Publication of this document was financed  
in part by appropriations from the U.S.  
Department of Transportation, Urban Mass  
Transportation Administration, and the  
Federal Highway Administration, as well  
as the Florida Department of Transportation  
and Metropolitan Dade County, Florida.

METROPOLITAN PLANNING ORGANIZATION  
FOR  
MIAMI URBANIZED AREA

TRANSPORTATION IMPROVEMENT PROGRAM  
FY'79

**PURPOSE** This document has been prepared in fulfillment of the requirements of the U.S. Department of Transportation which provide that as a condition precedent to the receipt of federal funding for transportation planning, capital assistance or operating assistance funds, each urbanized area will have a continuing planning process that results in plans and programs consistent with the comprehensively planning development of the urbanized area. This document programs the projects which serve that purpose. Additionally, the priorities established by this document express the policy decision of the MPO as to the order in which transportation improvements will be advanced during the program period. The document also fulfills the Federal requirements for specification and explanation of the improvements recommended from the Long Range Element and the Transportation Systems Management Element for inclusion in the program.

**COMPREHENSIVE DEVELOPMENT MASTER PLAN** The FY'79 Transportation Improvement Program as set forth in this document is consistent with the Comprehensive Development Master Plan for Dade County adopted by Ordinance 75-22 dated March 31, 1975 which provides that its policy with respect to transportation is to "Provide access to employment and the facilities and services of the entire Metropolitan area; plan for mobility, opportunity, variety, energy conservation and minimum travel times and costs, safety, comfort and convenience while traveling and provide for efficiency, economy and a balanced, integrated transportation system within Dade County without detracting from the quality of life of the community." The goals set forth in support of that policy are:

Public or mass transportation should be given top priority as a positive tool to support and improve the viability of the County and the region.

Provide a system of transportation facilities which will anticipate the need for the movement of people and storage of goods and vehicles.

Coordinate and integrate the County transportation facilities with surrounding activities so that these facilities contribute to the enrichment of the physical environment of Dade County.

Transportation facilities should be planned and designed to conserve energy and other natural resources and existing man-made facilities and to reduce the total need for new public investment. Develop within a reasonable radius of rapid transit terminals should be considered as having county-wide impact and managed consistent with overall county-wide goals.

**TRANSPORTATION PLAN** Projects from both the Long Range Element and the Transportation Systems Management (TSM) Element of the Transportation Plan (TP) have been included for advancement during this program period.

The Long Range projects which have been included in the TIP are those related to the design, construction, and equipping of Stage I of the rapid transit system as approved by UMTA, the Downtown People Mover project, arterial and secondary street' improvements, aviation facilities and additional surface transit expansion improvements.

The TSM projects which have been included serve to introduce a better balance between additional fixed facilities and improvements to transportation service which can provide benefits in the very short term. UMTA Section 3 and 5 funds, and Federal-Aid Highway funds will be utilized to provide: Reserved lanes to give preferential treatment for transit and other high occupancy vehicles; service improvements to the surface transit system, and special projects for the elderly and handicapped. Additionally, Dade County's Secondary Road Program and the Decade of Progress Arterial Road program, both of which are non-federally funded, contain projects which are supportive of the TSM effort. These include traffic signal improvements, landscaping in median strips, lighting safety equipment projects and other related projects which provide for greater safety and better management and control of traffic flow.

PROJECT PROGRAMMING The transportation planning process developed by the Miami urbanized area's Metropolitan Planning Organization (MPO) is directed toward establishing an overall framework for relating long and short term transportation plans to the area's comprehensive development plan. Projects were programmed which favored the use of traffic management and operational techniques to improve system efficiency, conserve energy, improve air quality, and reduce the excessive use of automobiles. Additionally, projects were included which would encourage the use of mass transit service. The TIP projects of previous years were utilized to develop and support these concepts. TSM strategies and activities have been funded to accomplish the above goals.

This FY'79 TIP is consistent with the thrust of the joint FHWA/UMTA rules and regulations promulgated on September 17, 1975. It is also in concert with the supplementary guidelines on the development of the Transportation System Management Element contained in that document.

PROGRAM FUNDING The TIP categorizes all transportation improvements and identifies priorities which establishes fiscal programming for a three or more year period. It was developed from long range and staged elements of the Transportation Plan. The annual element represents the list of projects which are proposed for implementation during the program year and is viewed as the "capital improvements" budget for transportation facilities as well as a partial operating budget with respect to utilization of UMTA Section 5 monies.

This TIP document identifies all sources of funding which are known or anticipated to be available during the program period and is consistent with current estimates. Priorities in the program are identified by relative staging of projects for implementation during a particular year, consistent with amount of funding expected to be available.

The annual element may be amended at any time during a program year by the same procedures required for developing and adopting the original program. The amendment(s) may be for the purpose of rescinding projects, adding projects, revising the funding of a project, or modifying a project.

SUMMARY OF PROJECTS The projects in the FY'79 TIP covering the current fiscal year and four subsequent years have been grouped in nine major categories with an order of priority established within each category insofar as possible or applicable. Essentially, the groupings are established by virtue of funding source and implementing responsibility. As an example, traffic control system projects may be included under both Primary and Secondary projects. The major categories are:

- Primary Roads
- Interstate Highways
- Turnpike
- Dade County Secondary Road Program
- Decade of Progress Arterial Roads
- Community Development
- Airport Improvements
- Rapid Transit Improvements
- Surface Transit Improvements

The Table on page 3 is a consolidated summary of all categories by program year. The Table shows the amount by category and its percentage of the total transportation program which it represents. The thrust of Dade County's effort to achieve a balanced transportation system, to meet energy conservation needs, as well as to preserve or enhance the physical and social environment of the community, is evident when it is noted that approximately 71% of the FY'79 program budget is devoted to rapid and surface transit projects. It should also be noted that Primary/Interstate/Turnpike categories combined constitute only 4% of the approximately quarter billion dollar FY'79 program budget.

#### Conformance with Plan

The MPO is now in process of developing a Year 2000 Update to the Transportation Plan. Some projects may be noted as not in conformance. This relates to non-conformance with the "1985 MUATS Plan with Controversial Expressways Removed". It is anticipated that such projects will be in conformance with the completed Year 2000 Plan.

NOTE: All money amounts in this document represent thousands of dollars.

TRANSPORTATION IMPROVEMENT PROGRAM
