilities, with recommendations. The
Description	City should explore existing County and FDOT grant programs, including the TAP
	grant and the Miami-Dade TPO's Municipal Grant.
Cost	Planning: \$80,000
	Design: N/A
	Construction: N/A

Project Name	Perform a City-wide On-Street Parking Study
Purpose	Conduct assessment of on available on-street parking and associated policies in the City of Doral.
Need	Street parking serves to provide visitors and residents with an additional parking. Lack of parking in an area or close to destinations may result in additional vehicular circling in an area, adding to local VMT and congestion. In some areas, the addition of on-street parking may have a calming effect.
Description	The study should provide the City with a detailed, block-by-block inventory of available on-street parking. It should also determine policies for the City for the future development of street parking, if any, and designate the appropriate areas of the City. This study must also consider the City's total parking supply and potential needs in each neighborhood.
Cost	Planning: \$ 120,000 Design: N/A Construction: N/A

Project Name	Bluetooth and Connected Vehicle Technology Along Major Corridors
Purpose	Provide for the installation of Bluetooth receptors and Connected Vehicle signal
	technology along the major corridors, including intersections as needed.
Need	Bluetooth and other technology which can "ping" cell phone usage may be utilized to collect traffic data on a regular basis and allow for arterial travel time determination. This can then be used by the City as a monitoring tool to determine and react to transportation needs within the city as they occur in real-time.
	Connected vehicle signal technology should also be explored as well.
Description	The City should install Bluetooth and connected vehicle technology to create a "Smart" city and take advantage of future technology, such as driverless vehicles. Distance between the Bluetooth device's placement will vary, though may be on the lower end of the scale on the busier corridors. Installation of devices will generally include the Bluetooth receiver, and GPS systems. Additional study is needed to determine the locations to be emplaced; in addition, the City should explore co-location of the devices with lighting.
	Connected vehicle technology may be helpful for not only future transit operations, but also in aiding drivers through traffic. Existing systems are already being tested in Florida, and the connected technology has been implemented in various cars. Further, it is important to note that smart, driverless vehicle technology currently being tested in Florida, including a driverless shuttle in Tampa, require these Connected Vehicle Technology as a prerequisite infrastructure for implementation.
Cost	Planning: \$40,000 Design: TBD based on planning study Construction: TBD based on planning study

 Table 24: Doral Transportation Master Plan Roadway Projects

Project Name	Extend NW 117 <sup>th</sup> Avenue between NW 58 <sup>th</sup> Street to NW 60 <sup>th</sup> Street
Purpose	The purpose of the project is to provide a perimeter road around Doral Meadows
	Park and Eugenia B. Thomas K-8 Center.
Need	This project would fill gaps on NW 117 <sup>th</sup> Avenue at NW 74 <sup>th</sup> Street and NW 12 <sup>th</sup>
	Street, providing for a complete connection. This consists of new roadway between
	74 <sup>th</sup> Street and NW 58 <sup>th</sup> Street as well as crossings at NW 58 <sup>th</sup> Street and NW 41 <sup>st</sup>
	Street. This would add capacity to the roadway network and mitigate congestion.
	This project would fill gaps on NW 117 <sup>th</sup> Avenue at NW 74 <sup>th</sup> Street and NW 12 <sup>th</sup>
Description	Street, providing for a complete connection. This consists of new roadway between
Description	NW 74 <sup>th</sup> Street and NW 58 <sup>th</sup> Street as well as crossings at NW 58 <sup>th</sup> Street and NW
	41 <sup>st</sup> Street.
Cost	Planning: \$ 45,000
	Design: \$135,000
	Construction: \$ 2,250,000

Project Name	Flyover ramp to HEFT over NW 41 <sup>st</sup> Street to connect NW 25 <sup>th</sup> Street viaduct truck traffic
Purpose	Build a flyover ramp from Northwest 117 <sup>th</sup> Avenue to the northbound side of the HEFT, giving heavy trucks direct access to the HEFT.
Need	By providing a direct access to the HEFT, truck traffic is reduced along three main avenues.
Description	This project provides for a flyover ramp from NW 117 <sup>th</sup> Avenue to the northbound side of the Florida Turnpike, giving heavy trucks direct access to the Turnpike. As planned, slip ramp will be utilized for regular traffic. This priority 1 project has already been approved by council, with an agreement with the FTE.
Cost	Planning: Complete Design: TBD Construction: \$3,860,000

Project Name	Northbound connection of NW 117 <sup>th</sup> Avenue over NW 41 <sup>st</sup> Street
Purpose	Create a new north-south connection at NW 117 <sup>th</sup> Avenue and NW 41 <sup>st</sup> Street
Need	This route may hold potential as a truck bypass route and provides an alternative route for other vehicles within the City.
Description	A new connection at NW 41 <sup>st</sup> Street and NW 117 <sup>th</sup> Avenue would require that the current north-south gap at NW 41 <sup>st</sup> Street, where NW 117 <sup>th</sup> Avenue is currently two separate cul-de-sacs, be eliminated. Project will include any need for ROW acquisition and must account for the entrance to the HEFT in the final design.
Cost	Planning: \$26,000 Design: \$130,000 Construction: \$1,300,000

Project Name	Connection of NW 112 <sup>th</sup> Avenue between NW 36 <sup>th</sup> Street and NW 33 <sup>rd</sup> Street
Purpose	Construct roadway to infill missing link within Doral's roadway network.
Need	The City of Doral should infill missing connections within the network to provide for a complete roadway grid. A complete grid will provide relief for the major arterials.
Description	Construction of approximately 0.15 miles of a 2-lane roadway. This should then be connected with a hypothetical roadway extension of NW 33 <sup>rd</sup> Street from NW 107 <sup>th</sup> Avenue.
Cost	Planning: \$15,000 Design: \$72,000 Construction: \$720,000

Project Name	Connection of NW 84 <sup>th</sup> Avenue between NW 54 <sup>th</sup> Street and NW 53 <sup>rd</sup> Terrace
Purpose	Construct roadway to infill missing link within Doral's roadway network.
	The City of Doral should infill missing connections within the network to provide
Need	for a complete roadway grid. A complete grid will provide relief for the major
	arterials.
Description	Construct approximately 0.2 miles of a 2-lane roadway by City Hall.
	Planning: \$2,000
Cost	Design: \$10,000
	Construction: \$100,000

Project Name	Connection of NW 82 <sup>nd</sup> Avenue between NW 54 <sup>th</sup> Street and NW 53 <sup>rd</sup> Terrace
Purpose	Construct roadway to infill missing link within Doral's roadway network.
Need	The City of Doral should infill missing connections within the network to provide for a complete roadway grid. A complete grid will provide relief for the major arterials.
Description	Construct approximately 0.06 miles of 2 lane roadway in Downtown Doral to extend NW 82 <sup>nd</sup> Avenue.
Cost	Planning: \$6,000 Design: \$30,000 Construction: \$300,000

59

Project Name	Connection of NW 14 <sup>th</sup> Street between NW 84 <sup>th</sup> Avenue and NW 82 <sup>nd</sup> Avenue
Purpose	Construct roadway to infill missing link within Doral's roadway network.
Need	The City of Doral should infill missing connections within the network to provide for a complete roadway grid. A complete grid will provide relief for the major arterials. Currently the location is mostly paved, except for a small segment; construction to fill the gap will allow for better mobility and accessibility for the surrounding properties.
Description	Construction and re-pavement of an approximately 0.01-mile segment of roadway on NW 14 <sup>th</sup> Street between NW 84 <sup>th</sup> Avenue and NW 82 <sup>nd</sup> Avenue.
Cost	Planning: \$1,000 Design: \$5,000 Construction: \$50,000

Project Name	Connection of NW 17 <sup>th</sup> Street between NW 84 <sup>th</sup> Avenue and NW 82 <sup>nd</sup> Avenue
Purpose	Construct roadway to infill missing link within Doral's roadway network.
Need	The City of Doral should infill missing connections within the network to provide for a complete roadway grid. A complete grid will provide relief for the major arterials. Currently the location is mostly paved, except for a small segment; construction to fill the gap will allow for better mobility and accessibility for the surrounding properties.
Description	Construction and re-pavement of an approximately 0.01-mile segment of roadway on NW 17 <sup>th</sup> Street between NW 84 <sup>th</sup> Avenue and NW 82 <sup>nd</sup> Avenue.
Cost	Planning: \$1,000 Design: \$5,000 Construction: \$500,000

Project Name	Connection of NW 21 <sup>st</sup> Street between NW 84 <sup>th</sup> Avenue and NW 82 <sup>nd</sup> Avenue
Purpose	Construct roadway to infill missing link within Doral's roadway network.
Need	The City of Doral should infill missing connections within the network to provide for a complete roadway grid. A complete grid will provide relief for the major arterials. Currently the location is mostly paved, with the exception of a small segment; construction to fill the gap will allow for better mobility and accessibility for the surrounding properties.
Description	Construction and re-pavement of an approximately 0.02-mile segment of roadway on NW 21 <sup>st</sup> Street between NW 84 <sup>th</sup> Avenue and NW 82 <sup>nd</sup> Avenue.
Cost	Planning: \$2,000 Design: \$10,000 Construction: \$100,000

Project Name	Connection of NW 14 <sup>th</sup> Street between NW 98 <sup>th</sup> Court and NW 97 <sup>th</sup> Avenue
Purpose	Construct roadway to infill missing link within Doral's roadway network.
Need	The City of Doral should infill missing connections within the network to provide
	for a complete roadway grid. A complete grid will provide relief for major arterials.
Description	Construction of an approximately 0.17-mile segment of roadway on NW 14 <sup>th</sup> Street
	between NW 98 <sup>th</sup> Court and NW 97 <sup>th</sup> Avenue.
Cost	Planning: \$16,000
	Design: \$82,000
	Construction: \$820,000

Project Name	Widen NW 90 <sup>th</sup> Street between NW 107 <sup>th</sup> Avenue and NW 97 <sup>th</sup> Avenue
Purpose	Widen NW 90 <sup>th</sup> Street between NW 107 <sup>th</sup> Avenue and NW 97 <sup>th</sup> Avenue to 4 lanes.
Need	Currently, the roadways services residential properties in the north of Doral. South of these properties are land which are expected to be developed into new mixed-use developments, which will result in a need for additional capacity of NW 90 <sup>th</sup> Street.
Description	Widen the existing NW 90 <sup>th</sup> Street from 2 to 4 lanes between NW 107 <sup>th</sup> Avenue and NW 97 <sup>th</sup> Avenue. This project will require coordination with the City of Medley in order to procure room for the expansion, and may, depending on the project's needs, merge with Medley's NW 102 <sup>nd</sup> Avenue.
Cost	Planning: \$95,000 Design: \$470,000 Construction: \$4,700,000

Project Name	Construct new roadways for "White Course" development
Purpose	Future redevelopment of the golf course located between NW 41 <sup>st</sup> Street, NW 48 <sup>th</sup>
	Street, NW 87 <sup>th</sup> Avenue and NW 79 <sup>th</sup> Avenue will necessitate new roadways for
	internal circulation.
Need	To accommodate future growth and development within the City.
Description	Construction of six new local roadways for internal circulations within the new
	development, "White Course". New roadways will include the following, however
	the actual layout of the roadways will depend on the final plat.
	<ul> <li>NW 48<sup>th</sup> Street Between NW 87<sup>th</sup> Avenue and NW 79<sup>th</sup> Avenue</li> </ul>
	<ul> <li>NW 82<sup>nd</sup> Avenue Between NW 41<sup>st</sup> Street and Geneva Court</li> </ul>
	Planning: \$140,000
Cost	Design: \$680,000
	Construction: \$6,800,000

Project Name	Turbo-lane at the intersection of NW 41 <sup>st</sup> Street/NW 109 <sup>th</sup> Avenue
Purpose	Install Turbo-lane at the intersection of NW 41 <sup>st</sup> Street/NW 109 <sup>th</sup> Avenue
Need	Flow-through traffic on NW 41 <sup>st</sup> Street will be enhanced at this intersection.
Description	This project will install a turbo-lane on the intersection to facilitate flow-through traffic. Currently, left turns onto NW 109 <sup>th</sup> Avenue is from a dedicated lane, but left turns out of NW 109 <sup>th</sup> Avenue do not have this option. Signalization of the intersection, as well as synchronization with the lights at NW 107 <sup>th</sup> Avenue and NW 112 <sup>th</sup> Avenue and NW 114 <sup>th</sup> Avenue, needs to be studied and implemented as part.
Cost	Planning: \$6,000 Design: \$30,000 Construction: \$300,000

Project Name	Construct new roadways for future growth and development particularly in the north, Sections 08 and 17
Purpose	Future development in the north of the City will necessitate new roadways to complete the grid.
Need	To accommodate future growth and development within the City.
Description	<ul> <li>Construction of new main roadways for access and circulation.</li> <li>New roadways will include the following:</li> <li>NW 102<sup>nd</sup> Ave. from NW 58<sup>th</sup> St. to NW 90<sup>th</sup> St. new 4 lane facility</li> <li>NW 66<sup>th</sup> St. from NW 97<sup>th</sup> Ave. to NW 107<sup>th</sup> Ave. new 2 lane facility</li> <li>NW 62<sup>nd</sup> St. from NW 99<sup>th</sup> Ave. to NW 107<sup>th</sup> Ave. new 2 lane facility</li> <li>NW 104<sup>th</sup> Ave. from NW 58<sup>th</sup> St. to NW 62<sup>nd</sup> St. new 2 lane facility</li> <li>NW 99<sup>th</sup> Ave. from NW 58<sup>th</sup> St. to NW 66<sup>th</sup> St. new 2 lane facility</li> <li>NW 99<sup>th</sup> Ave. from NW 58<sup>th</sup> St. to NW 66<sup>th</sup> St. new 2 lane facility</li> <li>NW 78<sup>th</sup> Ter. from NW 97<sup>th</sup> Ave. to NW 107<sup>th</sup> Ave. new 2 lane facility</li> <li>NW 82<sup>nd</sup> St. from NW 104<sup>th</sup> Ave. to NW 107<sup>th</sup> Ave. new 2 lane facility</li> <li>NW 88<sup>th</sup> St. from NW 102<sup>nd</sup> Ave. to NW 107<sup>th</sup> Ave. new 2 lane facility</li> <li>NW 80<sup>th</sup> Ave. from NW 48<sup>th</sup> St./Geneva Ct. to NW 41<sup>st</sup> Street new 2 lane facility</li> </ul>
Cost	Section 8 Roadways Planning: \$150,000 Design: \$740,000 Construction: \$7,400,000 Section 17 Roadways Planning: \$220,000 Design: \$1,100,000 Construction: \$ 11,000,000

Project Name	Intersection/Traffic Improvement at NW 12 <sup>th</sup> Street and NW 107 <sup>th</sup> Avenue
Purpose	Improve the intersection for traffic flow.
Need	Intersection has an AM LOS of E and PM LOS of F at the eastbound and
	westbound lanes.
Description	Add westbound right turn lane and signal optimization.
Cost	Planning: \$8,000
	Design: \$38,000
	Construction: \$380,000

Project Name	Roadway widening and operational improvements
Purpose	Remedy future roadway level of service deficiencies with road widening and
	operational improvements.
Need	An analysis of various roadways and future growth within the City indicated
neeu	unacceptable levels of service along specific segments.
Description	<ul> <li>Operational and road widening improvements to various roadway segments as determined by this study.</li> <li>NW 25<sup>th</sup> St. from NW 79<sup>th</sup> Ave. to NW 97<sup>th</sup> Ave. widen from 4 to 6 lanes</li> <li>NW 36<sup>th</sup> St. from NW 79<sup>th</sup> Ave. to NW 97<sup>th</sup> Ave. widen from 4 to 6 lanes</li> <li>NW 107<sup>th</sup> Ave. from NW 25<sup>th</sup> St. to NW 33<sup>rd</sup> St. widen from 4 to 6 lanes</li> <li>NW 112<sup>th</sup> Ave. from NW 25<sup>th</sup> Ave. to NW 79<sup>th</sup> Ave. widen from 4 to 6 lanes</li> <li>NW 112<sup>th</sup> Ave. from NW 34<sup>th</sup> St. to NW 50<sup>th</sup> St. widen from 4 to 6 lanes</li> <li>NW 12<sup>th</sup> St. from NW 87<sup>th</sup> Ave. to NW 79<sup>th</sup> Ave. widen from 4 to 6 lanes</li> <li>NW 12<sup>th</sup> St. from NW 97<sup>th</sup> Ave. to NW 107<sup>th</sup> Ave. widen from 4 to 6 lanes</li> <li>NW 12<sup>th</sup> St. from NW 97<sup>th</sup> Ave. to NW 112<sup>th</sup> Ave. raise speed limit to 40 mph</li> <li>NW 36<sup>th</sup> St./NW 41<sup>st</sup> St. from NW 87<sup>th</sup> Ave. to NW 107<sup>th</sup> Ave. raise speed limit to 40 mph</li> <li>NW 36<sup>th</sup> St./NW 41<sup>st</sup> St. from NW 87<sup>th</sup> Ave. to NW 107<sup>th</sup> Ave. widen from 6 to 8 lanes</li> <li>NW 97<sup>th</sup> Ave. from NW 12<sup>th</sup> St. to NW 25<sup>th</sup> St. widen from 4 to 6 lanes</li> <li>NW 97<sup>th</sup> Ave. from NW 34<sup>th</sup> St. to NW 25<sup>th</sup> St. widen from 4 to 6 lanes</li> <li>NW 97<sup>th</sup> Ave. from NW 34<sup>th</sup> St. to NW 25<sup>th</sup> St. widen raise speed limit to 40 mph</li> <li>NW 12<sup>th</sup> St. from NW 97<sup>th</sup> Ave. to NW 107<sup>th</sup> Ave. widen from 4 to 6 lanes</li> <li>NW 117<sup>th</sup> Ave. from NW 97<sup>th</sup> Ave. to NW 107<sup>th</sup> Ave. widen from 4 to 6 lanes</li> <li>NW 25<sup>th</sup> St. from NW 97<sup>th</sup> Ave. to NW 107<sup>th</sup> Ave. widen from 4 to 6 lanes</li> <li>NW 36<sup>th</sup> St. from NW 97<sup>th</sup> Ave. to NW 107<sup>th</sup> Ave. widen from 4 to 6 lanes</li> <li>NW 38<sup>th</sup> St. from NW 97<sup>th</sup> Ave. to NW 107<sup>th</sup> Ave. widen from 4 to 6 lanes</li> <li>NW 38<sup>th</sup> St. from NW 97<sup>th</sup> Ave. to NW 107<sup>th</sup> Ave. widen from 4 to 6 lanes</li> <li>NW 38<sup>th</sup> St. from NW 97<sup>th</sup> Ave. to NW 107<sup>th</sup> Ave. widen from 6 to 8 lanes</li> <li>NW 38<sup>th</sup> St. from NW 97<sup>th</sup> Ave. to NW 107<sup>th</sup> Ave. widen from 6 to 8 lanes</li> <li>NW 38<sup>th</sup> St. from NW 97<sup>th</sup> Ave. to NW 97<sup>th</sup> Ave. widen from 4 to 6 lanes</li> <li< th=""></li<></ul>
Cost	Planning: TBD Design: TBD Construction: TBD

Project Name	Intersection/Traffic Improvement at NW 12 <sup>th</sup> Street and NW 87 <sup>th</sup> Avenue
Purpose	Improve the intersection for traffic flow.
Need	Intersection has an AM LOS of F at the eastbound lane and a PM LOS of F at the
	eastbound lane and Eat the westbound lane.
Description	Add northbound left turn lane, southbound right turn lane and optimize signal.
Cost	Planning: \$14,000
	Design: \$68,000
	Construction: \$680,000

Project Name	Intersection/Traffic Improvement at NW 25 <sup>th</sup> Street and NW 117 <sup>th</sup> Avenue
Purpose	Improve the intersection for traffic flow.
Need	Intersection has an AM LOS of E at the northbound lane and F at the southbound lane, and a PM LOS of F in both the northbound and southbound lanes.
Description	Split phase removal/realignment and signal optimization.
Cost	Planning: \$4,000 Design: \$20,000 Construction: \$200,000

Project Name	Intersection/Traffic Improvement at NW 25 <sup>th</sup> Street and NW 107 <sup>th</sup> Avenue
Purpose	Improve the intersection for traffic flow.
Need	Intersection has an AM LOS of E at the northbound and eastbound lanes, and a PM
	LOS of E at the northbound, southbound, eastbound and westbound lanes.
Description	Add southbound right turn lane and signal optimization.
Cost	Planning: \$8,000
	Design: \$38,000
	Construction: \$380,000

Project Name	Intersection/Traffic Improvement at NW 25 <sup>th</sup> Street and NW 97 <sup>th</sup> Avenue
Purpose	Improve the intersection for traffic flow.
Need	Intersection has a PM LOS of E at both the southbound and eastbound lanes.
Description	Add northbound, southbound, eastbound and westbound right turn lanes.
	Planning: \$30,000
Cost	Design: \$152,000
	Construction: \$1,520,000

Project Name	Intersection/Traffic Improvement at NW 25 <sup>th</sup> Street and NW 82 <sup>nd</sup> Avenue
Purpose	Improve the intersection for traffic flow and safety.
	Intersection has AM LOS of E at the northbound and westbound lanes and F at the
Need	southbound lane, and a PM LOS of E at the northbound and southbound lanes.
	This intersection is also experiencing high crash rates.
Description	Add southbound, eastbound and westbound turn lanes; signal optimization.
	Planning: \$23,000
Cost	Design: \$114,000
	Construction: \$1,140,000

Project Name	Intersection/Traffic Improvement at NW 25 <sup>th</sup> Street and NW 79 <sup>th</sup> Avenue
Purpose	Improve the intersection for traffic flow.
Need	Intersection has an AM LOS of E at the northbound and southbound lanes, and a
	PL LOS of F at the southbound lane.
Description	Remove split phase by changing the southbound approach to two lefts, one thru
	and one right turn lane. Add eastbound turn lane, and signal optimization.
Cost	Planning: \$24,000
	Design: \$118,000
	Construction: \$1,180,000

Project Name	Intersection/Traffic Improvement at NW 33 <sup>rd</sup> Street and NW 107 <sup>th</sup> Avenue
Purpose	Improve the intersection for traffic flow.
	Intersection has an AM LOS of E at the northbound lane and F at the southbound
Need	and eastbound lanes, and a PM LOS of F at the eastbound lane and E at the
	westbound lane.
Description	Remove split phase eastbound/westbound; signal optimization.
	Planning: \$2,000
Cost	Design: \$10,000
	Construction: \$100,000

Project Name	Intersection/Traffic Improvement at NW 33 <sup>rd</sup> Street and NW 97 <sup>th</sup> Avenue
Purpose	Improve the intersection for traffic flow.
Need	Intersection has an AM LOS of E at the southbound and westbound lanes and F at
	the eastbound lanes, and a PM LOS of F at the westbound lane.
Description	Add northbound right turn lane; signal optimization.
Cost	Planning: \$8,000
	Design: \$38,000
	Construction: \$380,000

Project Name	Intersection/Traffic Improvement at NW 33 <sup>rd</sup> Street and NW 87 <sup>th</sup> Avenue
Purpose	Improve the intersection for traffic flow.
Need	Intersection has an AM LOS of F at the eastbound lane and E at the westbound
	lane and a PM LOS of E at the eastbound lane and F at the westbound lane.
Description	Add eastbound and westbound right turn lanes; signal optimization.
Cost	Planning: \$15,000
	Design: \$76,000
	Construction: \$760,000

Project Name	Intersection/Traffic Improvement at NW 41 <sup>st</sup> Street and NW 115 <sup>th</sup> Avenue
Purpose	Improve the intersection for traffic flow.
Need	Intersection has an AM LOS of E at the southbound lane and a PM LOS of E at the
	northbound lane.
Description	Add dual left northbound turn lanes, signal optimization.
Cost	Planning: \$6,000
	Design: \$30,000
	Construction: \$300,000

Project Name	Intersection/Traffic Improvement at NW 41 <sup>st</sup> Street and NW 114 <sup>th</sup> Avenue
Purpose	Improve the intersection for traffic flow.
Need	Intersection has an AM LOS of E at the northbound and eastbound lanes and F at the southbound lane, and a PM LOS of F at the northbound and southbound lanes.
Description	Add eastbound and westbound right turn lanes; signal optimization.
Cost	Planning: \$15,000 Design: \$76,000 Construction: \$760,000

Project Name	Intersection/Traffic Improvement at NW 41 <sup>st</sup> Street and NW 107 <sup>th</sup> Avenue
Purpose	Improve the intersection for traffic flow.
	Intersection has an AM LOS of F at the northbound, southbound and westbound
Need	lanes, and an E at the eastbound lane. Intersection's PM LOS is of E at the
	northbound and eastbound lanes and F at the southbound and westbound lanes.
Description	Remove split phase; signal optimization.
	Planning: \$2,000
Cost	Design: \$10,000
	Construction: \$100,000

Project Name	Intersection/Traffic Improvement at NW 41 <sup>st</sup> Street and NW 102 <sup>nd</sup> Avenue
Purpose	Improve the intersection for traffic flow.
Need	Intersection has an AM LOS of F at the northbound lane and E at the southbound
	lane and a PM LOS of E at the northbound and southbound lanes.
Description	Remove split phase; signal optimization.
Cost	Planning: \$2,000
	Design: \$10,000
	Construction: \$100,000

Project Name	Intersection/Traffic Improvement at NW 36 <sup>th</sup> Street and NW 87 <sup>th</sup> Avenue
Purpose	Improve the intersection for traffic flow.
	Intersection has an AM LOS of E at the southbound and westbound lanes and F at
Need	the eastbound lanes, and a PM LOS of E at the northbound, eastbound and
	westbound lanes and F at the southbound intersection.
Description	Add southbound and westbound turn lanes; signal optimization.
	Planning: \$15,000
Cost	Design: \$76,000
	Construction: \$760,000

Project Name	Intersection/Traffic Improvement at NW 36 <sup>th</sup> Street and NW 82 <sup>nd</sup> Avenue
Purpose	Improve the intersection for traffic flow.
Need	Intersection has a PM and AM LOS of F at the northbound and southbound lanes.
Description	Add southbound, northbound, eastbound and westbound right turn lanes; signal
	optimization.
Cost	Planning: \$30,000
	Design: \$152,000
	Construction: \$1,520.000

Project Name	Intersection/Traffic Improvement at NW 36 <sup>th</sup> Street and NW 79 <sup>th</sup> Avenue
Purpose	Improve the intersection for traffic flow.
	Intersection has a PM and AM LOS of F at the northbound and southbound lanes
Need	and AM LOS of E at the westbound lane, and a PM LOS of E at both eastbound and
	westbound lanes.
Description	Split phase removal, add eastbound thru lane, add southbound and westbound
	right turn lanes; signal optimization.
Cost	Planning: \$17,000
	Design: \$86,000
	Construction: \$860,000

Project Name	Intersection/Traffic Improvement at NW 58 <sup>th</sup> Street and NW 114 <sup>th</sup> Avenue
Purpose	Improve the intersection for traffic flow.
Need	Intersection has an AM LOS of E at the eastbound lane and F at the westbound
	lane.
Description	Add eastbound and westbound right turn lanes.
Cost	Planning: \$15,000
	Design: \$76,000
	Construction: \$760,000

Project Name	Intersection/Traffic Improvement at NW 58 <sup>th</sup> Street and NW 107 <sup>th</sup> Avenue
Purpose	Improve the intersection for traffic flow.
Need	Intersection has an AM LOS of F at the northbound lane and E at the eastbound and westbound lanes. Intersection's PM LOS is F at the northbound lane and E at the southbound and westbound lanes.
Description	Add southbound, northbound, eastbound and westbound right turn lanes; signal optimization.
Cost	Planning: \$30,000 Design: \$152,000 Construction: \$1,520,000

Project Name	Intersection/Traffic Improvement at NW 58 <sup>th</sup> Street and NW 97 <sup>th</sup> Avenue
Purpose	Improve the intersection for traffic flow.
Need	Intersection has an AM LOS of F at both northbound and southbound lanes, and a
	PM LOS of F at the southbound lane and E at the westbound lane.
Description	Remove split phase, add northbound, southbound, westbound and eastbound
	right turn lanes; signal optimization.
Cost	Planning: \$30,000
	Design: \$152,000
	Construction: \$1,520,000

Project Name	Intersection/Traffic Improvement at NW 58 <sup>th</sup> Street and NW 87 <sup>th</sup> Avenue
Purpose	Improve the intersection for traffic flow.
Need	Intersection has a PM and AM LOS of F at both northbound and southbound.
Description	Add northbound, westbound and eastbound right turn lanes; signal optimization.
	Planning: \$23,000
Cost	Design: \$114,000
	Construction: \$1,140,000

Project Name	Intersection/Traffic Improvement at NW 74 <sup>th</sup> Street and NW 114 <sup>th</sup> Avenue
Purpose	Improve the intersection for traffic flow.
Need	Intersection has a PM and AM LOS of F at both the northbound and southbound
	lanes, and a PM LOS of E at the westbound lane.
Description	Add northbound right turn lane, southbound right turn lane, eastbound right turn
	lane and westbound right turn lane.
Cost	Planning: \$30,000
	Design: \$152,000
	Construction: \$1,520,000

Project Name	Intersection/Traffic Improvement at NW 74th Street & NW 107th Avenue
Purpose	Improve the intersection for traffic flow.
Need	Intersection has an AM LOS of F at both southbound and eastbound lanes, and a
	PM LOS of F at the westbound lane.
Description	Add southbound, eastbound and westbound right turn lanes; signal optimization.
Cost	Planning: \$15,000
	Design: \$76,000
	Construction: \$760,000

Project Name	Intersection/Traffic Improvement at NW 74 <sup>th</sup> Street and NW 97 <sup>th</sup> Avenue
Purpose	Improve the intersection for traffic flow.
Need	Intersection has an AM LOS of F at both northbound and westbound lanes, and a
	PM LOS of F at the northbound.
Description	Signalize intersection.
Cost	Planning: \$4,000
	Design: \$20,000
	Construction: \$200,000

Project Name	One-Way Pair Conversion to NW 112 <sup>th</sup> Avenue and NW 114 <sup>th</sup> Avenue
Purpose	To relieve congestion and traffic in this area of the City.
Need	These roadways are currently experiencing failing LOS at peak periods. There are several vacant lots on Doral Boulevard that are expected to be developed.
Description	Implementation will involve restriping and signing each roadway to create one-way roads which are currently two-way. NW 112 <sup>th</sup> Avenue and NW 114 <sup>th</sup> Avenue between Doral Boulevard and NW 58 <sup>th</sup> Street will be one-way streets in opposite directions. The project will include a protected bike lane on each roadway. Intersection improvements will include changing turn movements and signalization optimization.
Cost	Planning: \$ 30,000 Design: TBD based on alternatives analysis Implementation: TBD based on alternatives analysis

Project Name	Install "Do not Block the Box" at Intersections
Purpose	Install "Do Not Block the Box" signage and intersections Install "Do Not Block the Box" signage and intersection markings at the following intersections. NW 87 <sup>th</sup> Avenue/NW 13 <sup>th</sup> Terrace NW 87 <sup>th</sup> Avenue/NW 17 <sup>th</sup> Street NW 87 <sup>th</sup> Avenue/NW 27 <sup>th</sup> Street NW 87 <sup>th</sup> Avenue/NW 27 <sup>th</sup> Street NW 87 <sup>th</sup> Avenue/NW 58 <sup>th</sup> Street NW 84 <sup>th</sup> Avenue/NW 36 <sup>th</sup> Street NW 84 <sup>th</sup> Avenue/NW 36 <sup>th</sup> Street NW 82 <sup>nd</sup> Avenue/NW 12 <sup>th</sup> Street NW 82 <sup>nd</sup> Avenue/NW 36 <sup>th</sup> Street NW 107 <sup>th</sup> Avenue/NW 14 <sup>th</sup> Street NW 107 <sup>th</sup> Avenue/NW 17 <sup>th</sup> Street NW 107 <sup>th</sup> Avenue/NW 17 <sup>th</sup> Street NW 107 <sup>th</sup> Avenue/NW 17 <sup>th</sup> Street NW 107 <sup>th</sup> Avenue/NW 27 <sup>th</sup> Street NW 107 <sup>th</sup> Avenue/NW 17 <sup>th</sup> Street NW 107 <sup>th</sup> Avenue/NW 27 <sup>th</sup> Street NW 107 <sup>th</sup> Avenue/NW 27 <sup>th</sup> Street NW 107 <sup>th</sup> Avenue/NW 17 <sup>th</sup> Street
Need	City police, staff, and field reviews during the development of the transportation master plan have all indicated that vehicular blocking of various intersections within the City have hindered traffic and exacerbated congestion issues. In addition, blocking the box at intersection crosswalks hinders safe crossings by pedestrians and bicyclists.
Description	Designation of program at specific intersections, with the addition of signage and roadway marking to denote effort to avoid vehicles blocking the box. This must also be conducted in conjunction with an education program for the public.
Cost	Planning: \$1,000 Design: \$4,000 Construction: \$40,000

Project Name	Intersection/Traffic Improvement at NW 12 <sup>th</sup> Street and NW 97 <sup>th</sup> Avenue (Off/On
	Ramps)
Purpose	Improve the intersection for traffic flow.
Need	LOS D observed
Description	Add westbound and northbound right turn lanes and provide access to
	southbound 97 <sup>th</sup> Avenue from 12 <sup>th</sup> Street.
Cost	Planning: \$15,000
	Design: \$76,000
	Construction: \$760,000

Project Name	Doral Boulevard Corridor Safety Study (Between NW 97 <sup>th</sup> Avenue and NW 87 <sup>th</sup> Avenue)
Purpose	The purpose of this project is to evaluate safety on the NW 36 <sup>th</sup> Street/NW 41 <sup>st</sup> Street corridor between NW 87 <sup>th</sup> Avenue and NW 97 <sup>th</sup> Avenue for both vehicles and pedestrians crossing the road.
Need	For the period March 2013 to March 2014, the Doral Police Department has 171 traffic crash case numbers reported on the NW 36 <sup>th</sup> Street/ NW 41 <sup>st</sup> Street corridor between NW 87 <sup>th</sup> Avenue and NW 97 <sup>th</sup> Avenue. This equates to a crash approximately once every 2 days. Potentially, pedestrians are crossing the roadway in order to reach a bus stop.
Description	A preliminary safety study should be conducted on this corridor to determine the cause of crashes and possible remediating actions which can be undertaken. Additionally, this study should examine the safety and feasibility of mid-block pedestrian crossings, especially by the bus stops. In particular, the stop across Univision should be evaluated, along with those at the NW 97 <sup>th</sup> Avenue/NW 41 <sup>st</sup> Street and NW 87 <sup>th</sup> Avenue/NW 36 <sup>th</sup> Street intersections.
Cost	Planning: \$25,000 Design: NA Construction: NA

Project Name	Intersection Safety Studies
Purpose	The purpose of this project is to provide for safety analyses at five intersections to
	adjust at important locations.
Need	Crash Data at these intersections show a high number of crashes, based on the
need	spot rate, which are crashes per AADT per million vehicles.
	Safety Studies are necessary at each of these intersections to determine changes
	that may be needed. Should the intersection merit further review, additional study
	and implementation of corrective measures should be undertaken.
Description	• NW 12 <sup>th</sup> Street and SR 836
Description	<ul> <li>NW 36<sup>th</sup> Street and NW 79<sup>th</sup> Avenue</li> </ul>
	NW 41 <sup>st</sup> Street and NW 107 <sup>th</sup> Avenue
	NW 41 <sup>st</sup> Street and NW 97 <sup>th</sup> Avenue
	<ul> <li>NW 33<sup>rd</sup> Street and NW 82<sup>nd</sup> Avenue</li> </ul>
Cost	Planning: \$125,000
	Design: TDB
	Construction: TDB

Project Name	Bus Stop Amenities Improvements
Purpose	The purpose of this project is to make transit more attractive to potential riders by providing more amenities.
Need	The future of transit will be the traveler who has a choice. Bus-stop amenities are a critical component. Shelter, shade from the sun, protection from the rain, safety, seating, and real-time travel information are all critical components of the system.
Description	Determine the location, cost and feasibility of implementing amenities at transit stops in Doral. At least 38 shelters and 25 benches are needed. In addition, bicycle racks should be installed at major hubs, including bicycle rental stations. Prioritizing improvements should be based on existing and future ridership. The City can also explore installing real-time information signs at all bus stops including updatable electronic signs linked to the current real-time system utilized by the City's website and app. Initial locations for implementation of real-time bus information display systems should be at transfer hub locations, such as NW 87 <sup>th</sup> Avenue and NW 36 <sup>th</sup> Street, NW 58 <sup>th</sup> Street and NW 107 <sup>th</sup> Avenue, Miami International Mall, and NW 97 <sup>th</sup> Avenue and NW 41 <sup>st</sup> Street.
Cost	Planning: \$7,000 Design: TBD Construction: TBD

#### Table 25: Doral Transportation Master Plan Transit Projects

Project Name	Extend the Metrorail to/from Palmetto Station and Downtown Doral
Purpose	The purpose of this project is to increase mobility by connecting the center of Doral
	directly to the Metrorail.
Need	Extending the Metrorail would increase mobility and provide alternatives for those
	entering and exiting the City on a daily basis. By implementing this project, Doral's
	citizens will have easier access to the locations that Metrorail serves.
	Evaluate routing options for ridership, cost, operations and maintenance, capital,
Description	and timing, and select preferred option. Work with Miami-Dade Transit to have
Description	approved. Develop a timeline for implementation. A potential route may be along
	NW 79 <sup>th</sup> Avenue; this would allow for a regional route to South Dade/Kendall areas.
Cost	Planning: \$250,000
	Design: 280,000,000
	Construction: 2.8 billion

Project Name	Signal Priority for Buses/Trolleys			
Purpose	Implement a system by which buses and trolleys receive priority signals in order to			
	improve on-time performance and transit reliability.			
	On-time transit reliability and in-transit time are both factors for riders. Signal			
Need	prioritization may allow for better transit-time performance for transit in Doral by			
	reducing dwell time at intersections.			
	Conduct a study to evaluate on-time performance, ridership, and rider in-transit			
	time. Improvement options include installing technology at traffic signals and			
	transponders on the buses/trolleys. Impact to traffic flow should be examined as			
	part of the evaluation. Coordination with MDCPW and DTPW is important. Potential			
Description	intersections include:			
Description	<ul> <li>NW 41<sup>st</sup> Street and NW 97<sup>th</sup> Avenue</li> </ul>			
	NW 36 <sup>th</sup> Street and NW 87 <sup>th</sup> Avenue			
	NW 25 <sup>th</sup> Street and NW 87 <sup>th</sup> Avenue			
	NW 25 <sup>th</sup> Street and NW 97 <sup>th</sup> Avenue			
	• NW 12 <sup>th</sup> Street and NW 107 <sup>th</sup> Avenue			
	\$13,500 per intersection, \$75 per transponder per bus			
Cast	Planning: \$ 30,000			
Cost	Design: NA			
	Implementation: TDB			

Project Name	FIU Trolley Route Expansion			
Purpose	<b>ose</b> Implement a system by which buses and trolleys receive priority signals in order to improve on-time performance and transit reliability.			
Need	<b>leed</b> The success of the current trolley service could be enhanced by reaching more potential riders needing additional options to reach the university.			
Description	<b>Description</b> Three conceptual routes are being studied to determine the preferred alternative connect the university with the Metrorail stations and other key destinations withi the City. The route would service both the engineering campus and the main campus. Implementation would include purchasing 3 additional trolleys.			
Cost     Planning: \$ 30,000       Implementation: \$600,000				

Project Name	Transit Development Plan			
Purpose	The purpose of this project is to ensure the efficiency and effectiveness of the Doral			
Fulpose	Trolley by establishing new routes in response to future growth of the City.			
	It is customary for transit systems to re-evaluate their routes on a periodic basis. This helps provide responsiveness to shifts in ridership and rider characteristics, and			
	to determine whether capital investments are necessary. Typically, the increase of			
Need	frequency would increase ridership, further shifting the mode split towards transit,			
	and reducing automobile trips. In addition to headway frequency, new routes may			
	be needed. The plan would include a potential new route between FIU and			
	downtown Doral.			
	Using available data, and possibly, collecting new data on headways, ridership,			
	boarding and alighting by route and stop, as well as public involvement though			
	ridership surveys or workshops, evaluate the performance of the current routes and			
Description	stops. Recommendations can then be made for changes, with provided costs for			
Description	the needed capital, operations and maintenance of the changes. Proposed			
	recommendations should note the transit access areas, based on a 1/4-mile walking			
	distance from a trolley stop with headways of at least 30 minutes or less, and			
	should streamline the operations of the trolley in coordination with DTPW bus lines.			
	Planning: \$150,000			
Cost	Design: NA			
	Implementation: TBD			

Project Name	Doral Trolley Sunday Service			
Purpose	Extending trolley service to Sundays			
<b>Need</b> The public involvement portion of this study showed a desire for more adequated Sunday transit service.				
DescriptionDevelop Sunday service route options. Evaluate the capital, operations and maintenance costs. Evaluate headways, buses needed, and potential ridership Select the service to be provided and test it for a period of 3 months. Then d on the service's adequacy and reconfigure route as necessary. Based on currer ridership and transit coverage areas, Route 1 is currently serving as the pilot for Sunday service and could be expanded to cover places of worship. This ro currently serves most of the City, including the northwestern quadrant which currently has no DTPW bus service.				
CostPlanning: \$ 5,000 (or as part of COA).Design: N/A Implementation: TBD				

Project Name	Express Route to MIA/MIC		
Durmona	The purpose of this project is to increase the mobility of Doral's citizens to the		
Purpose	current Miami-Dade County regional hub.		
	For transit to be attractive, when compared with other modes of transportation,		
Need	particularly the automobile, it needs to be competitive in travel time, cost, and		
need	amenities. Transit has to be convenient with easy transfers for mid-and long-		
	distance trips to be competitive.		
Description	Coordinate with DTPW if this provision is acceptable to it; evaluate the capital,		
Description	operations, and maintenance costs.		
	Planning: \$6,000 (or as part of COA)		
Cost	Design: NA		
	Implementation: TBD		

Project Name	Trolley Lunch Route Pilot Program			
Purpose	Increase mobility by extending trolley service hours by providing service during lunch hours for the Doral trolley.			
Need	The public involvement portion of this study showed a desire for more lunch trans service. Increased lunch service will aid in reducing vehicular traffic.			
Need       service. Increased lunch service will aid in reducing vehicular traffic.         Develop a lunch service alternative for the trolley. Identify generators, evaluate the capital, operations and maintenance costs. Evaluation of headways, buses needed and potential ridership are necessary to selecting a service option. The route short run from 11:30 AM to 1:30 PM. Service Routes should have short headways (7 minutes) in order to adequately service the lunch hour, and could run the follow routes:         • NW 41st Street/NW 36th Street between NW 87th Avenue and NW 114th Avenue         • NW 87th Avenue between NW 36th Street and NW 25th Street         Post evaluation, the chosen service option should be tested for a period of 3 months. Then a determination on the service's adequacy and a reconfiguration of the route, as necessary, should be made.				
Cost	Planning: (As part of COA)			

Project Name	Doral Trolley Passport Program		
Purpose	Incentivizing fare reductions, either in parking costs or through lower boarding		
Pulpose	fares to provide cost advantages versus private automobile usage.		
	Transit must be competitive with the automobile in travel line and cost to become a		
Need	viable alternative for the choice riders. Public involvement during this study		
	indicated a partial aversion to transit due to fares for frequent riders.		
	Various means exist to present transit as a more financially viable method of		
	transportation. People typically tend to treat parking prices in a disproportionate		
	manner, as an extra surcharge to the transit fare; providing free parking in riding		
	transit provides an incentive, especially if the driver would have had to pay for		
	parking at their destination. Additionally, many transit fare programs exist through		
Description	DTPW, but are not necessarily known by people who qualify or by businesses, and		
	additional outreach may aid enrollment in these programs. The City may also elect		
	to create its own incentive program through partnerships with local businesses,		
	either through the creation of promotional rewards programs for riding public		
	transit or through recognition of businesses within Doral which makes conscious,		
	green efforts in reducing vehicular use.

## Transit Mobility Plan

The City's Transit Mobility Plan took into consideration all transportation studies impacting Doral over the last 20 years to assess the regional policy toward multimodal transportation in that area. The main focus of the plan was providing alternatives to single occupancy vehicular transit as a form of travel to maximize capacity on its roadway network. To determine these alternatives, the plan identifies missing sidewalk links, potential bicycle facilities, and recommendations on transit and development policies. Extensive data was collected and documented and then further analyzed to identify transportation system enhancements in four areas: Transit Network Analysis, Pedestrian Network Analysis, Bicycle Network Analysis, and Policy Analysis. Transit network analysis concluded that long range planning should position the Doral Trolley to be the exclusive transit for the City, with regional connections stemming from a local hub in the City. **Table 26** summarizes the recommendations presented in this plan.

Project	Project Roadway	Limits	Project Description
1	NW 12 <sup>th</sup> St.	NW 87 <sup>th</sup> Ave.	Signal improvements
2	NW 36 <sup>th</sup> St./41 <sup>st</sup> St.	NW 42 <sup>nd</sup> Ave. to HEFT	Express streets (ITS, grade separators, etc.)
3	NW 58 <sup>th</sup> St.	NW 107 <sup>th</sup> Ave. to SR 826	Congestion management
4	NW 87 <sup>th</sup> Ave.	SR 836 to NW 58 St.	Improve SR 836/NW 12 <sup>th</sup> St./NW 87 <sup>th</sup> Ave. interconnections: improve intersection to accommodate truck movements
5	NW 112 <sup>th</sup> Ave.	NW 84 <sup>th</sup> St. to NW 86 <sup>th</sup> St.	Pedestrian facility improvements
6	NW 74 <sup>th</sup> St.	NW 107 <sup>th</sup> Ave. to NW 84 <sup>th</sup> Ave.	Bicycle facility improvements
7	NW 82 <sup>nd</sup> St.	NW 113 <sup>th</sup> Ave. to NW 117 <sup>th</sup> Ave.	Pedestrian facility improvements
8	NW 87 <sup>th</sup> Ave.	NW 58 <sup>th</sup> St. to NW 74 <sup>th</sup> St.	Pedestrian facility improvements
9	Eugenia B. Thomas	Safe routes to school	Non-motorized facility improvements
10	NW 36 <sup>th</sup> St.	NW 79 <sup>th</sup> Ave. to NW 74 <sup>th</sup> Ave.	Pedestrian facility Improvements
11	NW 97 <sup>th</sup> Ave.	NW 74 <sup>th</sup> St. to NW 58 <sup>th</sup> St.	Bicycle facility improvements

Table 26: Doral Transit Mobility Plan Recommendations

# Bicycle Network Plan

In 2015, the City of Doral prepared a Bikeway Network Plan to develop a network of proposed shared use trails for the City and to serve as an implementation guide for proposed trails and bike lanes. The plan also includes recommended outreach programs for Doral to implement for developing a complete community bicycling program. The proposed multi-use trails will provide dedicated facilities that would provide residents and employees with transportation, recreational, and leisure opportunities.

This plan identifies seven off-street bikeways that connect to residential neighborhoods, schools, parks, shopping areas, and other community facilities.

- Atlas Trail (Ruta Morada)
- Beacon Trail (Ruta Rosada)
- Dressel's Dairy Trail (Ruta Azul)
- Greenway Trail (Ruta Verde)

- Limestone Trail (Ruta Plata)
- Sunshine Trail (Ruta Amarilla)
- Turnpike Trail (Ruta Roja)

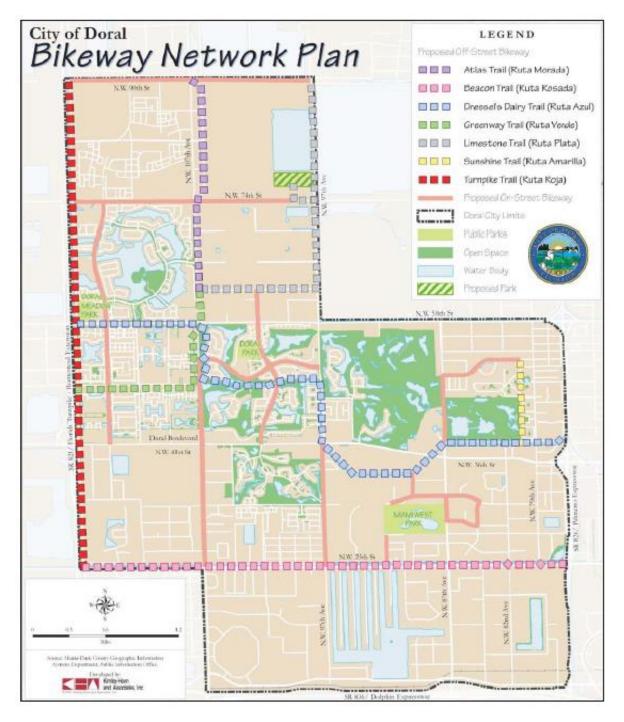

Figure 24: City of Doral Proposed Bicycle Network

The proposed trails connect residential neighborhoods of Doral to schools, parks, retail centers, and employment centers. Two primary different types of facilities were identified for Doral (off-street trails and on-street bicycle facilities). **Figure 24** identifies the following potential off-street trails, which include proposed greenway trails identified in the North Dade Greenways Master Plan:

- NW 25<sup>th</sup> Street canal ROW (identified as the Beacon Trail), which runs east-west across Doral.
- HEFT ROW (identified as the Turnpike Trail), which runs north-south along the western boundary of Doral.
- Canal ROW paralleling Doral Boulevard, NW 53<sup>rd</sup> Street, and NW 58<sup>th</sup> Street. This canal meanders across the entire City of Doral from east to west and passes through several important activity centers and residential neighborhoods.
- Florida Power & Light (FPL) easement along the south side of NW 50<sup>th</sup> Street running east-west between HEFT and NW 107<sup>th</sup> Avenue.
- FPL easement along NW 107<sup>th</sup> Avenue running north-south between NW 50<sup>th</sup> Street and NW 90<sup>th</sup> Street.
- FPL easement north of and parallel to NW 58<sup>th</sup> Street between NW 107<sup>th</sup> Avenue and NW 97<sup>th</sup> Avenue.
- NW 97<sup>th</sup> Avenue ROW between the FPL easement and NW 90<sup>th</sup> Street.
- FPL easement west of and parallel to NW 79<sup>th</sup> Avenue running north-south between the Doral Boulevard canal and NW 53<sup>rd</sup> Street.
- Connection to the new park northwest of the NW 74<sup>th</sup> Street/NW 97<sup>th</sup> Avenue intersection.

# FIU Trolley Expansion Feasibility Study

In 2017, the City of Doral conducted a feasibility study to explore three alternatives for a trolley route expansion that would provide services between FIU and the City. Factors such as population density, activity centers, interconnection to other transit systems, and coverage areas were considered when developing these alternatives. This circulator was proposed because approximately 4,500 FIU students and 600 FIU faculty and staff live in Doral. The alternatives that prepared for the City also provide service to other potential generators besides FIU, such as Ronald W. Reagan Doral Sr. High School and Divine Savior Academy.

The recommended alternative, illustrated in **Figure 25**, is 15.2 miles in length and provides a northern circulation to service NW 90<sup>th</sup> Street, Ronald W. Reagan Doral Sr. High School Islands at Doral, Landmark, and Midtown. The southern circulation of this alternative services the FIU Engineering Center, the 109 Tower and FIU's main campus. **Table 27** summarizes the recommended alternative's operations. This

Schedule	Weekday	Saturday	Sunday
Route Length	15.2 miles		
Number of Trolleys	2		
Average Speed	11 mph		
Peak Hour Headways	30 – 45 minutes		
Off-Peak Headways	30 – 45 minutes	No Service	No Service
Service Span	6:00 AM – 11:00 PM		
Number of Stops	42		
Number of Stations	9		
Spacing between Stops	<b>n Stops</b> 500 to 3,500 feet		

Table 27: New FIU Route #4 Operations

In addition to the new FIU route, the City modified its Route 1 to service the soon to open Dolphin Park-and-Ride Station adjacent to the HEFT and NW 12<sup>th</sup> Street interchange. This modification included service to Dolphin Mall as an interim route until the station opens. The service modifications also included route alignment adjustments to Routes 2 and 3, weekday service hour expansion on Routes 1 and 2, and commencement of Saturday service on Route 2.

Hence, the City held a public outreach workshop on September 5, 2017 and a public hearing on March 14, 2018 to seek public input regarding the proposed modification. On March 21, 2018, the City Commission adopted Resolution No. 18-51 to implement the proposed modifications. On October 2, 2018, the Board of County Commissioners approved the proposed modifications through the approval of Agenda Item No. 8(N)(4) – First Amendment to the Interlocal Agreement between Miami-Dade County and the City of Doral for the Provision of Public Transportation Services.

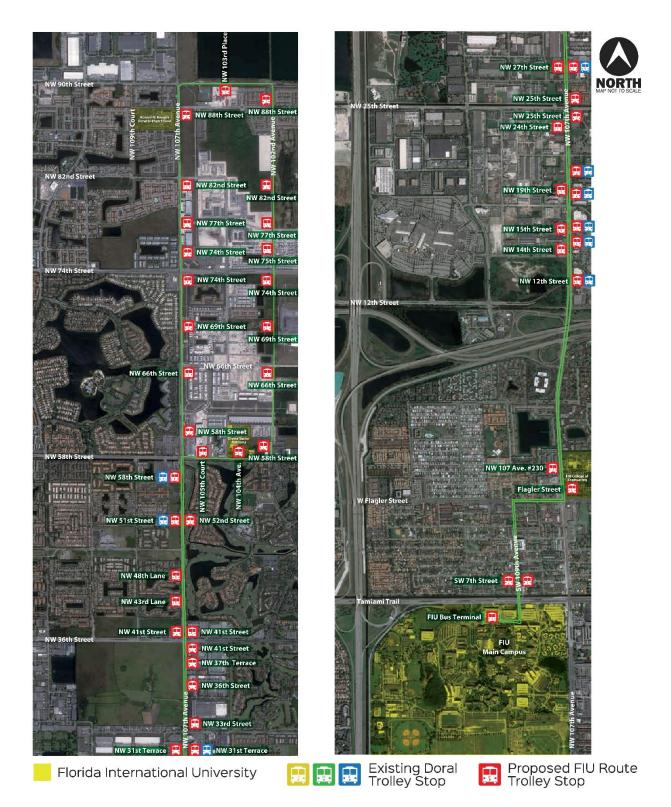

Figure 25: New Doral Trolley FIU Route #4

# 2016 Trolley On-Board Survey

The City conducts regular on-board surveys of trolley riders. In 2016, the City conducted its fifth survey on-board routes 1, 2, and 3. The surveyors collected 467 forms using paper-and-clipboard approach. Both English and Spanish survey forms were distributed. The survey results are summarized below.

- 60% of trips surveyed began from home.
- 28% of trips surveyed began from a non-work place.
  - 37% of these trips began from schools.
  - o 23% of these trips began from colleges/universities.
  - o 14% of these trips began from grocery stores/shopping centers.
- 84% of riders were dropped-off to the trolley stop or transferred from DTPW Metrorail.
- 74% of riders chose walking as their last-mile mode of transportation.
- 42% of trips surveyed ended at home.
- 29% of trips surveyed ended at work.
- 24% of trips surveyed ended at a non-work place.
  - o 23% of these trips ended at grocery stores/universities.
  - 22% of these trips ended at schools.
- 40% of riders use the trolley 3-5 days a week.
- 31% of riders use the trolley 6-7 days a week.
- 34% of riders solely use the Blue Route (Route 1).
- 64% of riders only use the trolley twice per day.
- 54% of riders do not have a car available or are not able to drive.
- 61% of riders live in the City of Doral.
- 34% of riders work in the City of Doral
- Overall, 77% of all trolley services ratings were Very Good or Good, compared to 27% for Fair and Poor.

84 84

#### Doral Design District Master Plan

The Doral District Design Master Plan that was published in 2010, intends to establish the framework for the future development of a regionally strategic district in a much-desired location within the City of Doral. The framework is designed to emphasize the provision of quality retail, employment, urban housing choices, marketplace with community services, and recreational amenities for both the residents and visitors to Doral.

There are three approved projects – Transal Park, Atrium, and Park Square at Doral - within the District's area of influence that add immense value and potential to the District. Transal Business Park is a proposed mixed-use project located at the northeast intersection of NW 87th Avenue and NW 25th Street. It proposes 374,000 square feet of office space, 9,000 square feet of bank, 52,358 square feet of retail, 282,000 square feet of hotel, 27,410 square feet of restaurant, and 189,750 square feet of warehouse use. The Atrium property proposes a mixed-use urban infill redevelopment project with 660,000 square feet of office space and 450,00 square feet of retail space. Park Square at Doral proposes approximately 2.35 million square feet of mixed-use development. The commercial area, consisting of mostly food and beverage and specialty boutique, will be the main access point for all of the retail area.

The Design District Master plan also outlines three planned roadway improvements – NW 25<sup>th</sup> Street Viaduct and NW 33<sup>rd</sup> Street Extension. The NW 25<sup>th</sup> Street Viaduct planned improvement consists of the reconstruction of NW 25<sup>th</sup> Street from NW 89<sup>th</sup> Court to SR 826/Palmetto Expressway. NW 25<sup>th</sup> Street will be widened from its existing configuration of five lanes undivided to six lanes divided with improved drainage and wide medians. The widening will be to the north into the North Line Canal through bulkhead walls and an at-grade bridge along the canal. The planned improvement to NW 33<sup>rd</sup> Street is an extension between NW 87<sup>th</sup> Avenue and NW 97<sup>th</sup> Avenue. Doing so would provide an arterial connection from the District's core out to the Doral community that would in turn help circulate and alleviate some of the traffic on NW 36<sup>th</sup> Street and NW 25<sup>th</sup> Street.

# Doral Boulevard Beautification Master Plan

The Doral Boulevard Beautification Master Plan was created with the intent to address the planning and landscape architectural components of the corridor's beautification process. It is meant to serve as both vision and guidance for how the physical environment along Doral Boulevard should be built and articulated. Given that the Doral area is fairly new and at the early stages of its life, most of the existing conditions along the corridor are in relatively good condition. The corridor has many potential opportunities for improvement and beautification that will benefit the City in the long run. The plan includes designs for gateways, major intersections, roadway medians streetscape improvements, and streetscape details. The boulevard is divided into sections and the possible opportunities are illustrated accordingly.

# Low Impact Development Master Plan

The Low Impact Development Master Plan is intended to assist the City in maximizing implementation of LID Integrated Management Practices. This would allow for reduced environmental impacts from anticipated new developments and/or redevelopment projects. Currently, the City is experiencing significant growth in residential and non-residential areas which leads to increased developments including a new downtown, several major mixed-use developments, commercial mixed-use projects, and redevelopment projects. This plan dictates practices that will minimize environmental impacts as well as guidance for LID site planning, hydrologic analysis, and erosion and sediment control practices.

The master plan includes recommendations that provisions for long-term maintenance, monitoring, and enforcement be developed. It was also suggested that Site Planning Regulations should be evaluated to minimize the requirements for property setbacks, traffic distribution network widths, sidewalk widths, and right-of-way areas.

#### Housing Master Plan

The City of Doral conducted a Housing Master Plan public workshop to both inform the public and gather feedback that would aid in developing a Housing Action Plan. The purpose of Housing Master Plan is to address the shortage of workforce housing in the community and propose policies to address workforce housing and related local housing issues. The plan also facilitates public/private sector solutions to provide more housing opportunities for government workers, young professionals and other members of the workforce. The projected population increase of 78.5% from 2016 to 2030 indicates that there will be an increase in the demand for housing of all types, which leads to a need for a Housing Action Plan to establish a vision, guiding principles/goals and strategies, as well as implementation too and plan recommendations to create action items.

# Green Master Plan

In 2008, the City of Doral Green Master Plan was developed with the goal of conserving natural resources, enhancing quality of life, bolstering economic vitality, and leaving a sustainable legacy to future generations of City residents. There are multiple benefits and potential long-term savings for the City that would result from green investments. The City has purchased hybrid vehicles for official City use to decrease the City's carbon footprint. The guiding green principles outlined in the green master plan that be used when creating any future developments or potential projects for the City are as follows:

- Reduce vehicle travel miles
- Strengthen landscape and open space standards
- Create strong energy efficiency standards
- Incentivize alternative urban energy sources
- Interconnect the City's places
- Conserve water
- Reuse and recycle
- Bring back community agriculture
- Strive to be a "carbon-neutral" City government
- Initiate education and outreach

To increase connectivity as a way to reduce automobile related greenhouse gases and increase both social and economic health as well as increase the ease of travel, the City should ensure that all new and proposed streets are connected to existing streets, which would decrease reliance on major arterial roads for travel.

# Parks and Recreation Master Plan

Doral's lack of transportation connectivity, such as congested roads, little local roadway network, and few transportation alternatives, provides the Parks Master Plan the opportunity to address these issues. It acts as a platform for proposed solutions to completing the street system and upgrading the existing development pattern to one where motorists, bicyclists, and pedestrians can be accommodated safely and comfortably. This plan aims to achieve a high quality and diverse system of public parks and recreation sites that meet the needs of existing and future residents and businesses of the City of Doral. The City is currently deficient in park acreage according to the current standard of 3.25 acres per 1,000 residents set forth in the comprehensive plan, which increased to 4.25 acres in 2015. An analysis of the LOS facilities revealed that the City needs more bicycling facilities, boat ramps, camping areas, fishing piers, walking/hiking trails, and recreational/athletic spaces. A system wide analysis was conducted that looked at the following characteristics:

- Equitable access
- Community sociability
- Sense of place stewardship
- Protection of the natural environment
- Responsible planning and administration

In addition to recommended improvements to existing conditions, the plan also includes proposed greenways, trails, and bikeways and they are listed below:

- Greenways
  - $\circ$  NW 177<sup>th</sup> Avenue 4 miles
  - NW 107<sup>th</sup> Avenue/NW 50<sup>th</sup> Street 3.5 miles
  - $\circ$  NW 62<sup>nd</sup> Street 1 mile
  - NW 52<sup>nd</sup> Street/Canal 4 miles
  - NW 25<sup>th</sup> Street– 3 miles
  - $\circ$  NW 80<sup>th</sup> Avenue/NW 15<sup>th</sup> Street 4 miles

- Multi-Purpose Trails
  - Doral Preserve Trail 0.75 miles
  - NW 58<sup>th</sup> Street 2 miles
  - NW 114<sup>th</sup> Avenue 0.5 miles
  - NW 112<sup>th</sup> Avenue/Stormwater Park 1.8 miles
  - NW 19<sup>th</sup> Street 1 mile
  - NW 12<sup>th</sup> Street 1 mile
  - NW 84<sup>th</sup> Street 1 mile
  - NW 92<sup>nd</sup> Avenue corridor 0.75 mile
  - $\circ$  NW 29<sup>th</sup> Street 1 mile
  - NW 33<sup>rd</sup> Street 1 mile
  - Downtown Doral Waters Edge Loop 1 mile
  - NW 87<sup>th</sup> Avenue 0.75 mile
- Shared Use/Enhanced Sidewalks
  - NW 90<sup>th</sup> Street 2 miles
  - NW 82<sup>nd</sup> Street 1.3 miles
  - NW 74<sup>th</sup> Street 2 miles
  - NW 114<sup>th</sup> Avenue 2.1 miles
  - $\circ$  NW 107<sup>th</sup> Avenue 1.5 miles
  - NW 41<sup>st</sup> Street 1.5 miles
  - NW 20<sup>th</sup> Street corridor 1.2 miles
  - $\circ$  NW 12<sup>th</sup> Street 1 mile
  - $\circ$  NW 87<sup>th</sup> Avenue 2.25 miles
  - NW 82<sup>nd</sup> Avenue 1.5 miles
  - NW 53<sup>rd</sup> Street 0.8 miles
- On-Street Bicycle Lanes
  - Doral Boulevard 4 miles
  - NW 79<sup>th</sup> Avenue 2 miles
  - NW 33<sup>rd</sup> Street 1 mile
  - NW 112<sup>th</sup> Avenue 0.5 mile
  - Northern Connector 1.5 miles

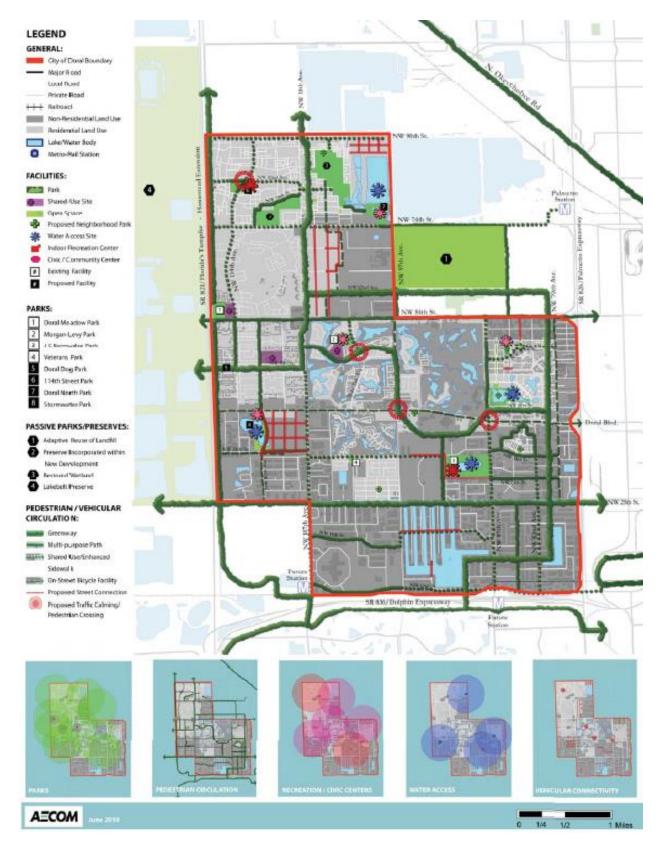

Figure 31: Doral Parks and Recreation Master Plan Vision

# EXISTING SYSTEM REVIEW DORAL TROLLEY SYSTEM

## Management and Organizational Structure

The DTS began service on February 2008 as a pilot project organized between the City of Doral and Miami-Dade County as part of the Municipal Transportation Program. This program is funded through the County's PTP which calls for 20% of surtax proceeds to be distributed directly to municipalities on a pro rata basis for use on local transportation and transit projects. Furthermore, the PTP stipulates that municipalities must invest at least 20% of their surtax share on transit. In 2016, the City and the County approved a second inter-local agreement to continue DTS operations. This agreement, adopted as resolution number R-1164-16 by the Board of County Commissioners and resolution number 16-167 by the City of Doral's Council, is effective for five years and subject to two five-year automatic renewals. The agreement are:

- The City is responsible for bus stop passenger amenities such as bus shelters and benches at all bus stops served by the DTS
- The City may charge a fare similar to other County agreements for service, however, the fare structure must accept all Miami-Dade DTPW passes, transfers, or identifications entitling an eligible passenger to ride the service without paying an additional fare (i.e., Miami-Dade County Patriot Passport or Golden Passport) or at half fare for babies, toddlers, children, and teenagers (i.e., kindergarten through 12<sup>th</sup> grade students)
- The DTS shall operate with fixed or semi-fixed routes where at least 70% of each route is within City boundaries
- Changes to routes, schedules, or fares may only occur after the following steps have been performed by the City:
  - o Advertise a notice of public hearing in English and Spanish
  - Conduct a minimum of one public hearing that gives the community an opportunity to voice their opinion concerning any changes
  - Present evidence of advertisement and completion of public hearing to the County
- The City shall collect and keep on file documentation of insurance of any and all private providers operating the DTS routes, as well as the County, including:
  - Worker's Compensation and Employer's Liability per the statutory limits of the state of Florida
  - Commercial General liability of \$1,000,000.00 per occurrence of bodily injury and property damage
  - Automobile Liability of \$1,000,000.00 for each occurrence of owned/nonowned/hired automobiles
  - Blanket fidelity bond of \$10,000.00

- The City may seek federal or state grant funding and provide grant-matching funds at its own discretion – the County may contribute none, part, or all of the grant-matching funds required
- The County agrees to pay the City its attributable share of federal and state formula funds received from United States Department of Transportation (USDOT) and FDOT in the event the DTS statistics result in an increase to the County's transportation funding

**Table 28** summarizes the previous five-year funding amounts received by the City of Doral from Miami-Dade County to operate and maintain the DTS as well as the 2019 projections. Since its inception, the County has invested \$16,262,951.00 in the DTS.

Year	Population	Funding per Capita	Total Funding
2019*	64,167	\$41.87	\$ <i>2</i> ,686,686.00
2018	59,304	\$42.30	\$2,508,438.00
2017	55,660	\$40.11	\$2,232,432.00
2016	52,889	\$40.10	\$2,120,607.00
2015		Data Not Reported	
2014	47,529	\$37.19	\$1,767,800.00

#### Table 28: Miami-Dade County Five Year Funding Summary of the DTS

Note: \*2019 values projected at 3% growth from FY 2018

#### Operations

The DTS has four routes identified by color; Blue, Yellow, Green, and Purple. Route 1, the Blue Route, connects Midtown Doral, Dolphin Mall, and the Miami International Mall. Route 2, the Yellow Route, connects the Palmetto Metrorail Station, Doral Government Center, Downtown Doral, Miami-Dade College West, and Doral City Place. Route 3, the Green Route, connects Midtown Doral with the Palmetto Metrorail Station. Lastly, Route 4, the Purple Route, connects Midtown Doral, Miami International Mall, and FIU's Engineer and Modesto A. Maidique campuses. **Table 29** summarizes the amount of stops per route and schedule.

Longth			Schedule					
Route	Length (miles)	Number of Stops	Wee	kday	Satu	rday	Sun	day
	(miles)		AM	PM	AM	PM	AM	PM

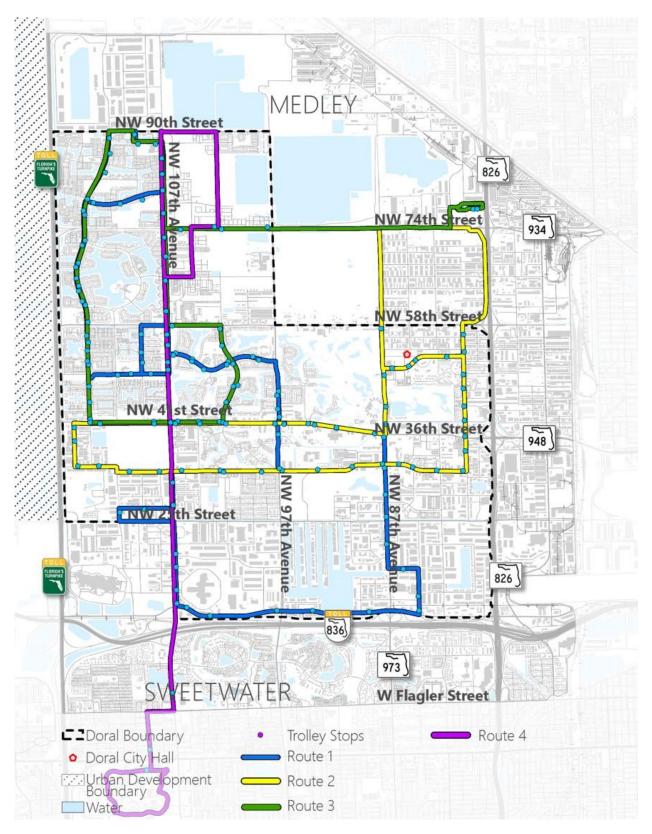

Figure 32: DTS Routes and Stops

67

The City operates 16 vehicles ranging from 30 to 34 feet in length. These vehicles, depicted in **Figure 33**, resemble old-style streetcars or trams with front pilot/cowcatcher, framed windows, round lights, wooden bench seating, and double roof. Referred to as "trolley-replica buses" by the American Public Transportation Association (APTA), these vehicles have rubber tires, run on biodiesel fuel, and have an estimated service life of 10 years or 350,000 miles. Doral's fleet has an average age of 4.5 years with five of its 16 vehicles having more than five years in operations.

Table 32 through **Table 34** summarize key characteristics of the City's fleet. These vehicles cost an average of \$173,500 and have the following amenities:

- GPS tracker
- Automated Passenger Counter (APC)
- Security cameras
- Wireless internet routers (Wi-Fi)
- Bicycle racks
- Annunciators
- Light-emitting Diode (LED) display designation signs

Capital investments in IT amenities is of approximately \$21,000. Six of the 16 vehicles have maximum seating and standing capacity of 41 people while the rest have a capacity of 44 people.

Table 35: DTS Operating	Hours b	y Vehicle
-------------------------	---------	-----------

# Operating and Maintenance Costs

The City outsources operations and maintenance of its trolley vehicles through public bids. Currently, the company contracted to provide these services is Limousines of South Florida (LSF). Based on the advertised RFP 2014-09 and LSF's submitted bid, the quoted cost per service hour is \$59.84 for operations, maintenance, fueling, and storage of trolley vehicles on a yearly basis. With a total of 27,800 hours quantified per year, the total bid amount was of \$1,663,552.00 per year.

Looking at total hours of operations (see **Table 35**), all of Doral trolleys run for approximately 155 hours on weekdays, 50 hours on Saturdays, and 13 hours on Sundays. This represents a total of 42,801 operating hours in 2019 given this year has 261 weekdays, 52 Saturdays, and 52 Sundays and excluding the 6 holidays the trolley is not operational. Given the yearly bid amount, Doral's operating and maintenance cost per hour of operations is \$38.87.

LSF is located at 3737 NW 43rd St, Miami, FL 33142 where they store, repair, and maintain the City's trolley. Drivers report to this facility and deadhead to their designated route starting point. The City does not own any facilities related to Trolley operations.

Furthermore, the City has contracted TSO Mobile to provide and manage the information technology infrastructure. The City spends \$279.82 monthly for IT services including Automatic Vehicle Location (AVL) GPS, Automatic Voice Information System (AVIS), Automatic Text Information System (ATIS), mobile application, one door Automatic People Counter (APC), cameras, AVAS, Wi-Fi, ETA solar signs, and driver tablet application.

# Survey of Trolley Drivers

In an effort to understand existing challenges and opportunities a survey of the trolley drivers employed by LSF was conducted on January 23, 2019. The afternoon crew was surveyed at 11:00 AM before they began their shift and the morning crew at 4:00 PM at the end of their shift.

During the meeting the purpose of the study was explained, and drivers were encouraged to provide their feedback, opinions, and recommendations on how to improve the existing trolley system. The drivers and operations personnel from Limousines of South Florida provided the following input:

 Poor lighting exists on bus stops at NW 114<sup>th</sup> Avenue and NW 58<sup>th</sup> Street (near the Sedano's Supermarket), and NW 52<sup>nd</sup> Street.

- Drivers complained about poor signal timing exists at the following intersections:
  - $\circ$   $\;$  NW 107<sup>th</sup> Avenue and NW 41<sup>st</sup> Street
  - NW 107<sup>th</sup> Avenue and NW 66<sup>th</sup> Street
  - NW 114<sup>th</sup> Avenue and NW 41<sup>st</sup> Street
  - $\circ$  NW 114<sup>th</sup> Avenue and NW 58<sup>th</sup> Street
- Queue length exceed the capacity of the eastbound left-turn bay on NW 97<sup>th</sup> Avenue and NW 33<sup>rd</sup> Street.
- Passengers have requested the following stops:
  - NW 112<sup>th</sup> Avenue and NW 41<sup>st</sup> Street (Potential transfer from Route 1 to Route 2)
  - $\circ$   $\;$  NW 107<sup>th</sup> Avenue and NW 14<sup>th</sup> Street
- Passenger respect for trolley driver and City property is an issue, especially with students on Route 1 since they put themselves and others at risk or disobey trolley policies (such as no drinking/eating, maintaining feet on the ground, etc.).
- Passengers also perform unsafe actions such as standing up and at times descending the door steps before the trolley comes to a full stop at a destination. Some passengers also stand almost in front of the trolley as it approaches bus stops.
- Frequently, the trolley is at capacity when it arrives at the Palmetto Metrorail Station transfer stop between 4:00 PM and 5:00 PM causing some passengers to want to overcrowd the vehicle.
- Due to the expected opening of the Dolphin Station Park-and-Ride, the only route servicing the NW 17<sup>th</sup> Street stop is Route 4 and not Route 1 and 4 as before. This temporary change is expected to be modified once the Park-and-Ride opens but some customers have expressed desire for Route 1 to service the stop again.
- Drivers suggest using NW 17<sup>th</sup> Street to connect to the Dolphin Mall as opposed to NW 14<sup>th</sup> Street due to traffic congestion and like Metrobus.
- Some passengers and drivers have noted that the one-way circulator routes are not efficient given the long distance a passenger must ride to go back to a missed stop or return to its original trip's origin. Some drivers recommended making routes linear and two-way.
- Drivers noted some blind/visually impaired passengers use the trolley with frequency, however, the drivers were unaware of ADA regulations such as making stop announcements inside transit vehicles at main points along a bus or train route. While the drivers have received training, an automated voice-over gives all the announcements through speakers installed in the vehicles. Some drivers reported trolley vehicles with malfunctioning voice-overs and the operations crew noted some vehicles arrived with wires cut to shut-off the system.

A total of 17 questionnaires were collected out of 20 handed out. Some drivers kept copies of the questionnaire and submit at a later time after the encounter. **Appendix A** includes blank samples of the questionnaire provided in both English and Spanish. **Appendix A** also provides a table comprised of answers provided by the trolley drivers.

## **Ridership Analysis**

Throughout the course of this study the trolley vehicle APCs were malfunctioning. City staff and TSO Mobile staff reported double counting and other errors in the data recorded by the APCs. Hence, ridership data was recorded through tally marks by drivers, but this method proved to be unreliable through several audits conducted by City of Doral staff. Furthermore, the City does not maintain a record of ridership data.

In March 2019, the City and TSO Mobile worked to retrofit the trolley vehicles APCs from side mounted systems to ceiling mounted systems to improve the recordkeeping accuracy of boarding and alighting. As of March 27, 2019, all trolley vehicles were retrofitted with the exception of DT09. Hence, ridership data presented in herein corresponds to the period of March 28, 2019 from 12:00 AM through April 10, 2019 at 11:59 PM. Trolley assignments during this period are presented in **Table 39**, where assignments of Trolley DT09 are highlighted given that the ridership data presented may exclude the boarding and alighting tin this trolley vehicle.

**Table 36** summarizes the total boarding and alighting by route for the period studied. This table shows that Route 1 has the highest ridership, followed by Route 3, Route 2, and then Route 4. The FIU route is the newest route in the system, which began service August 20, 2018, and is the only route not in service during the weekend.

Route	Boarding	Alighting	Total			
1	11,287	11,259	22,546			
2	2,543	2,348	4,891			
3	5,339	5,321	10,660			
4	1,909	1,820	3,729			
Total	21,703	21,333	43,036			

Table 36: Trolley Ridership Summa	ry from 03/28/2019 – 04/10/2019
-----------------------------------	---------------------------------

#### **Route Efficiency Analysis**

Using the route schedules and route lengths, Vehicle Miles Travelled (VMT) were estimated for each route. This calculation was performed by multiplying the estimated daily cycles a trolley vehicle does for a specific route and day times the route length. The estimate daily VMT was then multiplied by 10 and 2, depending on weekdays and weekends, to obtain the VMTs travelled by each vehicle in each route for two weeks. Each route's VMT in two weeks was aggregate to obtain an estimated total VMT per route. Hence, route efficiency (boarding per VMT) can be calculated to compare each route. **Table 38** shows that Routes 1 and 3 are the most efficient followed by Route 2 and 4. This proves that even though Route 1 has almost twice as much ridership than Route 3, Route 3 is as efficient in moving people as Route 1. Furthermore, if Route 4 achieves the same boarding as Route 2, Route 4 will become slightly more efficient than Route 2.

			Approximate Daily	Route Length	Daily	VMT in Two
Day	Day Route Block	Cycles	(Miles)	VМŤ	Weeks	
		1	7.5	24.80	186.00	1,860.00

## Peak Period Analysis

Boarding and alighting data were also obtained per hour for the same two-week period of March 28, 2019 from 12:00 AM through April 10, 2019 at 11:59 PM. Using this data, average daily boarding and average daily alighting were calculated for each route. The following graphs illustrate the distribution of demand on an average weekday. From these graphs the following conclusions were made:

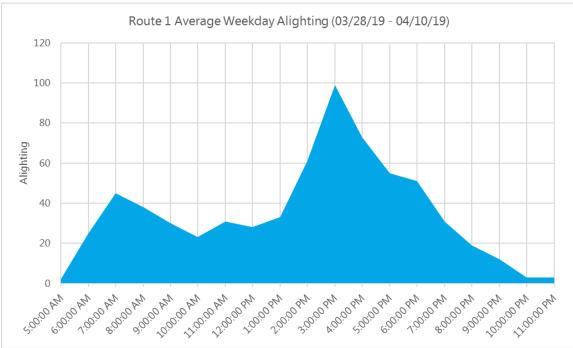

- Route 1
  - Boarding and Alighting AM peak hour is between 6:00 and 7:00 (commuters)
  - Between 9:00 AM and 1:00 PM boarding flatline around 40 people per hour
  - Boarding and Alighting PM peak hour is between 2:00 and 3:00 (commuters/schools)
- Route 2
  - Boarding and Alighting AM peak hours are between 6:00 and 9:00 (commuters)
  - Boarding and Alighting PM peak hours are between 4:00 PM and 6:00 PM
  - Boarding has a second PM peak between 8:00 and 9:00 (commuters)
- Route 3
  - Boarding and Alighting AM peak hour is between 6:00 and 7:00
  - Between 9:00 AM and 1:00 PM boarding flatline around less than 20 people per hour
  - Boarding has a second PM peak between 8:00 and 9:00
- Route 4
  - Boarding and Alighting AM peak hour is between 6:00 and 7:00
  - Boarding and Alighting PM peak hour is between 1:00 PM and 2:00 PM
  - Boarding has a second PM peak between 8:00 and 9:00

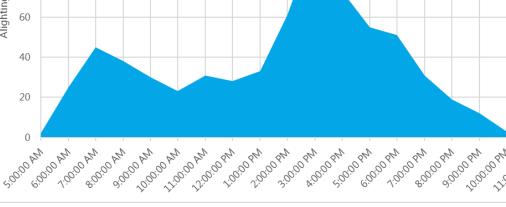

Other observations made include:

- Routes 1 and 3 are similar in that they demonstrate typical Directional Flow behavior imbalanced AM and PM peaks. Providing two-way service may balance the AM and PM demands.
- Existing headways for Routes 1 and 3 may be insufficient during peak demand
- Routes 2 and 4 have more balanced demand throughout the day but also have low demand

*Figure 34: Route 1 Average Weekday Boarding (03/28/2019 – 04/10/2019)*

## Stop Demand Analysis

**Table 40** through Table 47 list the highest and lowest ridership stops by route. Figure 42 through Figure 49 illustrate the average boarding and alighting by stop and by route. These tables and figures lead to the following conclusions:

- Route 1
  - The main customers of Route 1 are transferring from Metrobus at Dolphin Mall or Miami International Mall
  - Most high boarding stops are located in the northern residential area of the City
  - Some customers may be students at Millennia Atlantic University and Ronald Reagan Senior High School
  - Stop 1075 may likely represent trips to Walmart and other venues around NW 87<sup>th</sup> Avenue
  - It is likely most people using this route are housekeepers commuting to work in the homes of Doral residents or students and residents going home or performing secondary trips such as grocery shopping
- Route 2
  - Most trips are focus along NW 41<sup>st</sup> Street/NW 36<sup>th</sup> Street and NW 87<sup>th</sup> Avenue
  - Most likely users are workers going from Downtown Doral to the multiple commercial and institutional land uses along Doral Boulevard
- Route 3
  - Ridership is highly concentrated around the schools and residences of Doral
  - Palmetto Station is also highly demand along this route, more than Route 2, which confirms field observation
  - o Most likely customers are commuters and students
- Route 4
  - Most of the ridership demand is concentrated between NW 12<sup>th</sup> Street and NW 90<sup>th</sup> Street
  - Surprisingly, the FIU Modesto A. Maidique Campus had zero boarding and alighting during the period studied and the FIU Engineering Center had 68 boarding and 15 alighting, making it the 15<sup>th</sup> ranked stop in total count

# Travel Time Analysis

A travel time analysis of existing routes was performed using data automatically reported to TSO Mobile by the GPS trackers in each trolley vehicle. Through the TSO Mobile website, Geofences were created for each signalized intersection, route turning points, and route terminus. The geofences were created at the approach to an intersection or turning bay in order to differentiate the traveling direction of the trolley. **Figure 50** and **Figure 51** display to sample Geofences created for the intersection of NW 107<sup>th</sup> Avenue and NW 12<sup>th</sup> Street. Based on the Time In/Time Out reported for each trolley crossing each Geofence, time differences were calculated to obtain the travel time between two points. The analysis was performed for two consecutive weekdays starting on Wednesday, April 3 and ending on Thursday, April 4, 2019 as well as Saturday, April 13, 2019. **Table 48** summarizes the trolley vehicle assignments for these dates.

# Field Visit

Three field visits were conducted based on coordination with the City of Doral. The first field visit, on Wednesday, April 10, 2019, occurred from 6:00 AM to 10:00 AM. The second field visit occurred from 3:30 PM to 5:00 PM on Friday, April 13, 2019. The last field visit occurred Monday, April 16, 2019 from 2:20 PM to 4:00 PM. All visits looked at trolley vehicle and stop conditions as well as passenger and driver behaviors. In particular, the following stops were visited due various reasons.

- Stops 1006/4003 and 1007/4004 at International Mall
  - Serviced by Routes 1 and 4
  - Provides transfer to DTPW Routes 7, 36, 71, 137, 238, and 338
  - High ridership
- Stops 1010 and 1011 at Doral Academy Preparatory
  - Serviced by Route 1
  - Reported issues with student behavior
- Stops 1040/3033 and 1041/3034 at Ronald Reagan Senior High
  - Serviced by Routes 1 and 3
  - Reported issues with student behavior
- Stop 2001/3000 at the Palmetto Metrorail Station
  - Serviced by Routes 2 and 3
  - Reported issues with trolley drivers not waiting for passengers or coordinating service with the arrival/departure of Metrorail trains
  - High ridership
- Stops 1076 and 1077 at the Walmart/Sam's Club Commercial Center
  - Serviced by Route 1
  - Knowledge of complaints for lighting
  - Major grocery destination
- Stop 2050 at Doral CitiPlace
  - Serviced by Route 2
  - Newest mixed development in the City
  - Major leisure activity destination
- Stops 2003, 2006, 2058, and 2061 at Downtown Doral
  - Serviced by Route 2
  - Major employment and leisure activity destination

## Wednesday, April 10, 2019, from 6:00 AM to 10:00 AM

During this field visit the following observations were made:

- Stop 2001/3000 at the Palmetto Metrorail Station
  - Trolley drivers were seen waiting at the station parking lot for the Metrorail train to arrive and the bus stops to saturate with commuters
  - Wait periods lasted approximately 20 minutes
  - o 23 passengers were counted at 6:30 AM, with most riders taking Route 3
- Bus benches at all stops are metal with blue epoxy cover
- All stops have trash receptacles in clean and good condition
- Most stops have the ADA required 5 ft. by 8 ft. unobstructed landing pad for wheelchair access to the trolley
- Stops without shelters do not have route maps or schedules on display
- Some students were observed leaving the school early in morning a potential indication of truancy, of which trolley drivers have no enforcement authority
- Bus shelters have no interior lighting
- Most stops depended on roadway or surrounding land use for lighting
- Stop 1011 at Doral Academy Preparatory is adjacent to a freight distributor (Carisam-Samiel Meisel) which has limited in-site capacity for loading tractor trailer trucks, hence, trucks line up on the Double Left-Turn Lane for freight pickup in the mornings and afternoons
  - Five tractor trailer trucks were counted occupying the center lane during this visit with three others existing the facility
  - Truck drivers idle their trucks and dismounted to communicate with the operators and gatekeepers of the loading facility
  - Trucks exiting the facility were mounting the raised curbed and in brushing the landscaping located on the southside swale of NW 27<sup>th</sup> Street
- Trolley exit, ADA, and Title VI signs were clearly displayed
- Lighting within the trolley vehicles was poor
- Ceiling air conditioning units had condensation on the bottom surface which lead to water dripping on riders
- Wooden benches within the trolley vehicles are uncomfortable for long rides
- Hand railings, wheelchair ramp, and wheelchair restrains within the trolley vehicles were observed to be in good condition
- LED display designation signs were operational, but annunciators were not functioning
- TSO Doral mobile application was used but the interface was counterintuitive, difficult to track trolley vehicle, and planned trips based on ETA

### Friday, April 13, 2019, from 3:30 PM to 5:00 PM

During this field visit the following observations were made:

• Stops 1040/3033 and 1041/3034 at Ronald Reagan Senior High

- 10 students were observed waiting for the trolley with no issues observed
- Stops 1011 at Doral Academy Preparatory
  - Approximately 25 students were observed waiting for trolley
  - Bus stop was overcrowded
  - Heavy traffic along NW 27<sup>th</sup> Avenue in the eastbound comprised of mixed vehicle traffic
  - Heavier than normal traffic along NW 112<sup>th</sup> Avenue, both ways, comprised of mixed vehicle traffic
- Stops 1071 and 1076 at Walmart
  - 3 people were observed waiting for the trolley
- Stop 2011/3000 at Palmetto Metrorail Station
  - 3 people were observed waiting for the trolley
  - Heavy traffic on NW 74<sup>th</sup> Street
- The City's Trolley Tracker website

(http://publictransportation.tsomobile.com/webtracker/webtracker.htm?labels=false&tkn =582EB861-9C13-4C89-B491-15F0AFBF9F47&lan=en) was used instead of the TSO Doral mobile application and this website was found to be more reliable and easy to use for trip planning purposes

• CitiPlace Doral bus stop 2050 is approximately 1,135 feet away from the main entrance to the shopping center and lacks proper amenities to match existing land use

Figure 57: Dim Lighting in Trolley Vehicles

#### Monday, April 16, 2019 from 2:20 PM to 4:00 PM

During this field visit the following observations were made:

- Stops 1010 and 1011 at Doral Academy
  - $\circ$  40 students boarded the trolley, exceeding the stated capacity of 30
  - 14 passengers were standing
- Trolley skipped Stop 1012 (2617 NW 107<sup>th</sup> Avenue) because it was at maximum capacity
- Stop 1029 at Eugenia B. Thomas K-8
  - 6 students and adults boarded Route 1
- Stop 1030 (NW 114<sup>th</sup> Avenue just north of NW 60<sup>th</sup> Street)
  - 19 students boarded Route 1
- Stops 1040/3033 and 1041/3034 at Ronald W. Reagan Senior High School
  - o 10 students boarded Route 1, and all had to stand
- Stop 1042 (8600 NW 107<sup>th</sup> Avenue)
  - $\circ$  6 more students got on Route 1 and had to stand
- Normal student behavior observed during the whole trip
- Other non-student riders boarded and alighted at different locations
- Stop 1079 at the Dolphin Mall
  - $\circ$  3 people were waiting for Route 1

## MIAMI-DADE COUNTY DTPW

### Metrobus

Miami-Dade DTPW operates 11 Metrobus routes servicing the City of Doral. Most routes are concentrated on the southern half of the City, using NW 53<sup>rd</sup> Street, NW 41<sup>st</sup> Street/NW 36<sup>th</sup> Street and NW 25<sup>th</sup> Street as major east-west corridors; and NW 107<sup>th</sup> Avenue, NW 97<sup>th</sup> Avenue, NW 87<sup>th</sup> Avenue, and NW 79<sup>th</sup> Avenue as major north-south corridors. Metrobus routes connect Doral Government Center, Downtown Doral, Doral City Place, Miami-Dade College West, Dolphin Mall, Miami International Mall, and FIU's Engineer and Modesto A. Maidique campuses. **Figure 64** illustrates the 11 Metrobus routes and **Table 49** summarizes the major destinations and characteristics per route. **Appendix B** comprises of detailed route maps.

Metrobus ridership data for the period of January 1, 2014 through December 31, 2018 was analyzed using GIS tools. **Figure 65**, illustrates the average boarding per stop during the 4-year period study. This figure illustrates that the following locations have high boarding activity:

- 450 800 Weekday Average Boarding
  - Bus Stop D107#122 adjacent to Miami International Mall on NW 107<sup>th</sup> Avenue
  - Stop ID: D107#192 and Stop ID: D107#194 adjacent to Bed Bath & Beyond Plaza on NW 107<sup>th</sup> Avenue
  - Stop ID: D25S#825 adjacent to a Marathon gas station and the Miami International Commerce Center on NW 25<sup>th</sup> Street
- 200 450 Weekday Average Boarding
  - Stop ID: D36S#875 and Stop ID: 36ST87AS adjacent to Trump National Doral and the Doral Corporate Center on NW 36<sup>th</sup> Street
  - Stop ID: D87V#413 and Stop ID: D87V#411 adjacent to Trump National Doral and the American Welding Society (AWS) building on NW 87<sup>th</sup> Avenue
  - Stop ID: D36S#828 and Stop ID: D36S#825 adjacent to Polytechnic University and near CitiPlace Doral on NW 36<sup>th</sup> Street
  - Stop ID: D79V#504, Stop ID: D79V#521, Stop ID: 79AV53SW, Stop ID: 79AV53SE, Stop ID: D79V#532, and Stop ID: D56S79V5 adjacent to Downtown Doral and along NW 79<sup>th</sup> Avenue

**Figure 66** illustrates the average alighting per stop during the 4-year period studied. Similar to the average boarding, this figure illustrates that the following locations have high alighting activity:

- 450 800 Weekday Average Alighting
  - Bus Stop D107#122 adjacent to Miami International Mall on NW 107<sup>th</sup> Avenue
  - Stop ID: D107#192 and Stop ID: D107#194 adjacent to Bed Bath & Beyond Plaza on NW 1017<sup>th</sup> Avenue
  - Stop ID: D53S#848, Stop ID: D53S#845, and Stop ID: DORLP218 adjacent to Downtown Doral Charter Elementary School on NW 53<sup>rd</sup> Street
  - Stop ID: 79AV53SW, Stop ID: 79AV53SE, Stop ID: D79V#532 near Downtown Doral and at the intersection of NW 79<sup>th</sup> Avenue and NW 53<sup>rd</sup> Street
- 200 450 Weekday Average Alighting
  - Stop ID: D25S#825 adjacent to a Marathon gas station and the Miami International Commerce Center on NW 25th Street
  - Stop ID: D36S#875 and Stop ID: 36ST87AS adjacent to Trump National Doral and the Doral Corporate Center on NW 36<sup>th</sup> Street
  - Stop ID: D87V#413 and Stop ID: D87V#411 adjacent to Trump National Doral and the American Welding Society (AWS) building on NW 87<sup>th</sup> Avenue
  - Stop ID: D36S#828 and Stop ID: D36S#825 adjacent to Polytechnic University and near CitiPlace Doral on NW 36<sup>th</sup> Street
  - Stop ID: D79V#504, Stop ID: D79V#521, and Stop ID: D56S79V5 adjacent to Downtown Doral and along NW 79<sup>th</sup> Avenue

## Metrorail

Miami-Dade County also operates and maintains Metrorail (see **Figure 68**). Even though there are no Metrorail stations within the City, the Palmetto Station, located near NW 74<sup>th</sup> Street, is close enough to serve Doral's residents and visitors. Three years of ridership data were reviewed. **Table 52** provides Weekday, Saturday, and Sunday average daily boarding statistics for the period from October 2015 through September 2018. **Figure 67** comprises of a line chart showing the average daily boarding per month. The ridership data shows less people are using the Palmetto Station since October 2015, however, the change has been minimal. The spread in average daily boarding, as indicated by the Interquartile Range (IQR), is minimal for Weekdays and Saturdays but significant for Sundays. This means Weekday and Saturday daily boarding stay relatively close to the average of 1,540 and 440, respectively.

Statistic	Average Weekday Ridership	Average Saturday Ridership	Average Sunday Ridership
Average	1,540	440	275
Standard Deviation	136	58	47
IQR	161	56	56

Figure 68: Miami-Dade DTPW Metrorail Routes

# SOCIOCULTURAL CHARACTERISTICS

Sociocultural and economic data were assembled to understand current demand for transit. This data also provides a window into determining underserved communities and residents within the City of Doral and its immediate surroundings. Transportation mobility is extremely important because it gives people freedom of movement and the opportunity to reach socioeconomic progress. Understanding the composition of people and the probability of them using or needing transit creates room for improvement as routes and stops are tailored to serve specific demands. Hence, this section begins the journey in fulfilling two objectives of all transit agencies: improve ridership and provide social justice.

This section focuses on four Sociocultural Effect Issues (SCE):

- 1. Mobility
- 2. Land Use
- 3. Demographics
- 4. Economic

Mobility comprises of the modal choices, transportation disadvantages, and connectivity options people have depending on where they reside. This SCE highlights natural and artificial barriers to mobility that may need to be eliminated or circumvented to provide adequate transportation services. Land Use answers what activities are performed in the City and where those activities being performed. The purpose of this evaluation is to obtain a rough idea of origins and destinations as well as modes of transportations needed (e.g. trucks in industrial land uses). Demographics and Economic data provide a snapshot of potential transit users and identifies underserved communities that may require affordable transportation to subsist.

## Mobility

#### **Roadway Jurisdiction**

Roadways within the City of Doral are mostly owned and maintained by private homeowners' associations, organizations, or the City. This means the City has great flexibility in improving its infrastructure but also great responsibility in maintaining safe travel conditions and mobility options. Doral is home to multiple gated communities, large organizations, and industrial parks. Within these large land areas, the City has no maintenance responsibility. Doral's principal roadways are NW 19<sup>th</sup> Street, NW 33<sup>rd</sup> Street, NW 50<sup>th</sup> Street, NW 52<sup>nd</sup> Street, NW 54<sup>th</sup> Street, NW 90<sup>th</sup> Street, NW 112<sup>th</sup> Avenue/NW 114<sup>th</sup> Avenue, NW 102<sup>nd</sup> Avenue, NW 82<sup>nd</sup> Avenue, and NW 79<sup>th</sup> Avenue.

Miami-Dade County owns and maintains the major roadways within the City including NW 12<sup>th</sup> Street, NW 25<sup>th</sup> Street, NW 41<sup>st</sup> Street/NW 36<sup>th</sup> Street, NW 58<sup>th</sup> Street, NW 107<sup>th</sup> Avenue, NW 97<sup>th</sup> Avenue, and NW 87<sup>th</sup> Avenue. NW 74<sup>th</sup> Street will soon be transferred from County ownership to State ownership.

FDOT and MDX own and maintain major state roads surrounding the City boundaries. These roadways are SR 821/HEFT, SR 826/Palmetto Expressway, SR 836/Dolphin Expressway, and the NW 25<sup>th</sup> Street Viaduct.

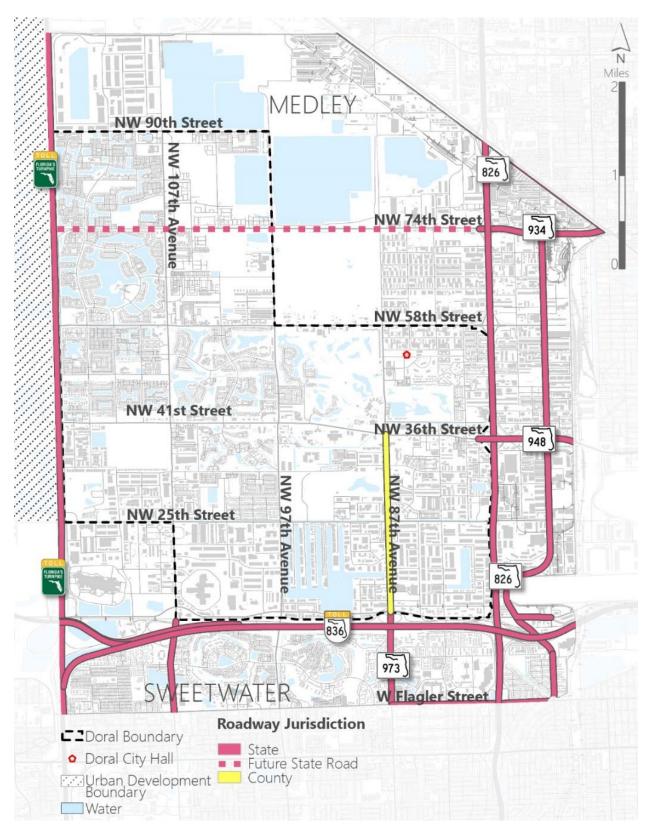

Figure 69: Roadway Jurisdictions

#### **Functional Classification**

**Table 53** summarizes the functional classification of roadways within the City limits.

Roadway	Functional Classification		
SR 821/HEFT	Principal Arterial – Other Freeways and		
	Expressways		
SR 826/Palmetto Expressway	Principal Arterial – Other Freeways and		
	Expressways		
SR 836/Dolphin Expressway	Principal Arterial – Other Freeways and		
	Expressways

97 <sup>th</sup> Avenue			
NW 50 <sup>th</sup> Street between NW 117 <sup>th</sup> Avenue and NW	Miner Collector		
107 <sup>th</sup> Avenue	Minor Collector		
NW 54 <sup>th</sup> Street between NW 87 <sup>th</sup> Avenue and NW 79 <sup>th</sup>	Minor Collector		
Avenue			

*Table 53: Routes Servicing High Boarding and Alighting Stops* 

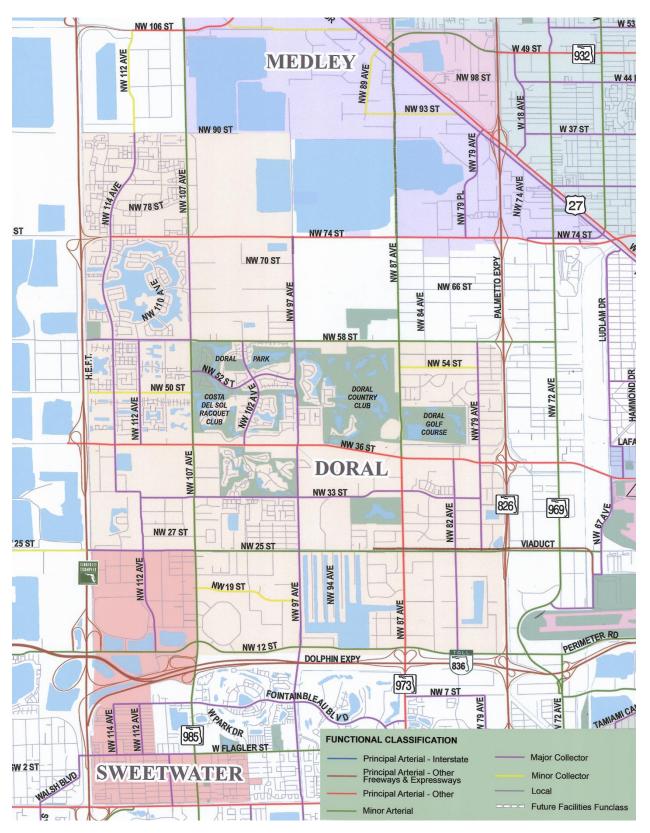

Figure 70: Roadway Functional Classification

#### <u>Walkability</u>

Redfin<sup>®</sup>, a real estate brokerage firm, developed a measure of walkability called Walk Score<sup>®</sup>. For each address, Walk Score<sup>®</sup> analyzes hundreds of walking routes to nearby amenities. Points are awarded based on the walking distance to certain amenities. Amenities within a 5-minute walk (or 0.25 miles) are given maximum points of 100. A decay function is used to give points to more distant amenities, with no points given for amenities 30-minute away.

Walk Score<sup>®</sup> also measures pedestrian friendliness by analyzing population density and road metrics such as block length and intersection density. Data sources include Google, Education.com, Open Street Map, the U.S. Census, Localeze, and places added by the Walk Score user community.

Walk Score <sup>®</sup> Description		
100 - 90	Daily errands do not require a car	
89 – 70	Most errands can be accomplished on foot	
69 – 50	Some errands can be accomplished on foot	
49 – 25	Most errands require a car	
24 – 0	Almost all errands require a car	

Table 54: Rout	es Servicing	High	Boarding	and Alighting	Stops

Doral has a Walk Score<sup>®</sup> of 42 points, meaning most errands require a car. Place in Doral where walkability is excellent include Downtown Doral and the neighborhoods immediately adjacent to the intersection of NW 107<sup>th</sup> Avenue and NW 41<sup>st</sup> Street, and NW 107<sup>th</sup> Avenue and NW 58<sup>th</sup> Street. These locations are similar because some residential units have sidewalk access to large commercial plazas that are anchored by supermarkets. These plazas usually have pharmacies and banks as well as restaurants and other amenities where most daily errands occur.

Walkability is an important mobility measure, especially for transit, because it is the cheapest mode of transportation and provides convenient first-last mile trips when the correct amenities and infrastructure are in place.

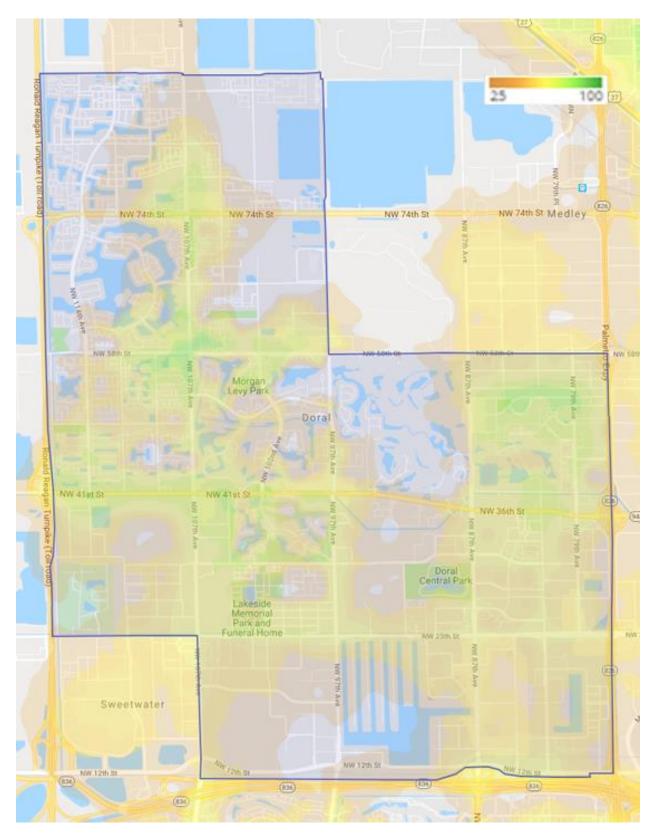

Figure 71: Red Fin Walk Score

#### Existing and Planned Bicycle Network

The existing bicycle network within the City is fragmented but plans are in place to complete this network. Most bicycle facilities are exclusive of other modes which is preferable over "sharrows". Most bicycle facilities are concentrated in the northern half of the City which also contains most of the residential areas in the City. South of NW 41<sup>st</sup> Street/NW 36<sup>th</sup> Street, the City is mostly comprised of industrial land use which tends to discourage cycling. However, providing mobility options for commuters in these industrial hotspots should not be overlooked. Looking at both existing and future bicycle infrastructure, the following gaps still exists:

- NW 114<sup>th</sup> Court/Path from NW 82<sup>nd</sup> Street to NW 90<sup>th</sup> Street
- NW 41<sup>st</sup> Street from NW 114<sup>th</sup> Avenue to NW 79<sup>th</sup> Avenue
- NW 97<sup>th</sup> Avenue from NW 52<sup>nd</sup> Street to NW 62<sup>nd</sup> Street
- NW 33<sup>rd</sup> Street from NW 112<sup>th</sup> Avenue to NW 107<sup>th</sup> Avenue
- NW 34<sup>th</sup> Street from Turnpike Trail to NW 112<sup>th</sup> Avenue
- NW 114<sup>th</sup> Avenue from NW 41<sup>st</sup> Street to NW 34<sup>th</sup> Street
- NW 87<sup>th</sup> Avenue from NW 41<sup>st</sup> Street to NW 25<sup>th</sup> Street
- NW 25<sup>th</sup> Street from NW 87<sup>th</sup> Avenue to NW 79<sup>th</sup> Avenue
- NW 79<sup>th</sup> Avenue from NW 25<sup>th</sup> Street to NW 41<sup>st</sup> Street

Similar to walking, cycling is a cheap alternative mode of transportation that is easily integrated with public transportation. Providing a complete network of exclusive bicycle facilities gives residents and commuters the option to bike between their final destinations and desired transit stop. This is essential in order to design an optimal transit system that is not extremely costly while meeting the highest transportation demands which are usually along principal corridors.

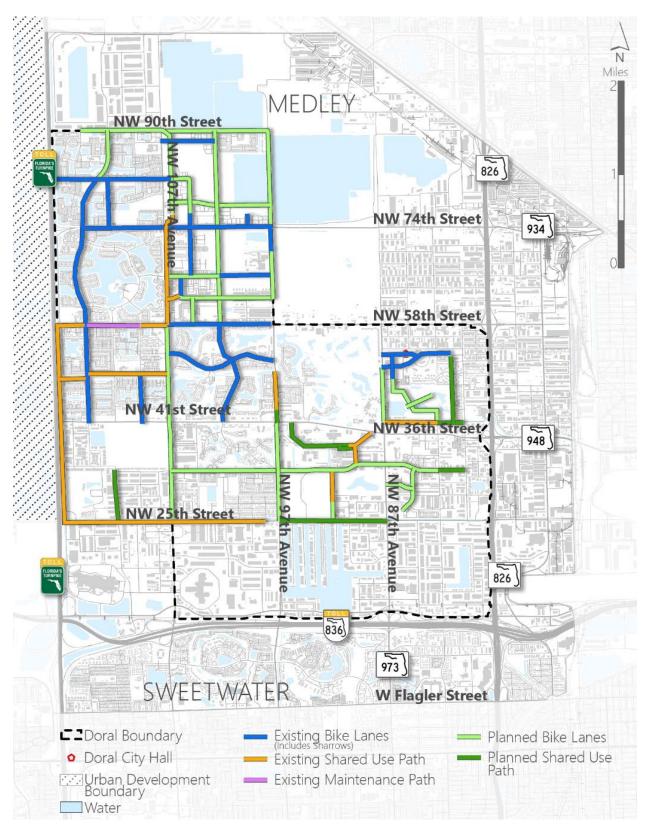

Figure 72: Existing and Planned Bicycle Network

## Land Use

#### Existing Land Use

Provided its history and presence of large organizations, Doral is full of industrial and commercial land uses. These job centers are mostly located south of NW 41<sup>st</sup> Street/NW 36<sup>th</sup> Street. It is important to distinguish sectors of the City since industrial areas have different transportation needs than residential or commercial areas. **Figure 76** illustrates the existing land use in the City of Doral.

However, the importance of Doral's industrial land use cannot be overlooked. With MIA ranking first in international freight and third in international passengers among United States airports in 2017, and PortMiami servicing over 5.5 million cruise passengers and 9.6 million freight tons, Miami has bolstering freight, logistics, and tourism industries. These industries require efficient distribution and logistics operations. Hence, Doral has grown as an industrial sector due to its proximity to the airport and railroad assets. **Table 55** illustrates the importance of the City to the County's overall freight and logistic industry. The Airport/Doral submarket, illustrated in **Figure 73**, is has the biggest inventory of warehouse and industrial real estate in the County. Provided industrial inventory construction, Doral is likely to remain as one of the top industrial area in the County.

Submarket	Total Inventory (Sq. Ft.)	Under Construction (Sq. Ft.)	Average Asking Lease Rate (\$/Sq. Ft./Industrial Gross Lease Rate)
Airport/Doral	59,510,516	208,000	10.28
Medley	43,128,546	350,000	9.10
Central Dade	38,318,817	59,959	8.64
North Central Dade	37,359,688	1,666,238	8.97
Hialeah	13,632,107	0	8.69
Kendall/Tamiami	12,364,984	0	11.06
Miami Lakes	8,355,691	724,117	9.41
Hialeah North	2,834,536	614,207	9.00
South Dade	4,812,833	0	10.07
North East Dade	2,832,607	0	12.78
Total	220,315,789	3,008,314	9.44

#### Table 55: CBRE<sup>®</sup> Miami-Dade Industrial Market Statistics (Q4 2018)

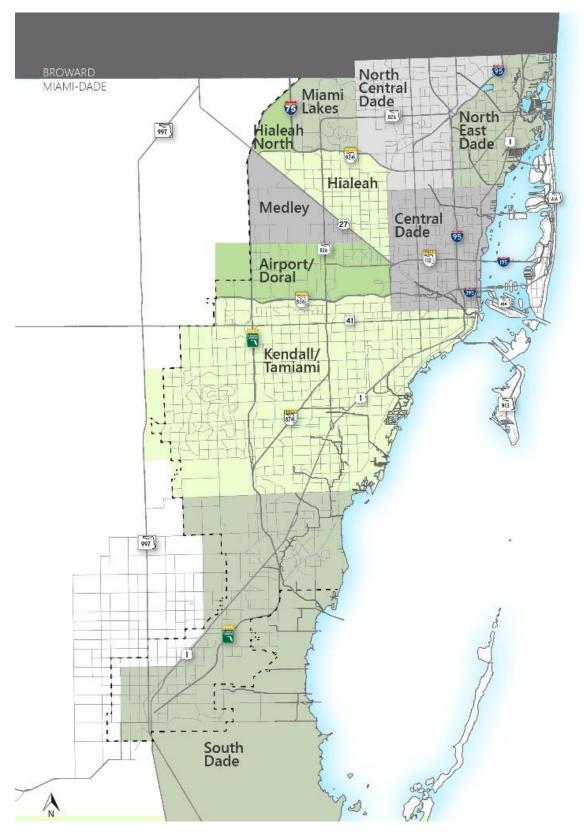

Figure 73: Miami-Dade Industrial Submarkets

The City, however, has no shortage of residential, commercial, and high-density mixed-used developments. Several major construction projects are ongoing which will bring a vast inventory of mixed uses to the City. **Table 56** and **Figure 77** through **Figure 79** summarize these developments.

Table 56: New Developments in Doral					
Project Name	Project Description	<b>Estimated Build Out</b>

Within the vicinity of the City major developments have also been complete or are underway. The Dolphin Park-and-Ride Station has been constructed but has not begun operating (see **Figure 74**). Adjacent to the station there are planned commercial and industrial developments (see **Figure 75**) and potential Transit Oriented Development (TOD). Within the City of Sweetwater, major densification is underway as part of the University City vision. And summarizes these developments.

Project Name	Project Description	Location
109 Tower	Retail: 4,500 Sq. Ft.	737 SW 109 <sup>th</sup> Ave.

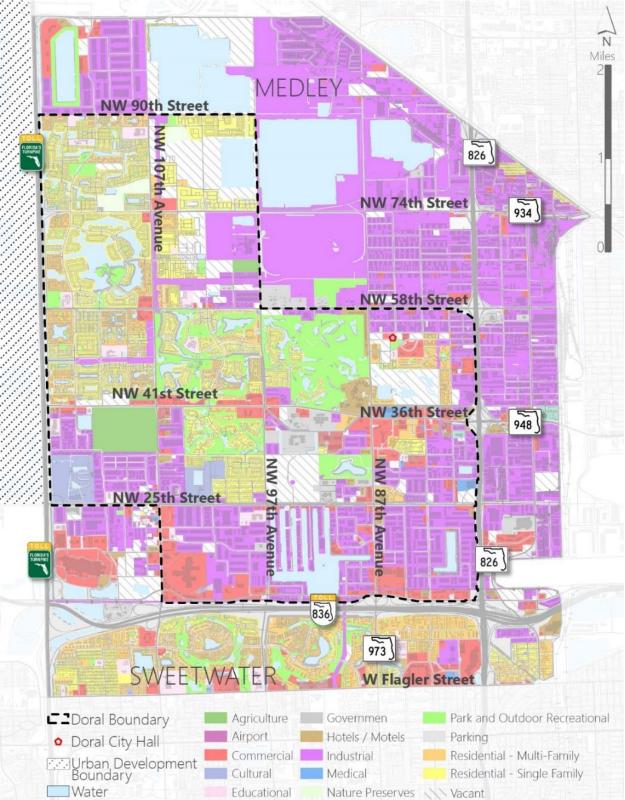

Figure 76: Existing Land Use

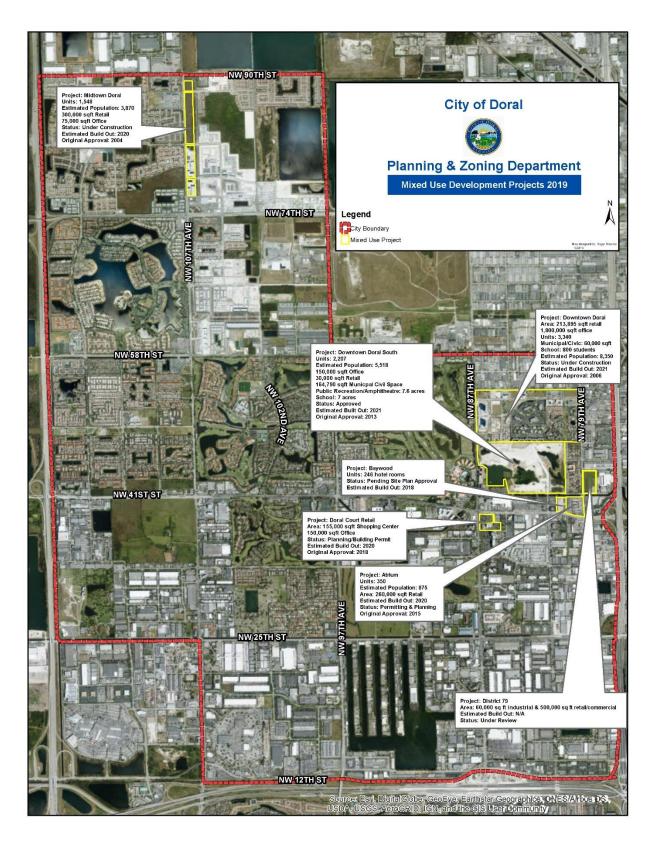

Figure 77: Doral Approved Mixed-Use Developments

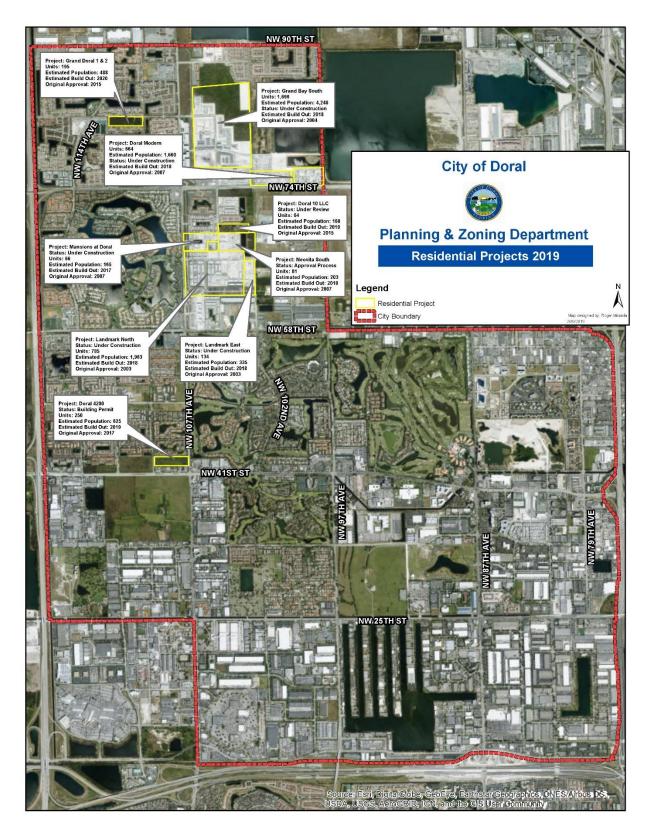

Figure 78: Doral Approved Residential Developments

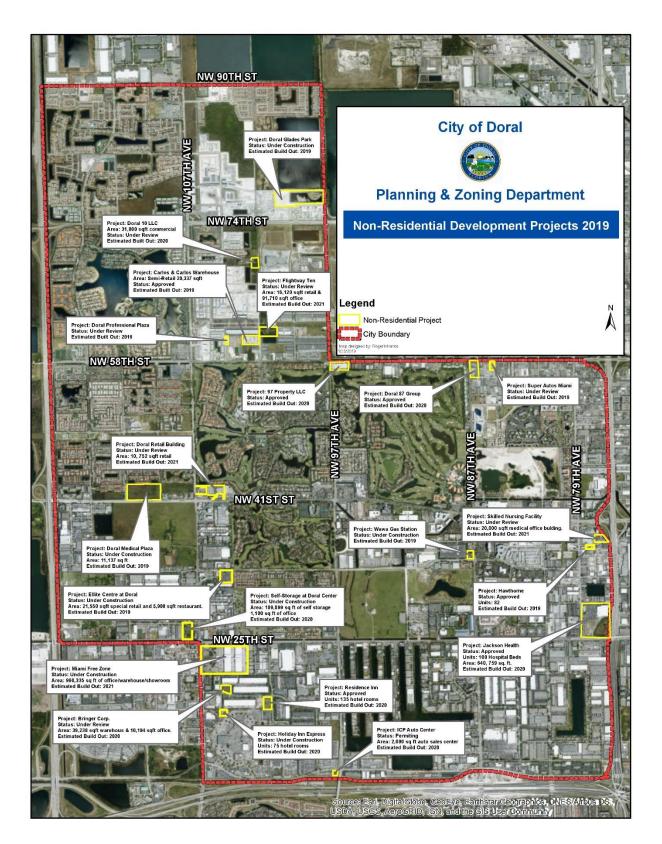

Figure 79: Doral Approved Non-residential Developments

April 2019

Future Land Use

Doral's adopted future land use map follows a similar trend as presented in the existing land use map. The City is expected to remain freight-intensive south of NW 41<sup>st</sup> Street/NW 36<sup>th</sup> Street and residential north of this east-west corridor.

Areas of anticipated redevelopment include the blocks of:

- NW 107<sup>th</sup> Avenue to NW 97<sup>th</sup> Avenue and NW 74<sup>th</sup> Street to NW 90<sup>th</sup> Street
  - Vacant and residential land use to high-activity commercial land use
- NW 87<sup>th</sup> Avenue to SR 826/Palmetto Expressway and NW 36<sup>th</sup> Street to NW 58<sup>th</sup> Street
   Vacant and single family to multi-family residential
- NW 117<sup>th</sup> Avenue to NW 107<sup>th</sup> Avenue and NW 25<sup>th</sup> Street to NW 41<sup>st</sup> Street
  - Vacant to industrial land use

Figure 80: Future Land Use

#### Future Annexations

The City of Doral has submitted several annexation applications to the County. If approved, these annexations will grant land use planning jurisdiction to the City for the following areas:

- Section 6, Township 53 South, Range 40 East bounded by NW 90<sup>th</sup> Street on the south, NW 107<sup>th</sup> Avenue on the east, NW 106<sup>th</sup> Street on the north, and the NW 117<sup>th</sup> Avenue Canal and Road Right-of-Way on the west
- Section 15, Township 53 South, Range 40 East bounded by the SR 826 to the east, NW 58<sup>th</sup> Street to the south, NW 87<sup>th</sup> Avenue to the west, and the north (said municipal boundary varies between NW 71<sup>st</sup> Street and NW 74<sup>th</sup> Street)
- Section 16, Township 53 South, Range 40 East, bounded by NW 58<sup>th</sup> Street on the south, NW 87<sup>th</sup> Avenue on the east, NW 74<sup>th</sup> Street on the north, and NW 97<sup>th</sup> Avenue on the west

Adjacent municipalities have also filed annexation applications. The Town of Medley, City of Miami Springs, City of Virginia Gardens, and City of Doral entered into an agreement, titled "Four City Agreement", in 2004 which defined the proposed new municipal boundaries. **Figure 81** illustrates the proposed new boundaries for the City's adjacent municipalities and the proposed annexations by the City of Doral.

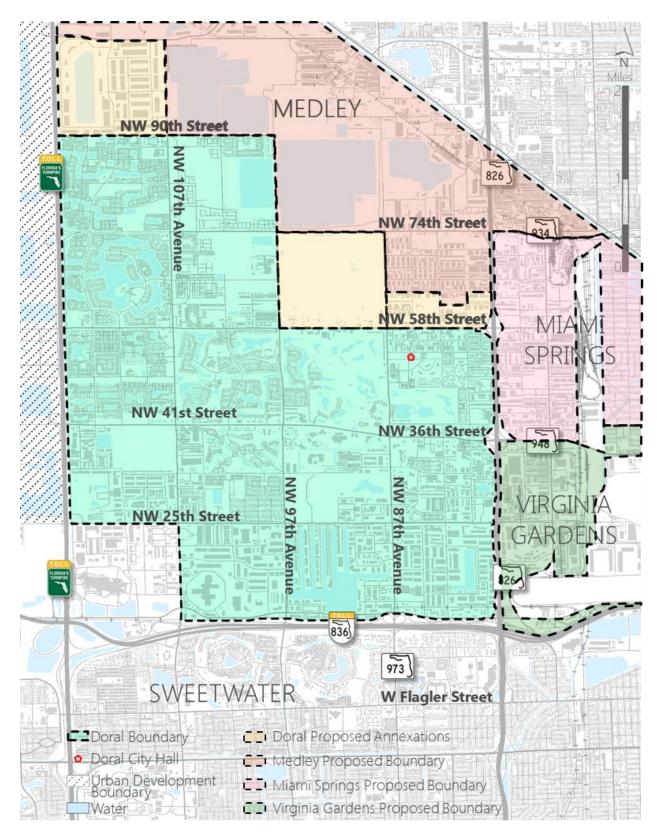

Figure 81: City of Doral and Adjacent Municipalities Annexations and Modified Boundaries

#### Neighborhood Fixtures

Providing transit service to neighborhood fixtures is an important mobility option for students, families, and elderly residents that spend most of their time at educational or public/open spaces. These fixtures are usually comfortable settings for low stress leisure pass-times such as reading and playing board games as well as sports. While transit may not always reach these locations due to balancing demands, understanding the location of these important fixtures also for an exploration of first-last mile connections and amenities needed to satisfy these types of trips.

Throughout the City of Doral there are multiple educational facilities. Most of these facilities are located along major roadways such as NW 25<sup>th</sup> Street, NW 41<sup>st</sup> Street/NW 36<sup>th</sup> Street/Doral Boulevard, and NW 107<sup>th</sup> Avenue. Public parks are more scattered but accessible through the existing DTS routes.

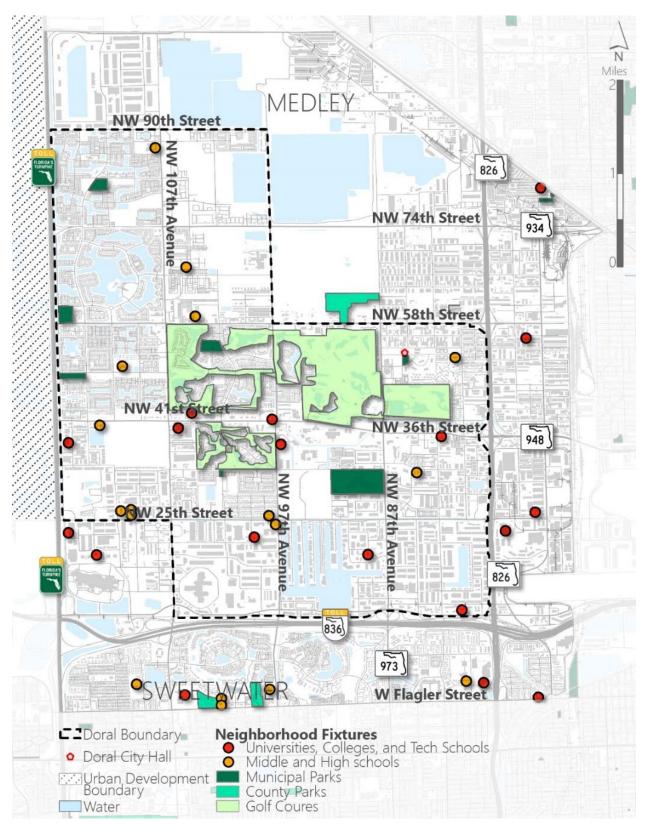

Figure 82: Neighborhood Fixtures

#### **Commercial Fixtures**

Aside from schools, universities, and parks, most non-commuting trips are between supermarkets/grocery stores and shopping centers. Grocery stores are usually co-located with pharmacies and other household essential supply stores. A successful transit system meets the greatest transportation demands. Since most trips occur either to work, school, or running errands, it is important to understand where these commercial fixtures are located within the City.

Aside from Dolphin Mall and Miami International Mall, most of these commercial fixtures are located along NW 107<sup>th</sup> Avenue, NW 41<sup>st</sup> Street/NW 36<sup>th</sup> Street, and NW 87<sup>th</sup> Avenue. These corridors are well served by existing DTS routes.

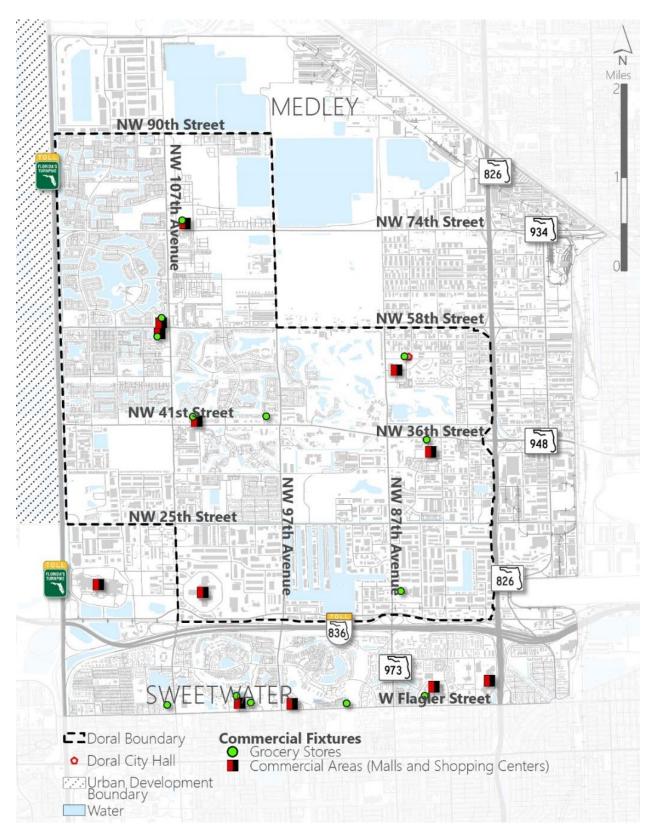

Figure 83: Grocery Stores and Shopping Centers

## Density of Restaurants and Bars

Similar to the Walk Score<sup>®</sup>, Redfin<sup>®</sup> also provides a density map of restaurants and bars throughout the City. The website states that there are approximately 415 restaurants, bars, and coffee shops in Doral. Most people in the City can walk to an average of 1 restaurant, bar or coffee shop in 5 minutes.

The food industry in Doral is mostly located in Downtown Doral, Doral CitiPlace, and the intersections of NW 107<sup>th</sup> Avenue and NW 41<sup>st</sup> Street, and NW 107<sup>th</sup> Avenue and NW 58<sup>th</sup> Street. **Figure 84** highlights five corridors where most restaurants, bars, and coffee shops are concentrated:

- NW 41<sup>st</sup> Street/NW 36<sup>th</sup> Street
- NW 25<sup>th</sup> Street
- NW 107<sup>th</sup> Avenue
- NW 87<sup>th</sup> Avenue
- NW 79<sup>th</sup> Avenue

These corridors represent high demand and may be suitable for lunch routes or other specialized transit services.

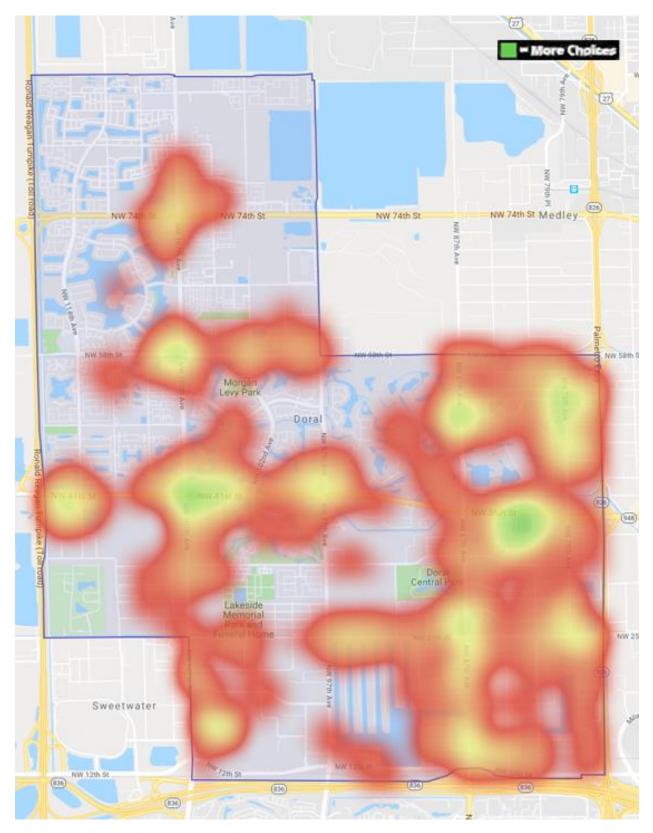

Figure 84: Density of Restaurants and Bars

## Employment Density

Employment destinations are important attractors to capture commuter trips. Doral is a major employment center within the County. Hence, it is imperative to understand where these destinations are located. **Figure 85** illustrates that most of the jobs in Doral are located south of NW 41<sup>st</sup> Street/NW 36<sup>th</sup> Street. This location coincides with the abundant warehouses and industrial parks within the City. North of NW 41<sup>st</sup> Street/NW 36<sup>th</sup> Street, the second area with most employment density in the City is around Downtown Doral and the Palmetto Metrorail Station.

Doral hosts major employers such as Carnival Cruise Lines, Blue Cross and Blue Shields of Florida, Brinks, Miami Herald, Perry Ellis, Univision, and many more. In addition, many important institutional agencies are in Doral such as U.S. Southern Command, Federal Reserve Bank of Atlanta, Miami-Dade Fire Rescue Headquarters, and Miami-Dade Police Department. These employers and public agencies are key stakeholders for the improvement and evolution of the DTS since they are major destinations.

Furthermore, many of the big organizations within the City have brand recognition and loyalty. Under certain circumstances, cobranding transit may be a good strategy to boost ridership, improve communication of route destinations, and as an additional revenue source. This strategy can also serve to provide specialized commuter routes where enough demand exists for an efficient operation.

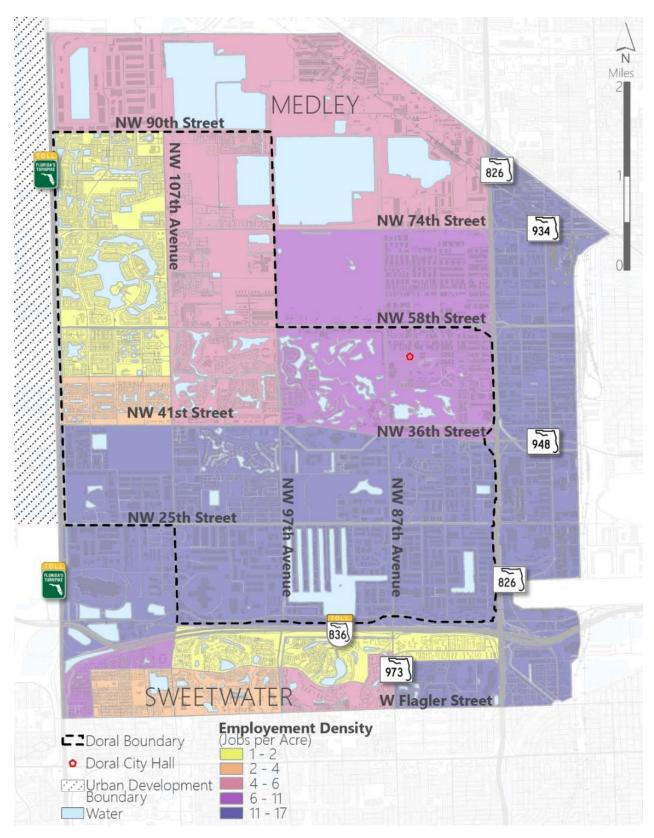

Figure 85: Employment Density

# Demographics

## Population Density

Doral is a quasi-suburban city of Greater Miami. While very metropolitan, the City has low population density due the presence of expansive industrial and office land uses. Throughout the northern half of the City, the population density is greater due to the concentration of residential land uses. This highlights a unique transportation characteristic of the City – the need to balance a high influx of commuters with the mobility demands of residents.

Given the City is also transforming into a major leisure destination with new entertainment centers, the City needs to accommodate additional trips from visitors/non-residents attracted to these centers. Hence, while population density may appear to be generally low throughout the City, Doral has a great influx of people every day.

Figure 86: Population Density

# Youth Population Density

Youth are considered a transit-dependent population given they commute to education centers, jobs, and parks while not yet being able to drive for themselves. Providing safe and efficient transit mobility for this demographic removes the burden of chauffeuring youth from parents; removing redundant trips from the roadway, improving parent's work stability, and potentially reducing family stress.

As expected, most of the City's youth population lives in the northern residential areas. The DTS currently provides good connections between these blocks and the Neighborhood Fixtures presented in **Figure 82**.

Figure 87: Youth Population Density

## **Elderly Population Density**

Elderly individuals are also considered transit-dependent due to the higher probability of mobility impairments such as impaired vision or reduced physical mobility restricting their ability to drive.

Overall, the City is comprised of a young population with an estimated median age of 35.3 (2013 – 2017 American Community Survey 5-Year Estimate). While the senior population is not significant (7.2% over 65 years old) and is mostly spread-out within the City, one location of stands out due to its high concentration of elderly citizens. This location is the quarter block bounded by NW 102<sup>nd</sup> Avenue to NW 97<sup>th</sup> Avenue and NW 52<sup>nd</sup> Street to NW 58<sup>th</sup> Street which comprises of the following residential associations surrounding Lake Lucas:

- Doral House Condominium
- Village of Doral Lakes
- Village of Doral Pines

The Green and Blue routes of the DTS serve this area through stops along NW 102<sup>nd</sup> Avenue and NW 52<sup>nd</sup> Street.

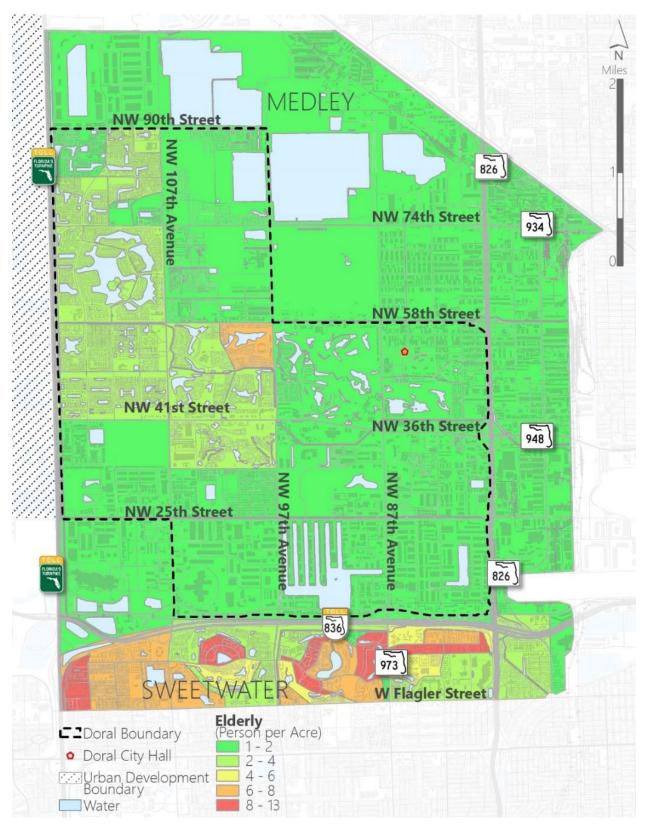

Figure 88: Elderly Population Density

# Minority Population Density

Historically, minority populations may be inadvertently segregated by mobility options due to the priorities of the majority being prioritized. It is extremely important that the DTS ensures minority populations' needs and concerns are heard and that the system is safe, non-discriminatory, and accessible for people to voice their concerns.

Within the City, most minority populations are located within the quarter block bounded by NW 102<sup>nd</sup> Avenue to NW 97<sup>th</sup> Avenue and NW 52<sup>nd</sup> Street to NW 58<sup>th</sup> Street. Other partial blocks that include minorities are bounded by:

- NW 112<sup>th</sup> Avenue to NW 107<sup>th</sup> Avenue and NW 82<sup>nd</sup> Street to NW 90<sup>th</sup> Street
- NW 117<sup>th</sup> Avenue to NW 107<sup>th</sup> Avenue and NW 50<sup>th</sup> Street to NW 58<sup>th</sup> Street

Figure 89: Minority Population Density

# Limited English Comprehension Population Density

Individuals with limited-English comprehension may find navigating the transportation network difficult. Additionally, these individuals may have difficulties securing jobs and achieving economic development. Providing a transit system that is accessible by residents of all ages and abilities is critical to protect the social justice these systems provide.

While the City's population has a strong English comprehension, one small pocket of medium English proficiency exists within the population of the Coronado at Doral homeowner's association.

Figure 90: Limited English Comprehension Population Density

# Low Educational Attainment Population Density

Low educational attainment is highly correlated to low economic development and income. Providing cheap and convenient transportation to individuals with such characteristics allows them to access higher paying jobs while maintaining their transportation expenses low.

Fortunately, the City of Doral is well educated with 95.4% attaining high school graduate or higher education. The current DTS routes provide good access to existing schools, universities, and other educational facilities. While the current population may not be as dependent on transit as other cities, it is still beneficial to maintain and improve access to educational facilities given higher education brings more specialized work that is beneficial to the local economy.

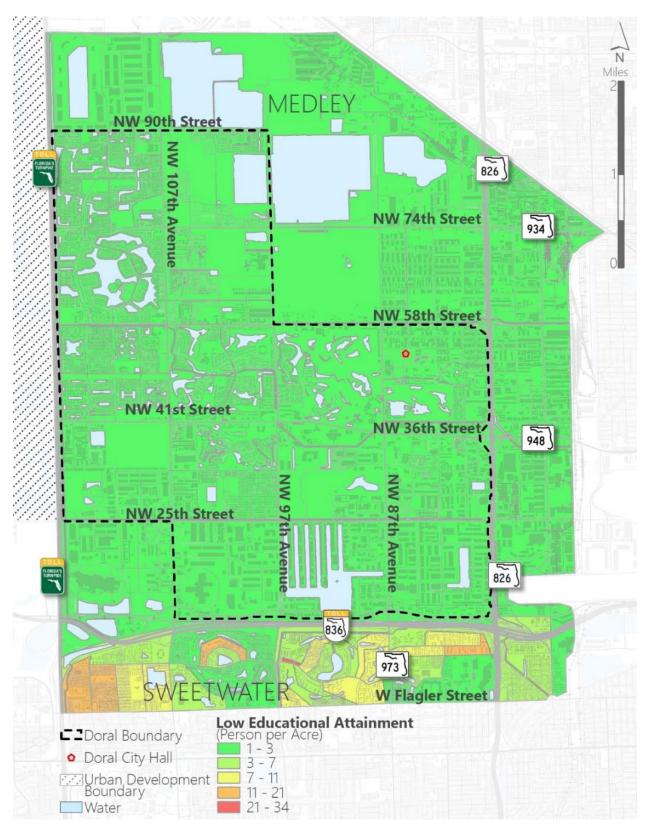

Figure 91: Low Education Attainment Population Density

# Veteran Population Density

Mobility impairments and disability are more probable to be present in within the City's veteran population than civilian population. This makes veteran's highly susceptible to depend on transit for transportation. Two areas of medium veteran concentration include the following blocks:

- NW 117<sup>th</sup> Avenue to NW 107<sup>th</sup> Avenue and NW 41<sup>st</sup> Street to NW 58<sup>th</sup> Street
- NW 102<sup>nd</sup> Avenue to NW 97<sup>th</sup> Avenue and NW 52<sup>nd</sup> Street to NW 58<sup>th</sup> Street

Figure 92: Veteran Population Density

# Economic

# **Unemployed Population Density**

While unemployment data varies given economic cycles, looking at the data can provide a snapshot of the City's more affordable hotspots given these areas may include workers with low skillsets contributing to structural unemployment.

As present in other data reviewed, the same locations pop-up in **Figure 93**. These locations are generally bounded by:

- NW 112<sup>th</sup> Avenue to NW 107<sup>th</sup> Avenue and NW 82<sup>nd</sup> Street to NW 90<sup>th</sup> Street
- NW 117<sup>th</sup> Avenue to NW 107<sup>th</sup> Avenue and NW 41<sup>st</sup> Street to NW 58<sup>th</sup> Street
- NW 102<sup>nd</sup> Avenue to NW 97<sup>th</sup> Avenue and NW 52<sup>nd</sup> Street to NW 58<sup>th</sup> Street
- NW 107<sup>th</sup> Avenue to NW 97<sup>th</sup> Avenue and NW 33<sup>rd</sup> Street to NW 41<sup>st</sup> Street
- NW 87<sup>th</sup> Street to SR 826/Palmetto Expressway and NW 36<sup>th</sup> Street to NW 53<sup>rd</sup> Street

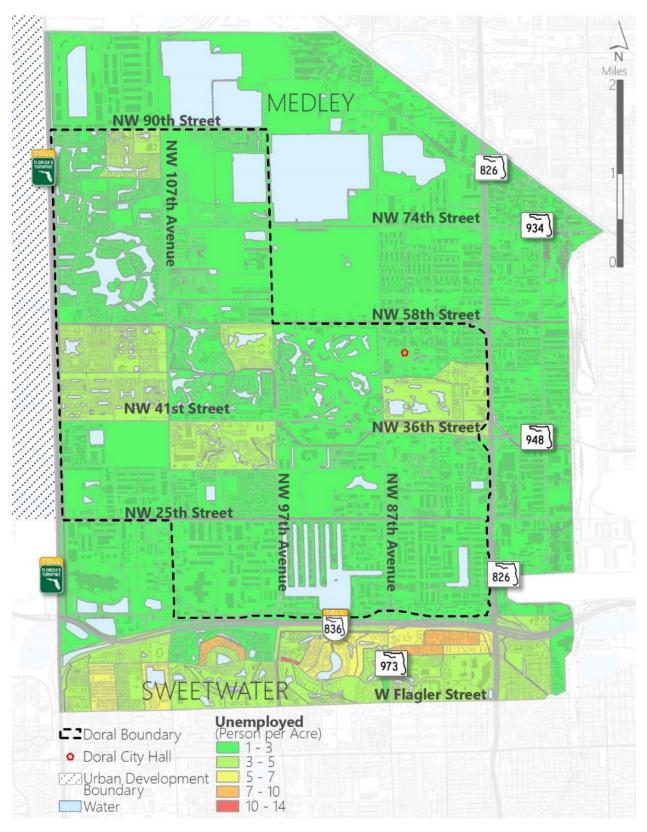

Figure 93: Unemployed Population Density

## Low Income Households

The citizens of Doral are wealthy compared to the rest of the County with a median household income almost \$30,000 greater than the County (2013-2017 American Community Survey 5-Year Estimates). While low-income household face challenging decisions regarding transportation affordability, this does not seem to be an issue for the households of Doral.

Like other socioeconomic data review, some spots within the City have relative lows, however, these areas are still well-off compared to the rest of the County. One alternative to consider is extending the DTS to serve less privileged communities outside of the City. This could be helpful by providing free transportation to low-wage workers that are unable to live within the City do to housing affordability. This allows for a double benefit: business within Doral can grow as accessibility is increased to workers while the lifestyle of non-resident workers improves.

Figure 94: Low Income Households

## Zero-Car Households

Zero-car households are transit dependent given they do not have the opportunity to drive a leased or owned vehicle. While these households are few in metropolitan, car-centric, cities such as Doral, it is important to target their location and provide transit accessibility.

In Doral, several developments stand out as potential targets for improved transit service/accessibility:

- Coronado at Doral
- Antilles Island of Doral
- Windsor at Doral
- Marriot's Villa at Doral
- Gran Vista at Doral

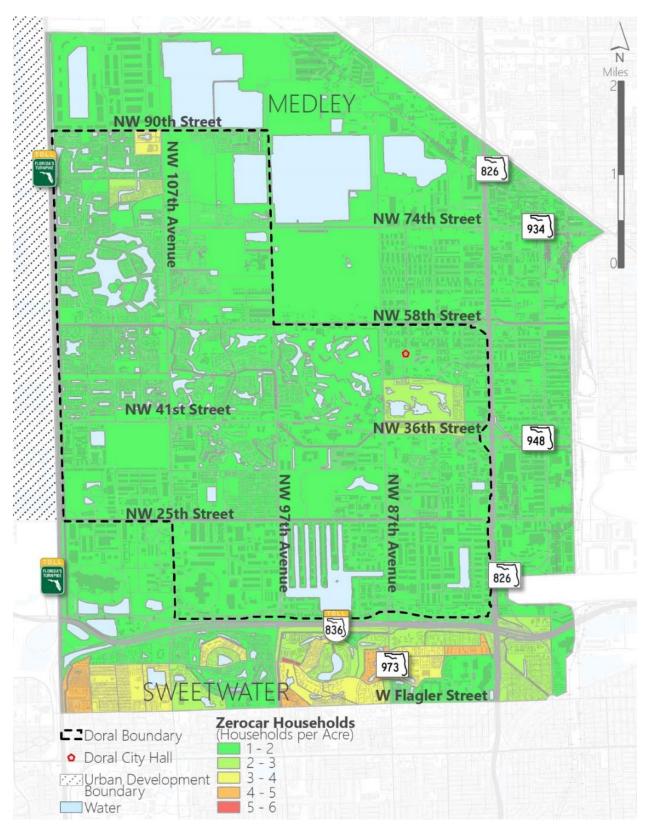

Figure 95: Zero-Car Households

# Transit Reliant Population Density

Transit reliant or transit dependent populations have limited mobility options due to one or multiple reasons including low-income, disability, low physical endurance, low-education, or lack of mobility options (e.g. zero-car households). **Figure 96** provides a snapshot of the transit dependent population in City and surrounding neighborhoods. Within the City of Doral, the highest concentration of transit reliant population resides within:

- Coronado at Doral
- Around Lake Lucas in the Villages of Doral Pines Guard and Doral Lakes as well as Doral House condominiums
- Within the area bounded by NW 50<sup>th</sup> Street to the south, NW 58<sup>th</sup> Street to the north, NW 117<sup>th</sup> Avenue to the west, and NW 107<sup>th</sup> Avenue to the east

However, more transit dependent people reside outside of Doral. These people are located within the City of Sweetwater and Fontainebleau census-designated area.

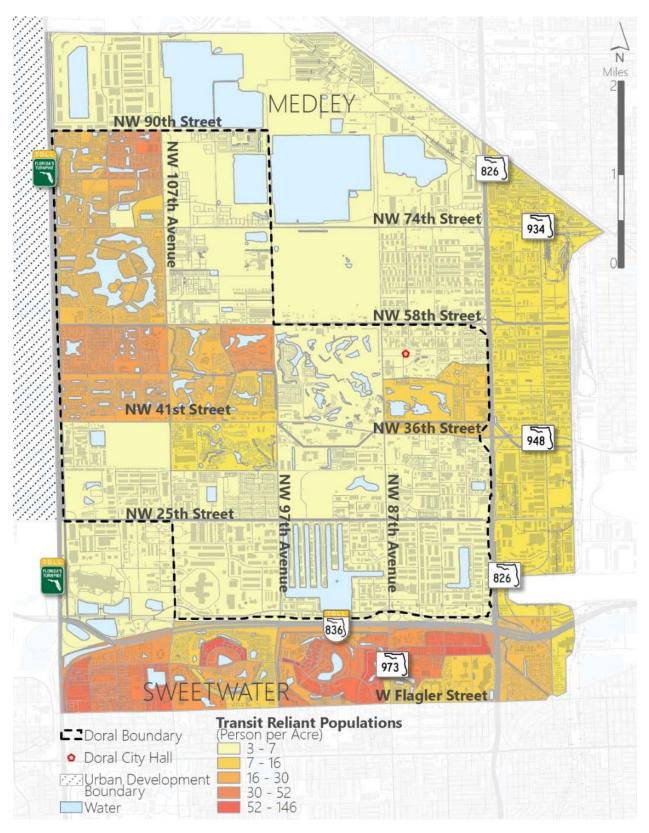

Figure 96: Transit Reliant Population Density

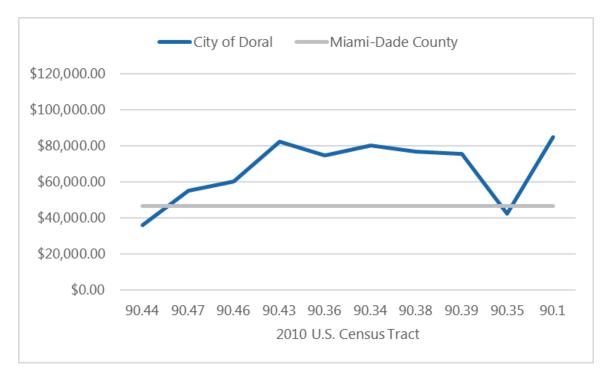

# Affordable Housing

Affordable housing is a subject of concern in Miami-Dade County. Researchers at <u>Harvard</u> <u>University's Joint Center for Housing Studies</u> have determined that the greater Miami metro area has the highest percentage of renters spending over half of their income on housing costs. Without affordable housing, people are not able to live close to employment and recreational locations. This creates a rise in long-distance transportation demand which is more expensive to service than short-distance transportation such as walking. Providing affordable housing promotes regional economic growth and helps employers attract and retain talent locally.

The University of Miami's Office of Civic and Community Engagement maintains an interactive online map called the <u>Miami Affordability Project (MAP)</u> which uses U.S. census data to illustrate housing affordability in the greater Miami area. This tool was used to develop **Figure 103** through **Figure 108**. From these figures, and the graphs preceding them, the following observations were made:

- The City of Doral has only one assisted housing development, called Doral Terrace, located on 10825 NW 50<sup>th</sup> Street. This For-Profit development has 256 units of which 184 (71%) have assisted-living.
- According to the 2017 American Community Survey performed by the U.S. Census Bureau, the median household income in Miami-Dade County was of \$46,338.00, in the U.S. was of \$60,336.00, and in the City of Doral was of \$76,184.00
- Approximately 30% of Doral residents have an income less than or equal to \$49,999.00
- Of 15,078 occupied housing units analyzed, 7,729 (51%) are owner-occupied and 7,349 (49%) are renter-occupied
- In the City, the *average median* household income of owners is of \$83,276.00 as compared with renters which is of \$59,604.40
- In Miami-Dade County, the median monthly owner cost of housing is of \$1,704 with a mortgage and of \$581 without a mortgage while the median gross rent is of \$1,195
- In the City of Doral, the median monthly owner cost of housing is of \$2,215 with a mortgage and of \$798 without a mortgage while the median gross rent is of \$1,834
- On average, approximately 49% of owners with mortgages, 19% of owners without mortgages, and 61% of renters are cost-burdened

# ISSUES AND OPPORTUNITIES

Throughout the existing conditions review many issues and opportunities came to light provided the multiple changes occurring around Doral; the operations, maintenance, and organization of the DTS; and the City's sociocultural characteristics. This concluding section summarizes the main challenges and areas of improvement for the DTS – therefore ending the review of existing conditions. Following this report, the study team will focus on developing infrastructure guidelines and alternative scenarios that will correct the identified issues and exploit the recognized opportunities to make the DTS efficient and convenient.

# **ISSUES**

### Operations

Issues observed with the existing trolley operations are mostly related to existing routing. All four routes provided are circuitous/long and have one-way operations. This means travelers sometimes need to travel through the entire route to reach a destination that was several miles in the other direction of the trolley route. In addition, the mobile trolley tracker application is counterintuitive to use and sometimes inaccurate. This leads to poor trip planning and inconvenience for trolley users. Moreover, the application is not synched with Miami-Dade DTPW's Metrorail and Metrobus tracking applications, making trip planning even more of a hazzle. Lastly, the street grid within the City is disjointed and has few north-south and east-west arterials. This leads to congestion on major roadways and delays. Hence, long routes are at risk of delays, which is especially worrisome during peak periods. Lastly, trolley capacity is often exceeded when school dismissal occurs. This can be solved with increased headways, increased frequencies, or specialized routing to tackle demand at key locations and during key periods of any given day.

### Vehicles

The old-timey trolley vehicle look may be adorable, but it surely is not comfortable. Wooden benches within the vehicles are hard on passengers riding the trolley for long to medium trips. Air conditioning units within the vehicles were also observed to condense water droplets that fall on passengers. These factors add up to more justifications for not using the trolley.

Trolley vehicles also have a steep step to board. This puts elderly and other populations at risk of falling or tripping. This characteristic, plus poor interior lighting, creates unwanted risk against safety and security in the trolleys. In addition, annunciators are usually disabled or not operational. This amounts to ADA concerns for visually and hearing-impaired riders that need to be informed of next stops and important locations to properly orient themselves.

### Infrastructure

Bus stops were observed to be in new conditions, however, they can be slightly improved. Stops with only lollipop signs and benches did not display route maps and schedules and did not have trash cans. Stops with shelters generally had trash cans but were missing bicycle parking and amenities. All stops had poor lighting and usually depend on adjacent developments or roadway lighting. Without proper lighting, safety and security become a concern for passengers. Trolley drivers also have a hard time identifying waiting customers during dark conditions.

# Sociocultural Characteristics

The City of Doral is fortunate since most of its residents are not transit-reliant and have high incomes as compared to the County and the nation. This however, creates a challenging environment for transit. Incentivizing residents to use the trolley means transit trips need to be more convenient than car trips and serve secondary destinations such as restaurants, leisure centers, and malls. Today, however, a lot of the existing users are transit-reliant and come into the City to work. Commuters transferring from Metrorail and Metrobus, as well as students moving around the City, have different demands than residents.

Mobility wise, the City also has poor first/last mile connections. Walking and cycling trips are rare within Doral and will likely stay this way until a comprehensive network of bicycle facilities and wide sidewalks is complete. While opposition to this idea may exists, walking and bicycling around major transit stops should be prioritized in order to increase safety and convenience of using the trolley.

# **OPPORTUNITIES**

## Operations

Improvements to existing routes can take the shape of shorter routes with two-way service. This allows the DTS to service high demand corridors really well and grow its ridership. With growing ridership, demand pressures will lead to new routes that may expand coverage and better serve all residents. This strategy also leads to a focalized infrastructure plan where bus lanes, queue jumps, and Transit Signal Priorities can be implemented on select arterials. This will further encourage users to use the trolley and improve reliability. Lastly, integration of tracking applications is key to providing customer service. Not only does the trolley tracker need to synch with DTPW services, but also other trolleys on the peripheries of the City.

### Vehicles

Trolley vehicles can be upgrade to a more modern design to attract more riders. This change can also lead to increase customer service through innovative designs that make boarding and alighting easy, safe, and convenient for users of all ages and abilities. Vehicles should also strictly conform to ADA guidelines. Furthermore, the City can explore vehicle automation and launch pilot projects to energize transit discussions and innovate as a Smart City.

Lastly, cobranding opportunities exists. With refined routes and discussions with major employers and organizations, the DTS can be easily associated with great brands that lead to easy destination recognition and increased customer awareness. A great example of a cobranding opportunity is Route 4 and FIU.a

April 2019

Limousines of South Florida Driver Questionnaire and Results

## Limousines of South Florida (LSF)

### **CITY OF DORAL TROLLEY DRIVERS QUESTIONNAIRE**

Driver Age:	<19	20 – 29	30 - 39	40 - 49	50 – 59	60 - >69
Total Driver E	xperienc	ce:		(years	)	
Driver's Exper	rience w	th the City of	Doral:		(years	)
Currently Ass	igned Ro	oute:				
Currently Ass	igned Sł	nift:				

#### Performance

- 1. How often are scheduled times met?
- 2. In your opinion, what is/are the biggest factor(s) affecting on-time performance?
- 3. At what time does the peak period occur?
- 4. What intersection(s) experiences the most delays?
- 5. What segment of your route experiences the most traffic and delays?

#### CUSTOMER SATISFACTION

- 6. Are there any additional stops requested by riders?
- 7. Are there any additional streets/corridors requested by riders to be serviced?
- 8. What are some complaints made by the riders?

9. How can the on-board experience be improved for passengers?

#### INFRASTRUCTURE

- 10. How can the trolley stops/shelters be improved?
- 11. How accessible are the vehicles for all riders? (i.e. passengers with disabilities, bicyclist, etc.)
- 12. Are there any issues with seating capacity of the vehicle?
- 13. How well do the vehicles perform?
- 14. Are there any mechanical issues frequently experienced by the vehicles?
- 15. Are there any suggestion that could improve passenger or driver safety?
- 16. Is there any technology you could envision improving the Trolley experience?

#### System Overview

- 17. What are some system deficiencies you have observed?
- 18. What could improve the overall performance of the Trolley System?
- 19. What policy changes could help you do your job better?

## Limousines of South Florida (LSF)

### ENCUESTA PARA LOS CONDUCTORES DEL TRANVÍA DE LA CIUDAD DEL DORAL

Edad del conductor:	<20 – 29	30 – 39	40 - 49	50 – 59	60 - >69
Experiencia total del co	onductor:			(años)	
Experiencia del condu	ctor con la ciu	idad del Doral:			(años)
Ruta actualmente asig	nada:				
Jornada actualmente a	asignada:				

### Desempeño

- 1. ¿Con qué frecuencia se cumplen los horarios programados?
- 2. En su opinión, ¿cuál es/son los factores más importantes que afectan el rendimiento a tiempo?
- 3. ¿A qué hora ocurre la mayor congestión de tráfico?
- 4. ¿Qué intersección(es) experimenta(n) más retraso(s)?
- 5. ¿Qué segmento de su ruta experimenta más tráfico y retrasos?

### SATISFACCIÓN DEL CLIENTE

- 6. ¿Hay paradas adicionales solicitadas por los pasajeros?
- 7. ¿En cuales calles fuera de la ruta solicitan parar los pasajeros?
- 8. ¿Cuáles son algunas quejas hechas por los pasajeros?

9. ¿De qué manera se puede mejorar la experiencia del pasajero a bordo del tranvía?

#### INFRAESTRUCTURA

10. ¿Cómo se pueden mejorar las paradas del tranvía?

11. ¿Qué tan accesibles son los vehículos para todos los pasajeros? (es decir, pasajeros con discapacidades, ciclistas, etc.)

12. ¿Hay algún problema con la cantidad de asientos en los vehículos?

13. ¿Qué tan bien funcionan los vehículos?

14. ¿Hay algún problema mecánico que ocurre con frecuencia?

15. ¿Hay alguna sugerencia que podría mejorar la seguridad de los pasajeros o del conductor?

16. ¿Hay alguna tecnología que pueda para mejorar la experiencia en el tranvía?

#### **RESUMEN DEL SISTEMA**

17. ¿Cuáles son algunas deficiencias del sistema de tranvía que ha observado?

- 18. ¿Qué podría mejorar el rendimiento general del sistema de tranvía?
- 19. ¿Qué cambios de póliza podrían ayudarte a hacer un mejor trabajo?

# **APPENDIX E**

**Outreach Presentations and Meeting Materials** 

## Limousines of South Florida (LSF)

### **MEETING MINUTES**

#### Attendees:

Carlos Cejas (Gannett Fleming)

Cecilia Cruz (LSF Operations)

Shirley Forero (City of Doral Transit Operations Manager)

Juan Fraga (LSF General Manager)

Ivan Jimenez (Gannett Fleming)

Jose Millano (LSF Operations Manager)

20 Trolley Drivers (10 drivers during the AM meeting and 10 drivers during the PM meeting)

#### Time:

11:00 AM - 12:00 PM and 4:00 PM - 5:00 PM

#### Notes:

During the meeting Shirley Forero and Ivan Jimenez explained the purpose of the transit study, encouraged trolley drivers to provide their feedback, opinions, and recommendations on how to improve the existing trolley system, and review the driver questionnaire to clarify any doubts/questions. The drivers and operations personnel from Limousines of South Florida provided the following input:

- Poor lighting exists on bus stops at NW 114<sup>th</sup> Avenue and NW 58<sup>th</sup> Street (near the Sedano's Supermarket), and NW 52<sup>nd</sup> Street.
- Drivers complained about poor signal timing exists at the following intersections:
  - NW 107<sup>th</sup> Avenue and NW 41<sup>st</sup> Street
  - NW 107<sup>th</sup> Avenue and NW 66<sup>th</sup> Street
  - NW 114<sup>th</sup> Avenue and NW 41<sup>st</sup> Street
  - NW 114<sup>th</sup> Avenue and NW 58<sup>th</sup> Street
- Queue length exceed the capacity of the EB left-turn bay on NW 97<sup>th</sup> Avenue and NW 33<sup>rd</sup> Street.
- Passengers have requested the following stops:
  - NW 112<sup>th</sup> Avenue and NW 41<sup>st</sup> Street (Potential transfer from Route 1 to Route 2)
  - $\circ$   $\;$  NW 107<sup>th</sup> Avenue and NW 14<sup>th</sup> Street

- Passenger respect for trolley driver and City property is an issue, especially with students on Route 1 since they put themselves and others at risk or disobey trolley policies (such as no drinking/eating, maintaining feet on the ground, etc.).
- Passengers also perform unsafe actions such as standing up and at times descending the door steps before the trolley comes to a full stop at a destination. Some passengers also stand almost in front of the trolley as it approaches bus stops.
- Frequently, the trolley is at capacity when it arrives at the Palmetto Metrorail Station transfer stop between 4:00 PM and 5:00 PM causing some passengers to want to overcrowd the vehicle.
- Due to the expected opening of the Dolphin Station Park & Ride, the only route servicing the NW 17<sup>th</sup> Street stop is Route 4 and not Route 1 and 4 as before. This temporary change is expected to be modified once the park & ride opens but some customers have expressed desire for Route 1 to service the stop again.
- Drivers suggest using NW 17<sup>th</sup> Street to connect to the Dolphin Mall as opposed to NW 14<sup>th</sup> Street due to traffic congestion and like Metrobus.
- Some passengers and drivers have noted that the one-way circulator routes are not efficient given the long distance a passenger must ride to go back to a missed stop or return to its original trip's origin. Some drivers recommended making routes linear and two-way.
- Drivers noted some blind/visually impaired passengers use the trolley with frequency, however, the drivers were unaware of ADA regulations such as making stop announcements inside transit vehicles at main points along a bus or train route. While the drivers have received training, an automated voice-over gives all the announcements through speakers installed in the vehicles. Some drivers reported trolley vehicles with malfunctioning voice-overs and the operations crew noted some vehicles arrived with wires cut to shut-off the system.

A total of ten questionnaires were collected out of 20 handed out. Some drivers kept copies of the questionnaire to fill-out and submit later.

## Doral Trolley/SMART Plan Study Internal Coordination MEETING MINUTES

#### Attendees:

Rita Carbonell (City of Doral Project Manager) Shirley Forero (City of Doral Transit Operations Manager) Nelson Mora (Gannett Fleming Task Manager) Ivan Jimenez (Gannett Fleming Project Intern) <u>Phone:</u> Carlos Cejas (Gannett Fleming Senior Technical Advisor)

#### Time:

2:00 PM - 4:00 PM

#### Location:

City of Doral Government Center 8401 NW 53<sup>rd</sup> Terrace, Doral, FL 33166

#### Notes:

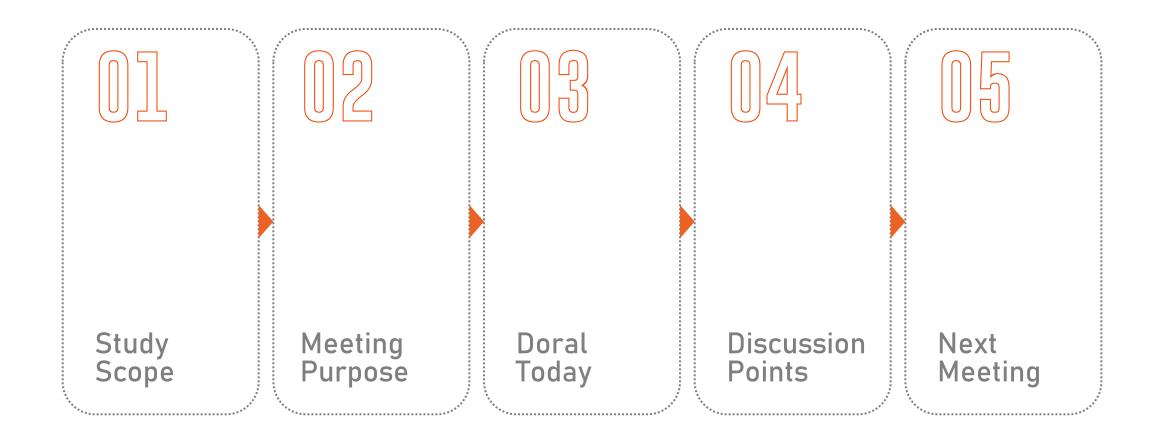

The following items were discussed during this meeting:

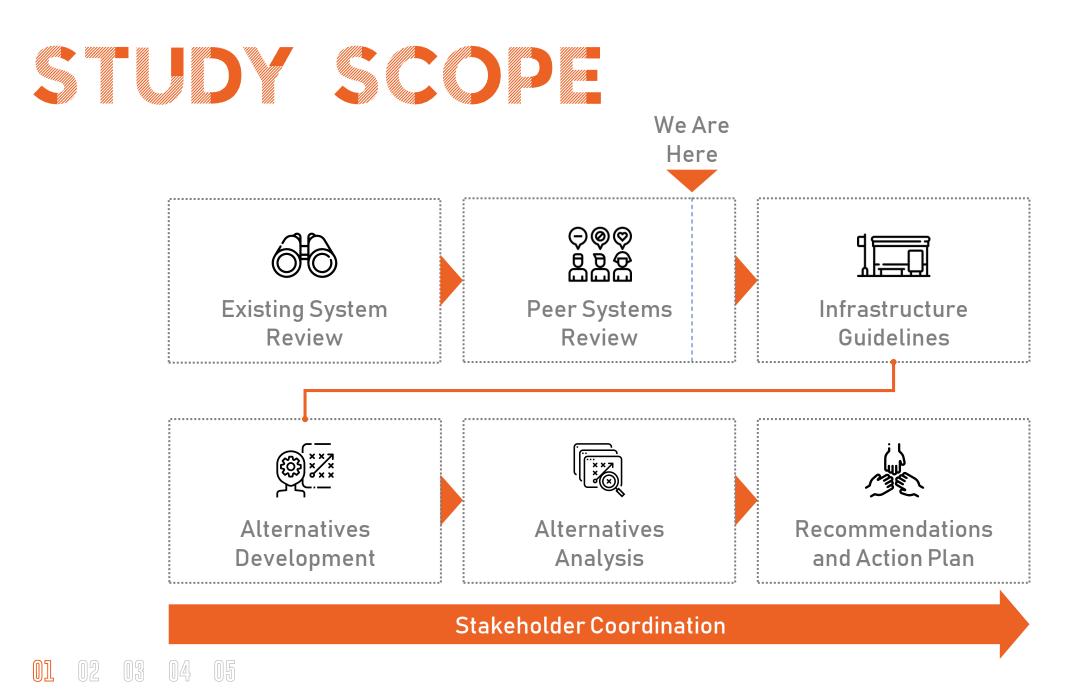

- TSO Mobile website hosts the trolley travel time and route assignment data
- Automated People Counters (APCs) are being installed in the trolleys and installation should be complete by Mar. 8
  - Ridership data may be available at the end of March
- The City could consider adding bicycle automated counters as well
- FR Aleman is preparing a prototype shelter design for the City
- The City is open to new ideas regarding the look of trolley vehicles, branding, and street furniture
- Branding efforts were being coordinated given the Doral Boulevard Master Plan and the opening of Doral Yards (which will incorporate murals and street art)
- A six (6) month pilot program with FreeBee will begin operations soon as well as CitiBikes in Downtown Doral
- The City is going to develop an asset inventory and management system
- Coordination with the City of Medley has occurred before because they are interested in Doral operating a trolley service within Medley
- The City conducts weekly vehicle inspections
- The City is in favor of route simplification by making routes more linear (travelling in both directions) as opposed to circular
- The City is in favor of pedestrian/bicycle improvements
- The City wants to evaluate a Lunch Route and a Sunday Church Route for Lady of Guadalupe

Doral Trolley/SMART Plan Coordination Study Stakeholder Coordination Meeting 03.20.2019

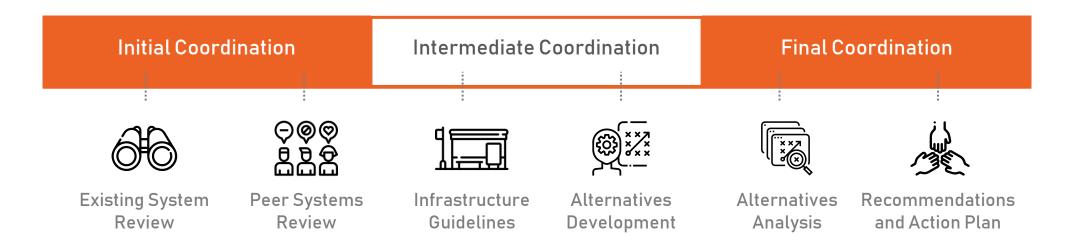

# STUDY SCOPE

# We Are Here

# MEETING PURPOSE

We want to gather your organization's thoughts and ideas about the City of Doral's transportation system;

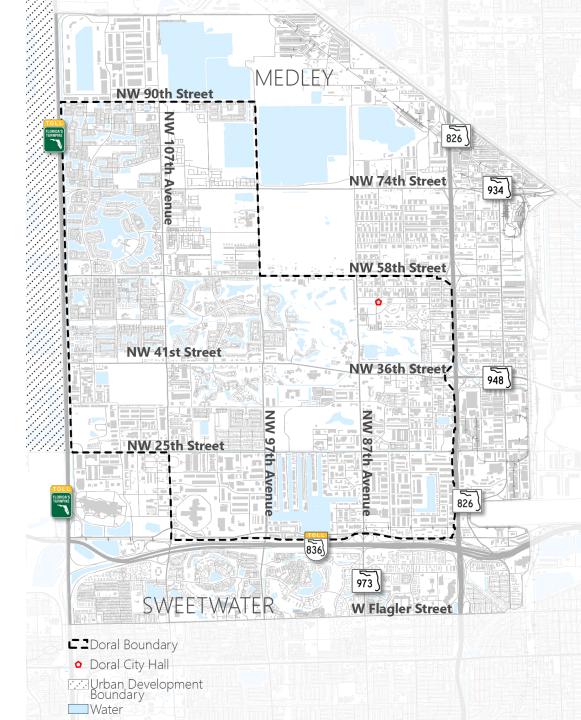

- What are the issues?
- How can it improve?
- How can it evolve?

### **Business Stakeholders Meeting #1**

#### POST EVENT SURVEY

Thank you for attending the **Doral Trolley/SMART Plan Study** stakeholder meeting this past Wednesday. We would like to capture your comments and obtain your feedback to make our next event better. This will only take 2 minutes...

#### Ok, I got 2 minutes

1. Overall, how would you rate the event?

1 – 5 Stars

- 2. Thanks! For more detail, how would you rate the following:
  - a. Speakers?
  - b. Content?
  - c. How the event was organized?
- 3. How likely are you to recommend other businesses to attend the next meeting?
  - a. 0 (Not at all likely) 10 (Extremely likely)
- 4. And how likely are you to attend the next meeting?
  - a. 1 (Not at all likely) 5 (Extremely likely)
- 5. Great. Now let's talk about the content. Please rank the Discussion Points from most needed to least.
  - a. Land Use

i. 1–5

b. Mode

i. 1–5

c. Technology

i. 1–5

d. Branding

i. 1–5

e. Policy

i. 1–5

- 6. Which of the Discussion Points is your organization *most* likely to adopt?
  - a. Land Use, Mode, Technology, Branding, Policy
- 7. Now which of the Discussion Points is your organization *least* likely to adopt?
  - a. Land Use, Mode, Technology, Branding, Policy
- 8. Nearly there. Do you have any comments you would like to share with us?
  - a. (Fill in the blank)
- 9. Thanks. Please specify in which industry your organization works in?
  - a. (Fill in the blank)
- 10. Lastly, how many employees does your organization have?
  - a. 1-10
  - b. 11-50
  - c. 51 200
  - d. 201 500
  - e. 500+

### MINUTES: **Stakeholder meeting #1**

#### Call to Order:

A meeting with City of Doral and Gannett Fleming was held on Wednesday, March 20, 2019 from 9:00 AM to 11:00 AM at the City of Doral Government Center, Third Floor Training Room.

#### Attendees:

Attendees include Rita Carbonell (City of Doral), Shirley Forero (City of Doral), Jorge Gomez (City of Doral), Maria Tery Vilches (Miami-Dade Transportation Planning Organization), Carlos Cejas (Gannett Fleming), Ivan Jimenez (Gannett Fleming), and Edward Aparicio (Gannett Fleming) plus business stakeholders (see attached sign-in sheet).

#### Minutes:

The staekholder workshop began with a brief presentation of the study's scope and schedule, purpose for the meeting, and snippets of Doral's transportation network existing conditions. This presentation followed an open-floor discussion around five (5) points: Land Use, Mode, Technology, Branding, and Policy. Below is a summary of topics discussed for each of these points.

- Land Use:
  - Codina is developing most of Downtown Doral and they are supportive of non-motorized transportation and transit. The developer's main office is in Coral Gables by facility management and sales employees live and work in Doral. Over 65 employees work between Doral, Coral Gables, or are in the field.
  - Miami-Dade College West is updating its master plan. There is a large section of the West Campus that is an empty shell, and the college is looking to develop more of this campus to be integrated with businesses in the immediate vicinity. The campus does not have student housing. The cost of living in Doral is high for their student population, so the college is always looking for solutions.
  - Southern Command is planning on developing 160 acres across their campus for housing.

- <u>Mode:</u>
  - Walking and biking was discussed, and a lack of infrastructure was noted.
     Protected bicycle lanes in Doral are minimal and do not connect to transit stations.
  - FreeBee was discussed as a convenient mode of connecting short distances.
     The on-demand feature of FreeBee was celebrated.
  - The trolley is seen as a good mode of transportation because of its free fare and it reach to a lot of residential homes. Eventually the trolley would have to grow in scope – vehicle size and coverage.
  - Miami-Dade College West is now offering 4-year degrees which may result in an increased demand for transportation options to the campus.
- <u>Technology:</u>
  - The audience express doubt regarding driverless car completely improving the transportation system. Technology is considered most needed to improve travel and transfer times as well as reliability.
  - One attendee recommended improving the User Interface (UI) of mobile and web applications for the Trolley. Increasing the intuitive design can help attract more ridership and improve reliability.
- Branding
  - Codina proposed focusing on bus shelters. This infrastructure is a great focus for branding and sense of community given they can be practical and aesthetically pleasing. The current bus stops do not protect people from howling rains.
  - One attendee had participated in a project to redevelop the bus shelters for the City of Miami Beach. The design included ample shelter coverage, solar panels, and dynamic displays with route maps and games for kids.
  - Raising awareness of existing services was also proposed given some audience members did not know the trolley service was free until an opportune conversation with a coworker.
- <u>Policy</u>
  - Codina has attempted telecommuting and carpooling but these policies have been unsuccessful. Implementing these policies in Downtown Doral could a be possibility.

- Codina is interested in spearheading a TMA if other employers around Downtown Doral are willing to participate.
- Southern Command gets benefits from the federal government which pay for carpooling, Metrorail passes, vanpool opportunities, and other mobility options. Southern Command is unable to participate in TMA due to federal and state regulations.
- Miami-Dade College has some discount options for students, but other initiatives have not gelled that well.

### Meeting Minutes: **TOWN OF MEDLEY MEETING**

#### Call to Order:

A meeting with City of Doral, Town of Medley, and Gannett Fleming was held on Tuesday, April 9, 2019 from 11:00 AM to 12:15 PM at the City of Doral Government Center, Second Floor Conference Room.

#### Attendees:

Attendees include Rita Carbonell (City of Doral), Shirley Forero (City of Doral), Jorge Corzo (Town of Medley), Ivan Jimenez (Gannett Fleming), and Nelson Mora (Gannett Fleming)

#### Minutes:

The purpose of the meeting was to understand the ongoing transit efforts on behalf of the Town of Medley. Jorge Corzo, Town Engineer, discuss an existing paratransit service to the residents of the Medley Lakeside Retirement Park located in near NW 107<sup>th</sup> Avenue and NW 116<sup>th</sup> Way. The service typically takes elderly residents to shopping destinations in Hialeah Gardens. Medley uses all its CITT funding for this service which is approximately \$25,000.

In addition to this service, Medley recently complete a Multimodal Mobility Study which proposed a transit circulator. The Town is working on refining one of the proposed routes to begin operations soon. The route will be operated by Miami-Dade Department of Transportation and Public Works with 20-minute headways during peak periods and slower headways during off-peak periods. The new route will service the triangle form by SR 934/Hialeah Expressway, SR 826/Palmetto Expressway, and NW South River Dr. and connect to the Palmetto Metrorail Station. Medley will establish this pilot route with funds from an FDOT grant.

Additional points raised during the meeting but not fully discussed include:

- Proposed annexations by the City of Doral and Town of Medley.
- New roadway construction of NW 87<sup>th</sup> Avenue between NW 74<sup>th</sup> Street and NW 103<sup>rd</sup> Street in Medley. Refer to <u>http://www.fdotmiamidade.com/current-projects/north-miami-dade/nw-87-ave-from-nw-74-st-to-nw-103-st-1.html</u>
- Miami-Dade TPO is looking at a new north-south transit service between City of Doral and Town of Medley.

#### **Meeting with City of Sweetwater**

### Meeting Minutes: CITY OF SWEETWATER MEETING

#### Call to Order:

A meeting with City of Doral, City of Sweetwater, and Gannett Fleming was held on Wednesday, April 10, 2019 from 2:00 PM to 3:30 PM at Sweetwater City Hall, Second Floor Conference Room.

#### Attendees:

Attendees include Rita Carbonell (City of Doral), Shirley Forero (City of Doral), Robert Herrada (City of Sweetwater), Ivan Jimenez (Gannett Fleming), and Nelson Mora (Gannett Fleming)

#### Minutes:

The purpose of the meeting was to understand the ongoing transit efforts on behalf of the City of Sweetwater. Robert Herrada, Sweetwater Assistant City Manager, discussed the service and expected changes to the existing Sweetwater trolley route. The City operates its trolley as a flex service with no designated stops. Most residents using the trolley are elderly with principle destinations being Sedano's Supermarket, Walgreens and other pharmacies, and Dolphin Mall. The City owns two trolley vehicles and plans to acquire one additional vehicle. LSF operates Sweetwater's trolleys. The City wants to modify the route slightly to service Ikea and universities north of Dolphin Mall.

According to Mr. Herrada 25% of City residents work or go to school in Sweetwater. The City operates its transit system jointly with FIU through a non-profit organization which operates 6 cutaway vans between the Engineering Center and the Modesto A. Maidique campus. FIU uses Transloc to operate the GPS tracker for their vehicles and an in-house application called Informed Traveler Program App (ITPA) as their main user interface for trip planning and parking occupancy assistance. FIU students riding the trolley have often requested stops in Doral.

Mr. Herrada also discuss land use changes occurring in Sweetwater. As part of the University City vision for Sweetwater, several new developments have been recently completed, are planned or underway, including:

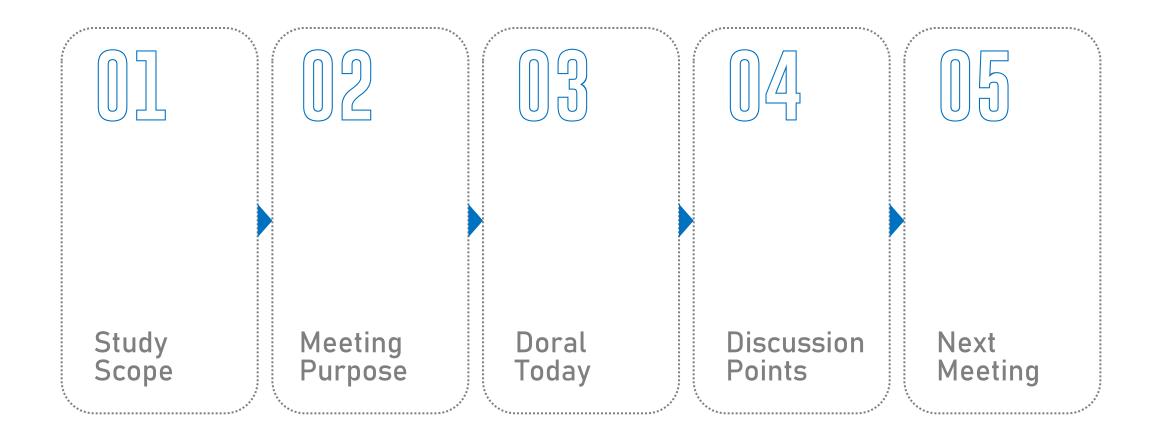

- 400 SW 107<sup>th</sup> Avenue Identity Miami, a 187-unit apartment building under construction
- 740 SW 109<sup>th</sup> Avenue University Bridge Residences, a 20-story 492-unit rental apartment building with a dedicated Transportation Network Company (TNC) stop
- 1401 NW 110<sup>th</sup> Avenue San Ignacio University, a planned eight-story building with capacity for 400 students and potential 139-room hotel and mixed-use project featuring 50,000 square feet of retail and office space
- Dolphin Professional Centre located on the southeast corner of NW 110<sup>th</sup> Avenue and NW 17<sup>th</sup> Street will have 54,000 SF of Class A offices and 26,000 SF of ground-floor retail
- Residences at Dolphin Citi Center located on the southwest corner of NW 108<sup>th</sup> Avenue and NW 17<sup>th</sup> Street will be an eight-story luxury building with 100 residential units and a retail promenade

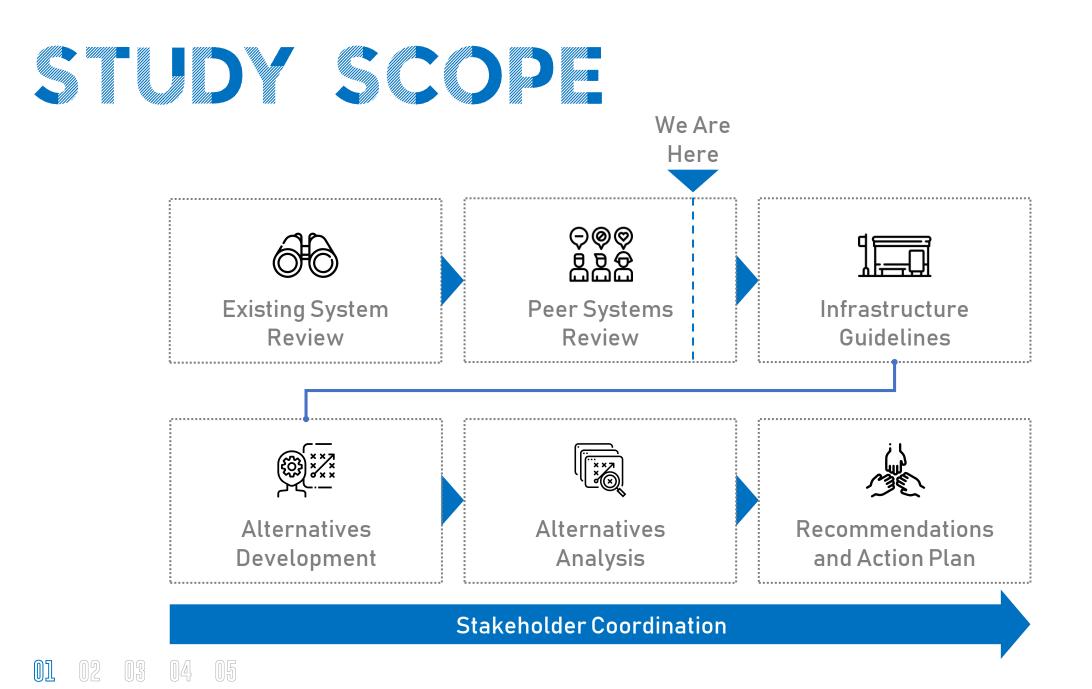

NW 109<sup>th</sup> Avenue is also intended to be the City's main corridor. The City wants to transform it into a Complete Street with bicycle/pedestrian plaza south of SW 6<sup>th</sup> Street. The City recently obtained a \$20,000.00 grant for landscaping along NW 109<sup>th</sup> Avenue.

## MINUTES:<br/> **PUBLIC WORKSHOP MEETING #1**

#### Call to Order:

A meeting with City of Doral and Gannett Fleming was held on Thursday, March 28, 2019 from 6:00 PM to 8:00 PM at the City of Doral Government Center, Third Floor Training Room.

#### Attendees:

Attendees include Rita Carbonell (City of Doral), Shirley Forero (City of Doral), Jorge Gomez (City of Doral), Maria Tery Vilches (Miami-Dade Transportation Planning Organization), Carlos Cejas (Gannett Fleming), Ivan Jimenez (Gannett Fleming), and Edward Aparicio (Gannett Fleming) plus citizens (see attached sign-in sheet).

#### Minutes:

The public workshop began with a brief presentation of the study's scope and schedule, purpose for the meeting, and snippets of Doral's transportation network existing conditions. This presentation followed an open-floor discussion around five (5) points: Land Use, Mode, Technology, Branding, and Policy. Below is a summary of topics discussed for each of these points.

- Land Use:
  - The audience expressed opposition to gated communities and multi-residential developments that prevent the transportation network from having a grid pattern and instead segregate the network by forming a clusters of loops pattern.
  - The audience expressed skepticism to the idea of land use pattern changing in the future. Most attendees believed development of gated communities will continue and existing gated communities will have legal protection against providing paths/roads to create a grid pattern transportation network.
- <u>Mode:</u>
  - A few members of the audience were in favor of prioritizing non-motorized modes of transportation, such as bicycling, but *most* attendees were in favor of prioritizing transit services.
  - Arguments against bicycle infrastructure investment included comfort and convenience issues due to weather/climate, safety issues to existing unsafe

bicycle facilities on auto-centric roadways, and connectivity issues due missing gaps in the bicycle network.

- Another argument raised against bicycle investments was a lack of will/culture for using this mode of transportation. This argument was supported by the fact that Spin, a private dockless bicycle/scooter rental company, failed to generate enough ridership to continue operations in the City.
- Most audience members expressed a need for better transit service to Metrorail and future premium transit services connecting to Downtown Miami. This need is due to most commuters traveling long to medium distances in an east-west direction. The audience express discontent with current travel times and frequencies of the trolley routes to the Palmetto Station.
- Similarly, most attendees agreed with a proposition of improving the service for students during peak periods; noting that commuters and students have different schedules and demands.
- Others expressed a need for more on-demand services such as Uber, Lyft, carsharing (Zipcar) or Personal Rapid Transit (PRT).
- Zip car was brought up to discuss as an alternative to owning a personal vehicle. Other rebuked this suggestion as creating more a of problem than a solution – more cars in the city, not less.
- Other modes, such as FreeBee, were considered positive supplements to the trolley service but maintaining and improving the trolley was express as the top priority. A possible solution could be to investigate a mixed fleet solution, with smaller vehicle used during low demand periods of the day, larger occupancy vehicles used during peak periods. Premium transit within Doral was envisioned as far away concept that will not be applicable for many years to come.
- <u>Technology:</u>
  - One attendee suggested partnering with Uber or Lyft to mine origindestination data. The idea behind this endeavor is to provide reliable public on-demand services or improve trolley service by making routes more flexible and geared towards individual trips.
  - One innovative idea offered was to display QR codes on trolley buses that direct mobile phone users to the City's trolley website or mobile application
  - Most attendees agreed that the existing mobile application is inaccurate in reporting ETA

- Automation of vehicles and signal priority were briefly discussed with a positive attitude. These technologies are needed efficiencies in the future.
- Some people expressed a need to focus on the 100,000 plus people that travel through the City daily but do not necessarily live in the City. Aside from providing mobility to citizens and transit-dependent people, an important travel market are workers commuting into the City.
- <u>Branding</u>
  - The FIU route was brought into question given its specialized service to students and the route going outside of the City boundaries. Attendees claimed FIU should support the trolley route in some manner. This route could incentivize students to rent and live in Doral.
  - More advertising of trolley services was recommended given many students or City outsiders do not know the trolley is free and all the destinations it connects.
  - A lunch route using a combination of FreeBee and Trolley was recommended. This route should be organized through employers, giving potential for cobranding.
  - Co-branding on trolley buses was seen as positive as long as advertisement on the buses is "clean and appropriate".
  - Attendees minimally discussed transit infrastructure. While some agreed poor infrastructure is a major impediment to using transit, most agreed the City should focus on the reliability of the trolleys; making sure proper frequencies are provided at peak times.
  - East-West connections we need more improvement along 25th and 58th street to be able to move cars east-west of Doral. Getting out int the morning from Doral, it takes forever. 97th Ave and 58th Street needs improvement. Widening appears to be occurring at this intersection. 25th and 58th Street is a major concern to move east-west, possibly dedicated lanes/queue jumping.
- <u>Policy</u>
  - Most audience members understood land use is the guiding policy behind transportation demand. They want to see results and not more studies.
  - While most people disagreed with gated communities, some also expressed dislike for high-rises and mixed-used development. These sentiments are guided by a desire to improve the existing transportation network while maintaining Doral's suburban environment.

- When can we see action after this study? How long? Much of the action is determined by acquired funding through various sources such as the Half Penny Tax.
- People were very enthusiastic about getting more businesses involved with this study and making businesses aware of their potential benefits from the outcomes of this study.

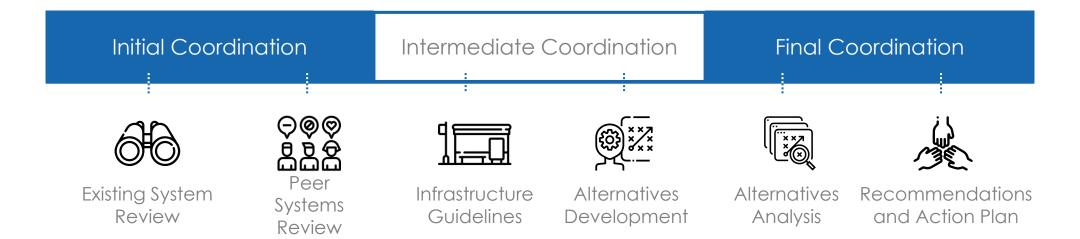

### AGENDA

	02	03	04	05
Study	Meeting	Alternative	Alternative	Additional
Scope	Purpose	Routes	Services	Options

## **STUDY SCOPE**

### **MEETING PURPOSE**

We want to gather your feedback on alternatives developed to solve existing and future needs of the Doral Trolley.

> Which alternative(s) do you prefer? Which service(s) do you prefer? Do you have other recommendations?

# ALTERNATIVE ROUTES

## METHODOLOGY

#### Four distinct route networks = alternatives were created by:

- **b** Modifying existing routes to connect new developments
- 2 Consolidating existing routes to form new connections
- 3
- Developing new routes to connect to a central hub
- Reimagining a grid of routes that connects the entire City

- = "MISSING LINK" alternative
- = "ONE SEAT RIDE" alternative
- = "HUB & SPOKE" alternative
- = "THE GRID" alternative

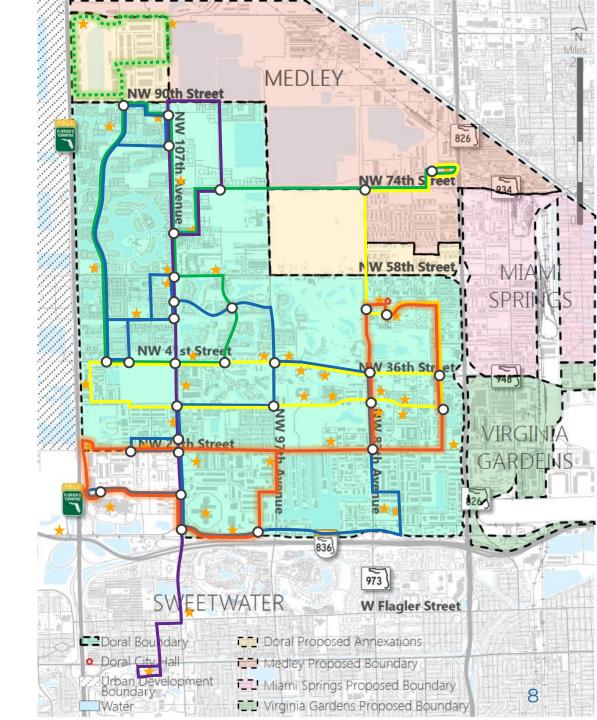

2 Connects new developments

### MISSING LINK alternative

### **ONE SEAT RIDE** alternative

More in-motion time, less wait time

2 Easier for riders to memorize routes

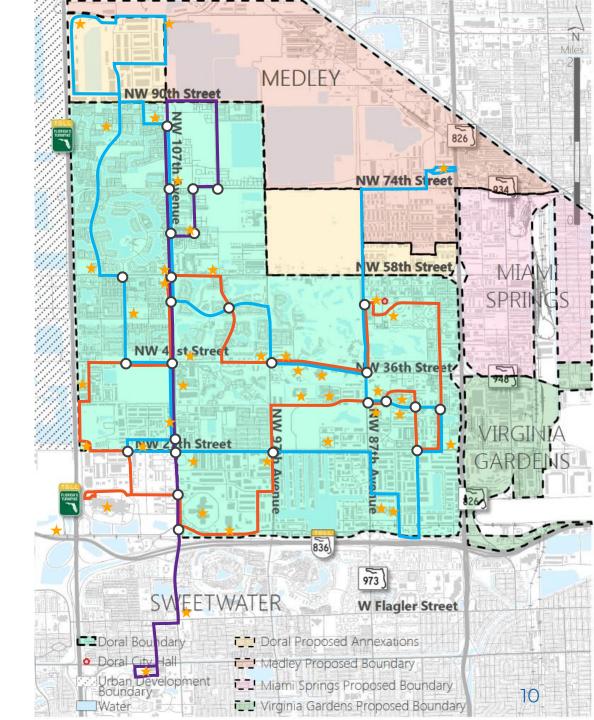

No major transfers required

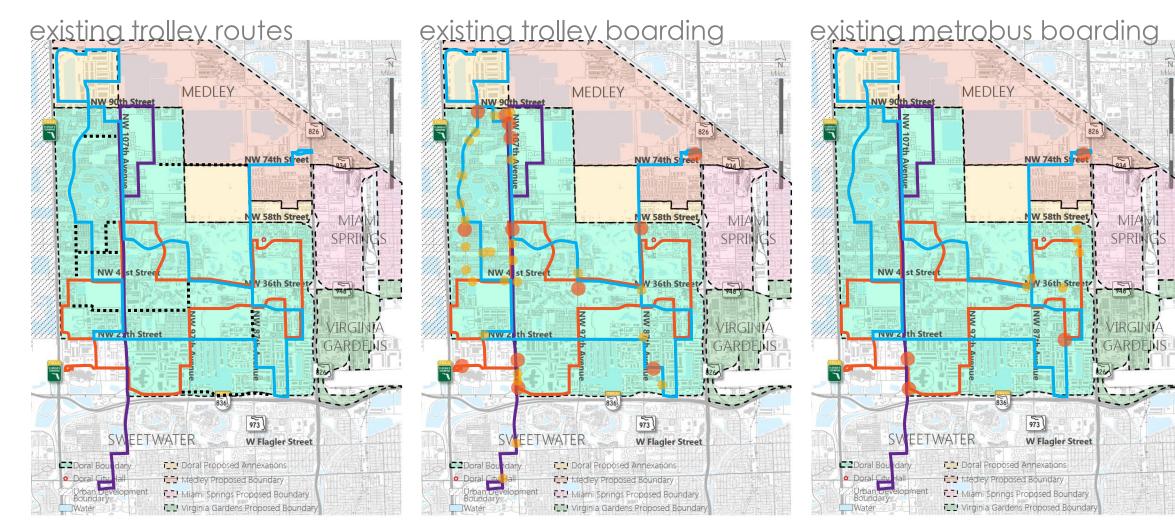

### **ONE SEAT RIDE** alternative

### How "One Seat Ride" compares...

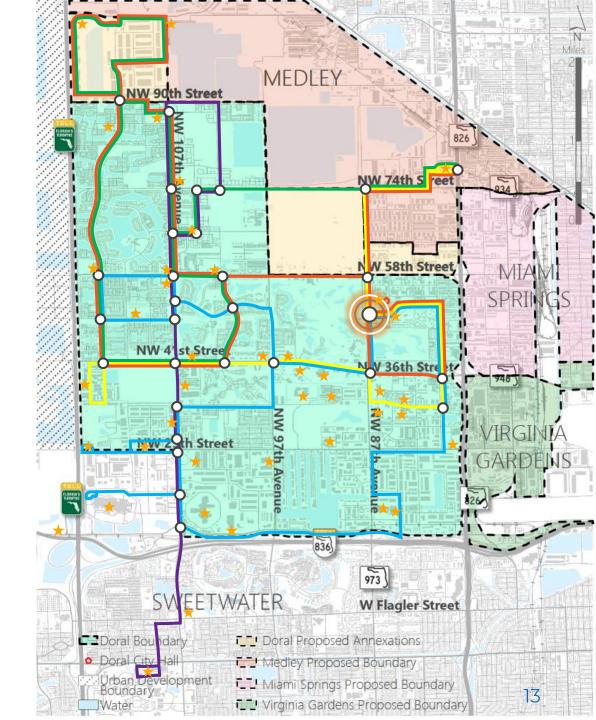

### HUB & SPOKE alternative

- More connections, with a single transfer
- Highly active and practical transfer point
- **3** Good connectivity to regional transit

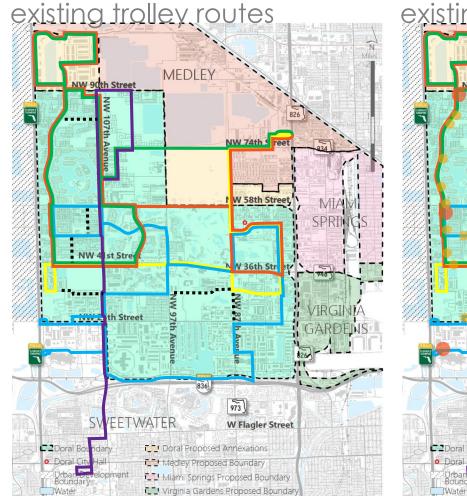

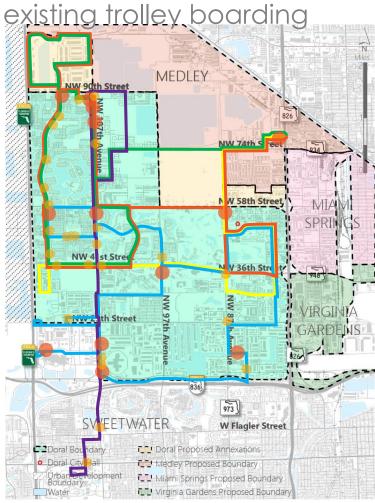

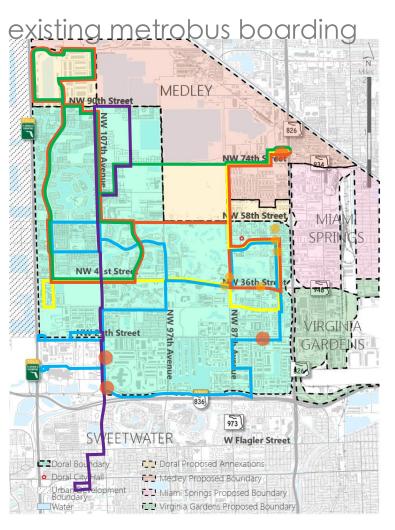

## How "Hub & Spoke" compares...

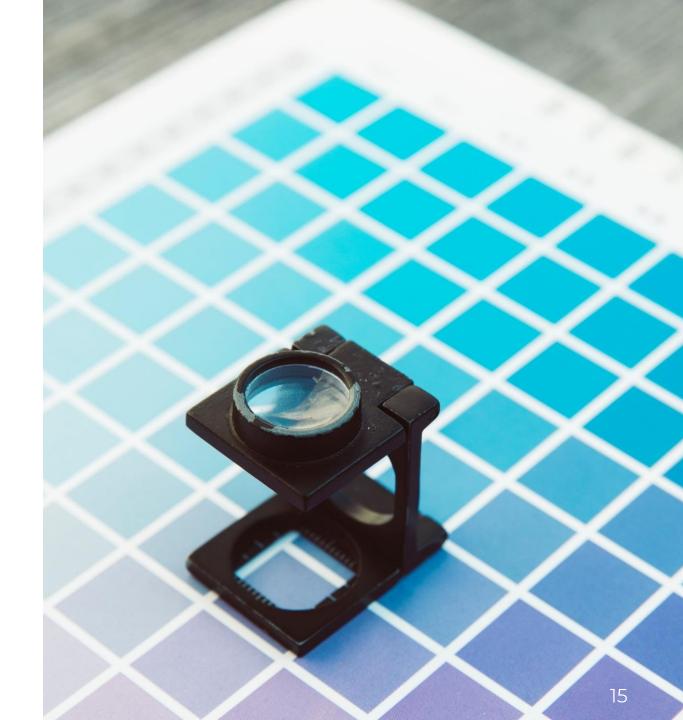

**b** Full coverage, with a single transfer

**2** Focused on high activity corridors

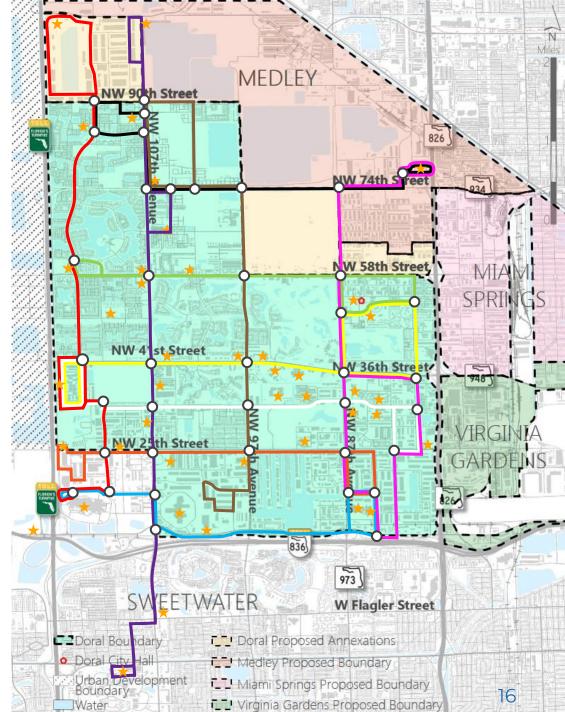

Reliable and intuitive routes

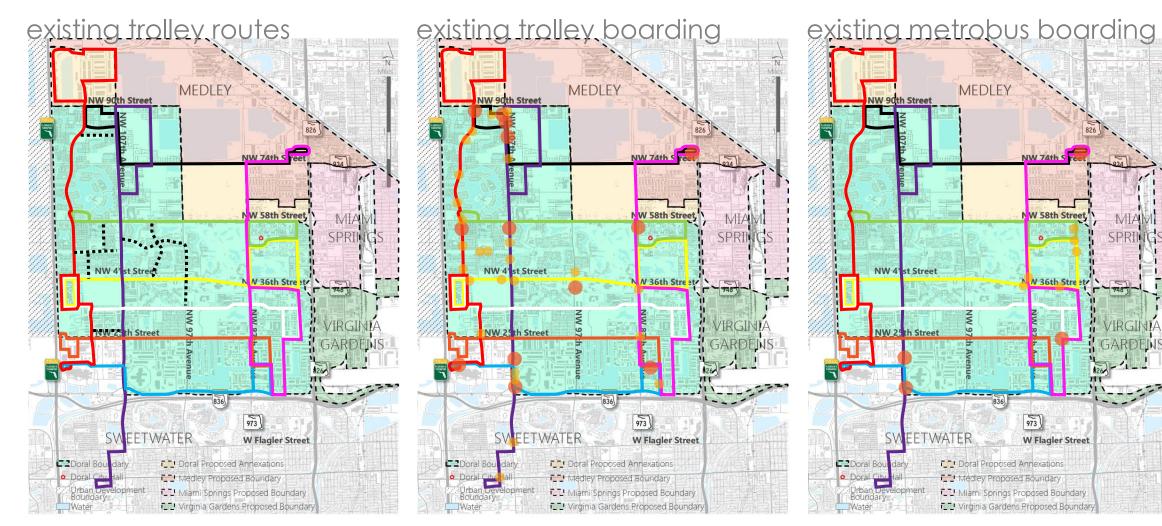

### THE GRID alternative

## How the grid compares...

**b** Tries to combine the most useful traits

Balances coverage and ridership

## ALTERNATIVE SERVICES

# ADDITIONAL OPTIONS

### integrating TRACKING APPS

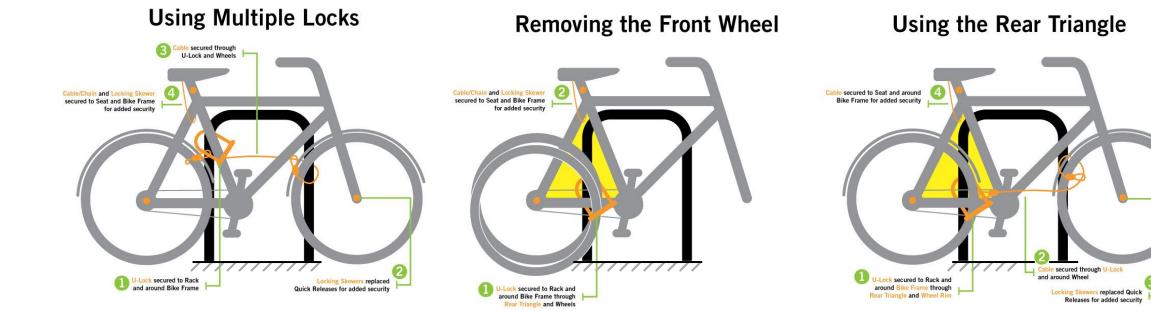

Separate systems can lead to...

commuters frustrated for missing Metrorail, or...

riders unaware of other mobility options.

# providing BICYCLE PARKING

Concrete embedded U-Racks are the most secure bicycle racks because they accommodate:

# adding **PEDESTRIAN LIGHTING**

Improves passenger safety and security...

provides opportunity to enhance stop aesthetics...

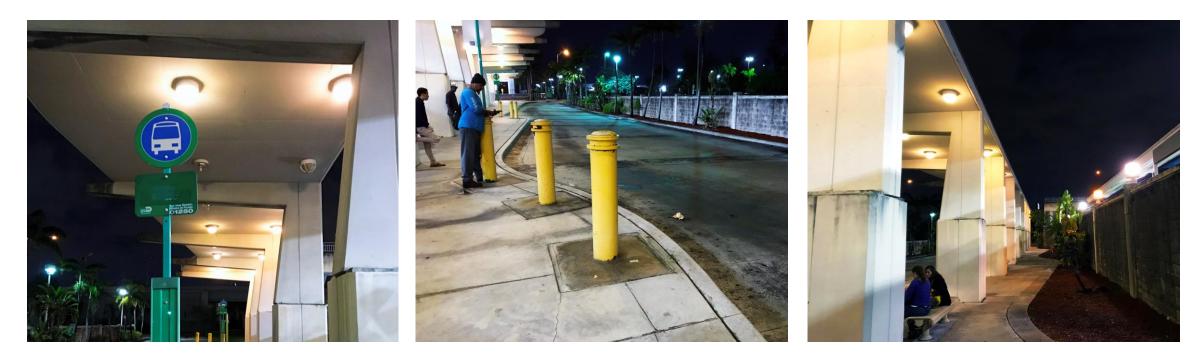

and can enhance s... wayfinding and contribute to placemaking.

# developing a new centralized **TROLLEY & BUS TERMINAL**

A centralized bus terminal can create a community center rich with... culture and activity, and with sense of safety and security. It also provides opportunities for mixed development.

# improving PALMETTO STATION

This hub needs improved lighting, wayfinding,...

improved ADA facilities and security features,...

and improved protection from the elements.

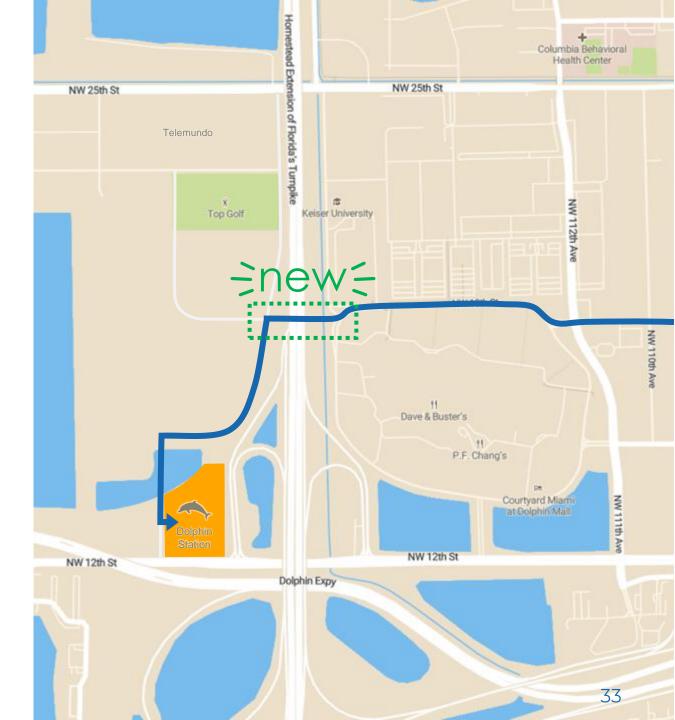

# replacing the **EXISTING FLEET** with vehicles that offer

Improved comfortability and accessibility

City unique design and branding

# connecting to **DOLPHIN STATION**

...provides access to

East-West Corridor (SMART Plan Corridor)

### connecting to **DOLPHIN STATION**

## MINUTES: **STAKEHOLDER MEETING #2**

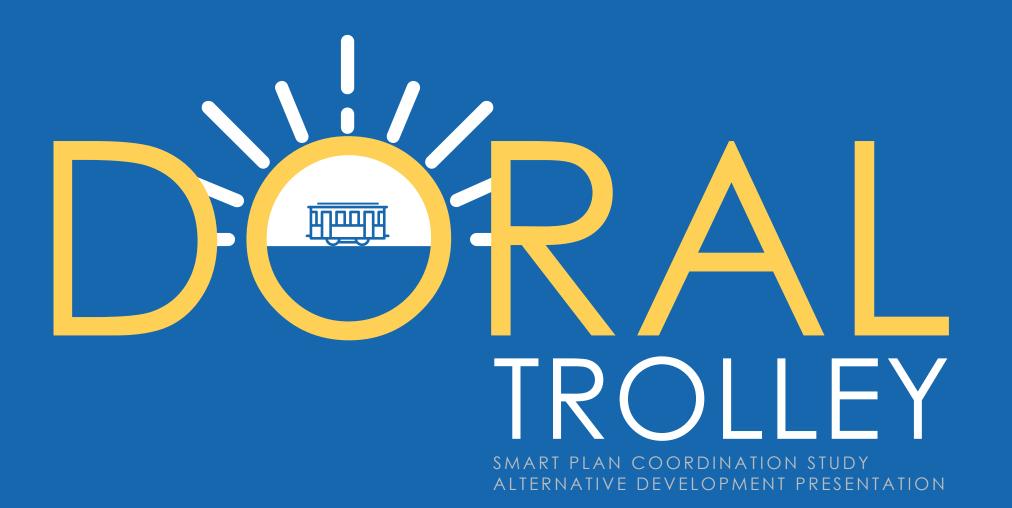

#### Call to Order:

A meeting with City of Doral and Gannett Fleming was held on Wednesday, June 19, 2019 from 10:00 AM to 12:00 PM at the City of Doral Government Center, Third Floor Training Room.

#### Minutes:

The stakeholder workshop began with a brief presentation of different proposed alternative routes, service options, and other recommendations. Viewers were also informed of an online survey to cast their votes on their preferred alternative and service option. The survey results and attendance list are attached to this document. The following notes/comments were record as express by representatives of attending businesses and organizations.

- One attendee wanted to ensure a connection to the "Our Lady of Guadalupe" religious center is provided on the recommended route. This religious center should be served during the weekends, specifically Sundays.
  - All alternative routes presented provide a connection to the religious center in reference. Sunday service will be accommodated for this destination.
- One attendee inquired about the Dolphin Station and whether the trolley will access this terminal in the future.
  - All alternative routes presented, and the existing system, connect to Dolphin Mall as an interim condition until the Dolphin Station begins operating.
- One attendee called attention to the new "Downtown Doral Charter Upper School" currently under development at the corner of NW 79<sup>th</sup> Avenue and NW 53<sup>rd</sup> Street.
- Attendees responded positively to the Hub & Spoke route alternative, fixed service options, and modifying DTPW Route 126 as proposed
- Attendees had mixed reactions to the idea of a transit terminal in Downtown Doral. Some worried about the terminal's cost due to high-value limited real estate in Downtown Doral, others worried about congestion in this area, and others view the central stop/terminal as a good mobility option for the new middle/high school.

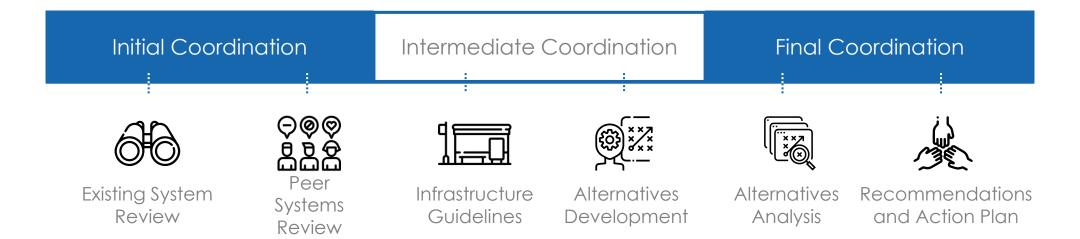

### AGENDA

## ADDITIONAL OPTIONS

### integrating TRACKING APPS

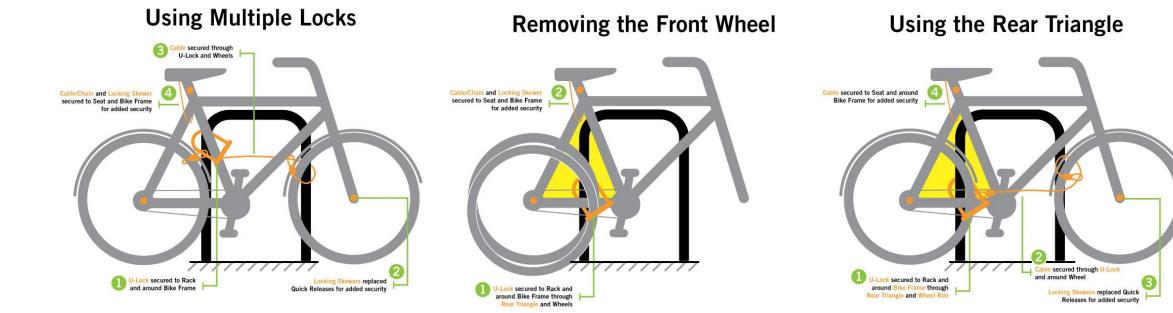

Separate systems can lead to...

commuters frustrated for missing Metrorail, or...

riders unaware of other mobility options.

# providing BICYCLE PARKING

Concrete embedded U-Racks are the most secure bicycle racks because they accommodate:

## adding **PEDESTRIAN LIGHTING**

Improves passenger safety and security...

provides opportunity to enhance stop aesthetics...

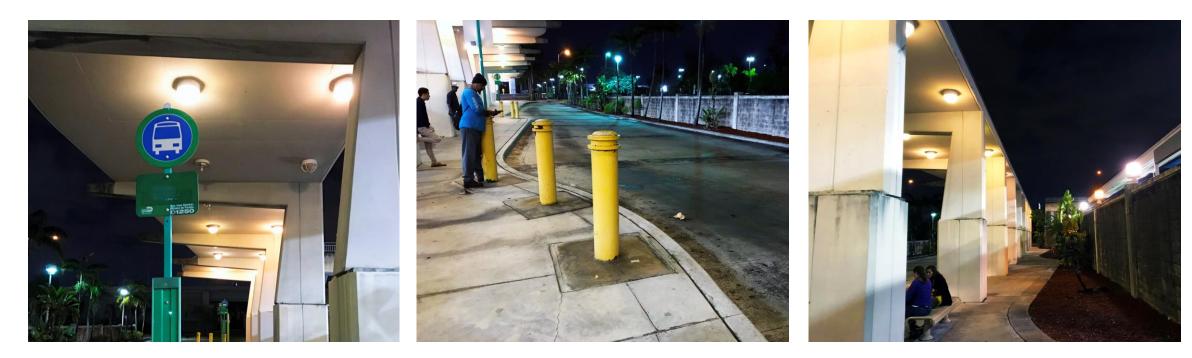

and can enhance wayfinding and contribute to placemaking.

# developing a new centralized **TROLLEY & BUS TERMINAL**

A centralized bus terminal can create a community center rich with... culture and activity, and with sense of safety and security. It also provides opportunities for mixed development.

## improving PALMETTO STATION

This hub needs improved lighting, wayfinding,...

improved ADA facilities and security features,...

and improved protection from the elements.

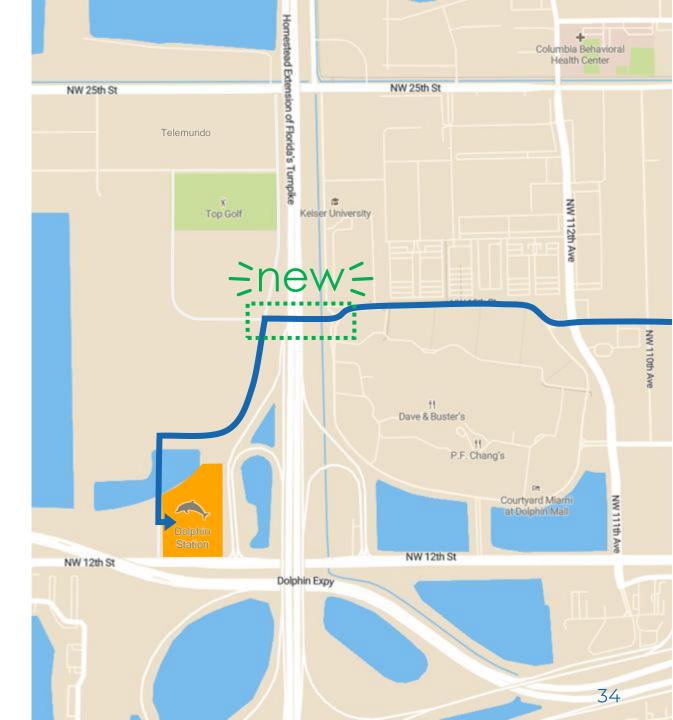

# replacing the **EXISTING FLEET** with vehicles that offer

Improved comfortability and accessibility

City unique design and branding

# connecting to **DOLPHIN STATION**

...provides access to

East-West Corridor (SMART Plan Corridor)

DTPW Local Routes 7, 36, 71, 137, 238, and 338

### connecting to **DOLPHIN STATION**

### **NEXT MEETING**

#### **Doral Trolley/SMART Plan Study**

#### Public Workshop Meeting #2

#### MINUTES: **PUBLIC WORKSHOP #2**

#### Call to Order:

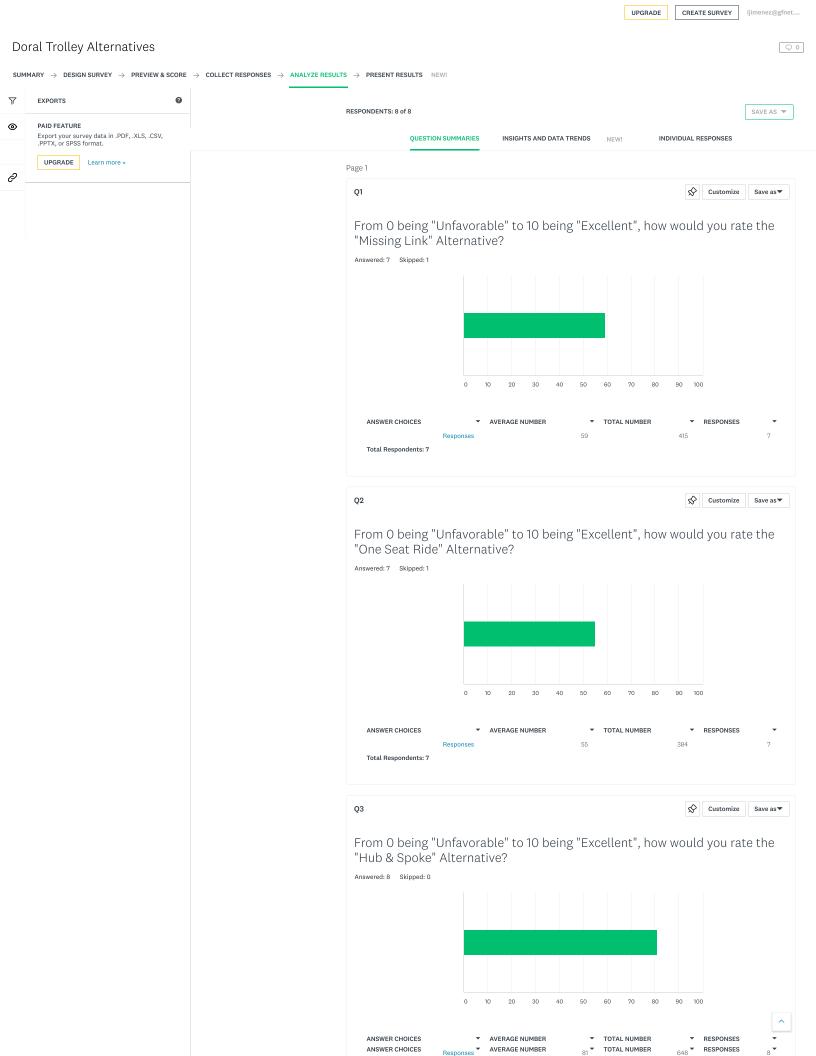

A meeting with City of Doral and Gannett Fleming was held on Wednesday, June 19, 2019 from 6:00 PM to 10:00 PM at the City of Doral Government Center, Third Floor Training Room.

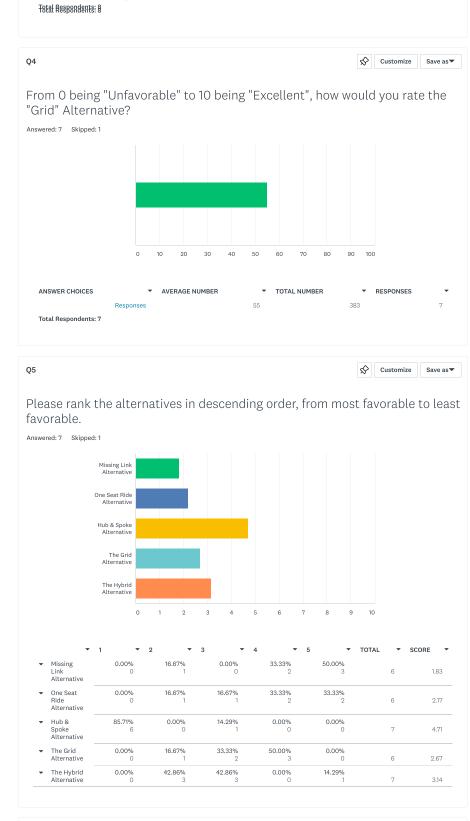

#### Minutes:

The stakeholder workshop began with a brief presentation of different proposed alternative routes, service options, and other recommendations. Viewers were also informed of an online survey to cast their votes on their preferred alternative and service option. The survey results and attendance list are attached to this document. The following notes/comments were record as express by representatives of attending businesses and organizations.

- One attendee expressed his/her issue with the existing Route 1 is that it is too long, and he/she would like to see shorter routes
- Attendees complained about poor customer service on behalf of the trolley drivers (taking long layovers at gas stations [58<sup>th</sup> Street across Pepito's] and fast food restaurants) and unresponsive or inaccurate tracking application.
  - This attendee also mentioned that the trolley layover at FIU and Palmetto seem too long. If the trolleys are late, then they should shorten their layover.
- Three attendees expressed concern with the idea of a transit terminal in Downtown Doral. They suggested improving the Palmetto Station or developing a small terminal in the outskirts of Downtown, instead of developing a new facility in Doral where real estate is expensive and scarce and a lot of congestion.
- One attendee suggested having routes that divide the City in quadrants (NE, NW, SE, and SW) and overlap on major corridors
  - This attendee also suggested placing transfer stops on side streets and not major corridors
  - One disadvantage with this proposed alternative route is that the City is very segregated in terms of land use and most of the residential land use is in the northwestern area. Hence, residents would require several transfers travel between activity centers/land uses. Another disadvantage is that the City has one-mile blocks. If the proposed routes only loop around major corridors, potential riders in the center of the block will not be served by the trolley and may have inconvenient first/last mile connections.

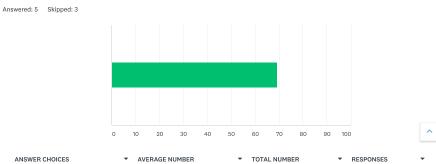

- One attendee brought to the attention of the team the need to connect to outpatient services such as University of Miami Health System Bariatric Center located on NW 35<sup>th</sup> Street and NW 82<sup>nd</sup> Avenue
- One attendee mention adding solar panels to the trolley vehicles and trolley stops
  - Some trolley shelters do have solar panels, however, the attendee pointed out that adding a sticker saying something like "Do you know I am solar" may be beneficial to highlight the investment
- One attendee suggested looking into adding a stop at the public library in Miami International Mall
- One attendee suggested keeping most of the proposed routes within the City boundaries and, when providing connections to terminals outside of the City, keeping those connects as direct as possible (i.e. north-south between the Dolphin Station and NW 25<sup>th</sup> Street as opposed to travelling on NW 12<sup>th</sup> Street or within the Dolphin Mall
- One attendee suggested implementing a text application where you text the stop number and receive a response text with the trolley ETA information
  - The City has this capability through existing contract with TSO Mobile but is not exercising this option due to operational budget constraints and other service issues with the vendor
- One attendee commented that the vehicles are unappealing, have poor energy efficiency, and are slow/inefficient
  - This attendee suggested purchasing new vehicles, such as the shuttles used by the City of Miami, and phasing their integration with the existing fleet
- One attendee mentioned that the trolley vehicles are not being washed before beginning operations everyday
- One attendee suggested consolidating bus stop locations
- One attendee suggested creating a new Hybrid Alternative between the "Hub & Spoke" and "The Grid" alternatives

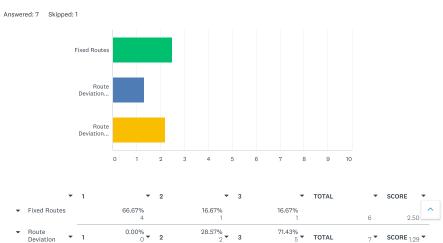

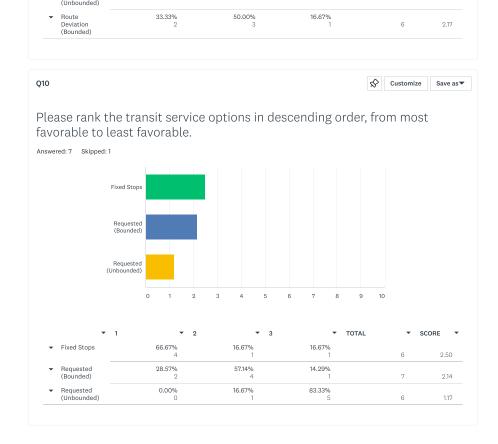

Q6

From 0 being "Not Important" to 10 being "Very Important", how would you rate having two-way service?

ASSUMES 52 SUNDAYS MINUS 2 HOLIDAYS FOR A TOTAL OF 50 SUNDAYS

CITY PROVIDED IT MAINTENCE COST OF \$194.89 FOR AVL, GPS, APC, Cameras, ACAS, and WIFI. COST ROUND TO \$195 IN FORMULA.

TWO-WAY ROUTES REDUCE TRAVEL TIME IN ONE DIRECTION. USING THE 1:3 RULE, TRAVEL TIME WAS CALCULTED TO BE REDUCED BY APPROXIMATELY 60%, SIGNIFYING A 180% RIDERSHIP INCREASE. ORANGE ROUTE ASSUMED TO BE AVERAGE OF EXISTING ROUTE 1/BLUE AND ROUTE 2/YELLOW

DATA FOR EXISTING ROUTE 2/YELLOW WAS NEED TO COMPUTE ORANGE ROUTE. A HYPOTHETICAL ROUTE 2/YELLOW SUNDAY SERVICE WAS CALCULATED BY PROPORTIONALLY REDUCING THE SATURDAY AND SUNDAY RIDERSHIP. THE HEADWAY FOR THIS HYPOTHETICAL ROUTE WAS ALSO INCREASE TO MATCH THAT OF THE ROUTE 1/BLUE SUNDAY SERVICE.

CITY PROVIDED IT MAINTENCE COST OF \$194.89 FOR AVL, GPS, APC, Cameras, ACAS, and WIFI. COST ROUND TO \$195 IN FORMULA.

TWO-WAY ROUTES REDUCE TRAVEL TIME IN ONE DIRECTION. USING THE 1:3 RULE, TRAVEL TIME WAS CALCULTED TO BE REDUCED BY APPROXIMATELY 60%, SIGNIFYING A 180% RIDERSHIP INCREASE. ORANGE ROUTE ASSUMED TO BE AVERAGE OF EXISTING ROUTE 1/BLUE AND ROUTE 2/YELLOW

ALL PROPOSED ROUTES ASSUMED TO BE ONE-WAY
